*Re-viewing Fascism* Jacqueline Reich,Piero Garofalo,2002-05-07 When Benito Mussolini proclaimed that Cinema is the strongest weapon, he was telling only half the story. In reality, very few feature films during the Fascist period can be labeled as propaganda. Re-viewing Fascism considers the many films that failed as weapons in creating cultural consensus and instead came to reflect the complexities and contradictions of Fascist culture. The volume also examines the connection between cinema

of the Fascist period and neorealism—ties that many scholars previously had denied in an attempt to view Fascism as an unfortunate deviation in Italian history. The postwar directors Luchino Visconti, Roberto Rossellini, and Vittorio de Sica all had important roots in the Fascist era, as did the Venice Film Festival. While government censorship loomed over Italian filmmaking, it did not prevent frank depictions of sexuality and representations of men and women that challenged official gender policies. Re-viewing Fascism brings together scholars from different cultural and disciplinary backgrounds as it offers an engaging and innovative look into Italian cinema, Fascist culture, and society.

Italian Fascism's Empire Cinema Ruth Ben-Ghiat, 2015-02-11 Ruth Ben-Ghiat provides the first in-depth study of feature and documentary films produced under the auspices of Mussolini's government that took as their subjects or settings Italy's African and Balkan colonies. These empire films were Italy's entry into an international market for the exotic. The films engaged its most experienced and cosmopolitan directors (Augusto Genina, Mario Camerini) as well as new filmmakers (Roberto Rossellini) who would make their marks in the postwar years. Ben-Ghiat sees these films as part of the aesthetic development that would lead to neo-realism. Shot in Libya, Somalia, and Ethiopia, these movies reinforced Fascist racial and labor policies and were largely forgotten after the war. Ben-Ghiat restores them to Italian and international film history in this gripping account of empire, war, and the cinema of dictatorship.

To the animals of Lodge Farm, the woods are a forbidden place filled with danger and uncertainty. For the wild animals in the forest, the farm is just as frightening, because Man lives there. The two worlds are next to one another, but couldn't be further apart. When the groups, tame and wild, begin to interact, each begins to question how life would be different on the other side. Manni the donkey ventures into the forest for an adventure, while a doe and her two fawns seek the safety of the barn when poachers threaten them in the woods. Will the animals choose to stay in their new lives? Or will the call of home be too great?

*Biomedical Photonics for Diabetes Research* Andrey Dunaev, Valery Tuchin, 2022-10-26 In 2021, over 537 million people worldwide were diagnosed with diabetes, according to the International Diabetes Federation and so the diagnosis, care and treatment of patients with diabetes mellitus have become one of the highest healthcare priorities. Biomedical photonics methods have been found to significantly improve and assist in the diagnosis of various disorders and complications arising from diabetes. These methods have also been widely used in various studies in the field of diabetes, including in the assessment of biochemical characteristics, metabolic processes, and microcirculation that are impaired in this disease. This book provides an introduction to methods of biomedical photonics. The chapters, written by world-leading experts, cover a wide range of issues, including the theoretical basis of different biophotonics methods and practical issues concerning the conduction of experimental studies to diagnose disorders associated with diabetes. It provides a comprehensive summary of the recent advances in biomedical optics and photonics in the study of diabetes and related complications. This book will be of interest to biomedical physicists and researchers, in addition to practicing doctors and endocrinologists looking to explore new instrumental methods for monitoring the effectiveness of patient treatment. Features • The first collective book combining accumulated knowledge and experience in the field of diabetes research using biophotonics. • Contributions from leading experts in the field. • Combines the theoretical base of the described methods and approaches, as well as providing valuable practical guidance and the latest research from experimental studies.

**Convergence in Biophotonics** B.C. Wilson, V.V. Tuchin, S. Tanev, 2005-11-15 The field of biophotonics is rapidly emerging in both academia and industry. It is the convergence of photonics and life sciences. Photonics – the science and technology of light generation, manipulation and measurement – has itself seen a remarkable expansion in the past 20 years, both in research and in commercialization, particularly in telecommunications. The life sciences have an increasing need for new technologies to which photonics can make significant contributions. As biology and medicine move into the post-genomics era, it is increasingly important to have highly sensitive tools for probing cells, tissues and whole organism structure and functions. Through photonic technologies optical fibers and sensitive imaging detectors, these measurements can often be done in a non- or minimally-invasive way, which is tremendously valuable for clinical and remote-sensing applications. In clinical medicine the ability to probe and image tissues is leading to a wide range of novel diagnostic methods; examples of these techniques are given in this book. Finally, the new field of nanotechnology is now penetrating into biophotonics. Examples include the use of nanoparticles such as metal nanospheres or rods and quantum dots for enhanced cell and tissue imaging and local light energy absorption. As will be evident, this volume is not intended as a comprehensive text on biophotonics. Rather, it presents ‘snapshots’ of some of the most exciting developments, from a perspective of photonic technologies, and life-sciences applications.

**Spanish National Cinema** Núria Triana-Toribio, 2003 Using accounts of films, film magazines and documents not readily available to an English-speaking audience, as well as case studies focusing on key issues, this volume explores the complex and changing relationship between cinema and Spanish national identity.

*The Optical Clearing Method* Luís Manuel Couto Oliveira,Valery Victorovich Tuchin,2019-11-27 This book describes the Optical Immersion Clearing method and its application to acquire information with importance for clinical practice and various fields of biomedical engineering. The method has proved to be a reliable means of increasing tissue transparency, allowing the investigator or surgeon to reach deeper tissue layers for improved imaging and laser surgery. This result is obtained by partial replacement of tissue water with an active optical clearing agent (OCA) that has a higher refractive index and is a better match for the refractive index of other tissue components. Natural tissue scattering is thereby reduced. An exponential increase in research using this method has occurred in recent years, and new applications have emerged, both in clinical practice and in some areas of biomedical engineering. Recent research has revealed that treating ex vivo tissues with solutions containing active OCAs in different concentrations produces experimental data to characterize drug delivery or to discriminate between normal and pathological tissues. The obtained drug diffusion properties are of interest for the pharmaceutical and organ preservation industry. Similar data can be estimated with particular interest for food preservation. The free water content evaluation is also of great interest since it facilitates the characterization of tissues to discriminate pathologies. An interesting new application that is presented in the book regards the creation of two optical windows in the ultraviolet spectral range through the application of the immersion method. These induced transparency windows open the possibility to diagnose and treat pathologies with ultraviolet light. This book presents photographs from the tissues we have studied and figures that represent the experimental setups used. Graphs and tables are also included to show the numerical results obtained in the sequential calculations performed.
