Architecture Design for Soft Errors Shubu Mukherjee,2011-08-29 Architecture Design for Soft Errors provides a comprehensive description of the architectural techniques to tackle the soft error problem. It covers the new methodologies for quantitative analysis of soft errors as well as novel, cost-effective architectural techniques to mitigate them. To provide readers with a better grasp of the broader problem definition and solution space, this book also delves into the physics of soft errors and reviews current circuit and software mitigation techniques. There are a number of different ways this book can be read or used in a course: as a complete course on architecture design for soft errors covering the entire book; a short course on architecture design for soft errors; and as a reference book on classical fault-tolerant machines. This book is recommended for practitioners in semi-conductor industry, researchers and developers in computer architecture, advanced graduate seminar courses on soft errors, and (iv) as a reference book for undergraduate courses in computer architecture. Helps readers build-in fault tolerance to the billions of microchips produced each year, all of which are subject to soft errors Shows readers how to quantify their soft error reliability Provides state-of-the-art techniques to protect against soft errors

**Wood-rotting non-gilled Agaricomycetes of Himalayas** I.B. Prasher,2015-06-09 The present volume by the author is based on the outcome of extensive explorations in the Himalayas for more than a decade. It incorporates the original research findings along with that based on literature survey. It is intended to provide a comprehensive account of an important group of fungi which has a direct bearing on wood industry and forest ecosystem besides commercial application in bioremediation and pollution control. It is the first step in providing the mycologists with consolidated, systematically up-to-date and illustrative monograph of wood-rotting fungi of Himalayas. Every year the students of the post graduate colleges and universities particularly Indian sub-continent go in for fungal forays to collect fungi which forms part of their course curriculum. This book will serve as a field manual for identification. The book has more than 240 color photographs and 123 plates of camera lucida drawings covering all the fungi which have been reported till-to-date from the study area.

*Himalayan Geology* ,2009

*Holy Himalaya* E. Sherman Oakley,1905

*Love and Honor in the Himalayas* Ernestine McHugh,2011-06-07 American anthropologist Ernestine McHugh arrived in the foothills of the Annapurna mountains in Nepal, and, surrounded by terraced fields, rushing streams, and rocky paths, she began one of several sojourns among the Gurung people whose ramro hawa-pani (good wind and water) not only describes the enduring bounty of their land but also reflects the climate of goodwill they seek to sustain in their community. It was in their steep Himalayan villages that McHugh came to know another culture, witnessing and learning the Buddhist appreciation for equanimity in moments of precious joy and inevitable sorrow. Love and Honor in the Himalayas is McHugh's gripping ethnographic memoir based on research among the Gurungs conducted over a span of fourteen years. As she chronicles the events of her fieldwork, she also tells a story that admits feeling and involvement, writing of the people who housed her in the terms in which they cast their relationship with her, that of family. Welcomed to call her host Ama and become a daughter in the household, McHugh engaged in a strong network of kin and friendship. She intimately describes, with a sure sense of comedy and pathos, the family's diverse experiences of life and loss, self and personhood, hope, knowledge, and affection. In mundane as well as dramatic rituals, the Gurungs ever emphasize the importance of love and honor in everyday life, regardless of circumstances, in all human relationships. Such was the lesson learned by McHugh, who arrived a young woman facing her own hardships and came to understand—and experience—the power of their ways of being. While it attends to a particular place and its inhabitants, Love and Honor in the Himalayas is, above all, about human possibility, about what people make of their lives. Through the compelling force of her narrative, McHugh lets her emotionally open fieldwork reveal insight into the privilege of joining a community and a culture. It is an invitation to sustain grace and kindness in the face of adversity, cultivate harmony and mutual support, and cherish life fully.

Geology of the Nepal Himalaya Megh Raj Dhital,2015-02-11 This book addresses the geology of the entire Himalayan range in Nepal, i.e., from the Gangetic plain in the south to the Tethyan zone in the north. Without a comprehensive look at the various Himalayan zones, it is practically impossible to fully grasp the processes at work behind the formation and development of the spectacular Himalaya. However, the goal is not merely to document all the scientific ontology but rather to reveal a sound basis for the prevailing concepts. Both the early literature on Himalayan geology and contemporary trends are fully covered. For the first time, the origin, use, and abuse of common Himalayan geological terms such as the Siwaliks, Lesser Himalaya, Main Boundary Thrust, Main Central Thrust, and Tethys are discussed. The book will help readers to progress from a cognitive approach to a constructive one by linking various types of knowledge, such as seeking relations between various geological structures as well as between earlier thoughts or views and contemporary approaches.

**No Place to Fall** Victor Saunders, 2013-03-14 No Place to Fall is Victor Saunders's follow up to his Boardman Tasker Prize winning debut book Elusive Summits. Covering three expeditions to familiar and unfamiliar ranges in Nepal, the Karakoram and the Kumaon, each shares the exhilaration of attempting new alpine-style routes on terrifyingly committing mountains. In 1989 Victor Saunders and Steve Sustad completed a difficult route on the West Face of Makalu II, only to be brought to a storm-bound halt above 7000 metres while descending. Without food or bivouac gear, they endured a tortuous descent after a night in the open. Two years later the pair were with a small team in the Hunza valley exploring elusive access to a giant hidden pillar on the unvisited South-East Face of Ultar, one of the highest and most shapely of the world's unclimbed peaks. Climbing at night to avoid being caught out by the torture of sun on ice, they were a few pitches from the summit ridge on soft snow and rotten ice before equipment failure committed them to a dire descent. In 1992 Victor Saunders was part of a joint Indian-British team climbing various peaks in the Panch Chuli range and exploring its approaches from the west. A happy and successful expedition narrowly avoided ending in tragedy when Stephen Venables broke both legs in a fall on the descent from Panch Chuli V and Chris Bonington survived another fall going to his aid. The dramatic evacuation of Venables, in which the author took a major part, forms an exciting climax to a book which describes at first hand what it is like on the cutting edge of contemporary alpine-style climbing in the world's highest mountains. As well as exciting climbing action, No Place to Fall offers enviable mountain exploration, enriched by sharing the lives of the mountain peoples along the way. Victor Saunders also casts a perceptive, if bemused, eye over his fellow climbers and reflects on the calculation of risk that drives them back year after year to chance their lives in high places.

Proceedings of Sixth International Conference on Soft Computing for Problem Solving Kusum Deep, Jagdish Chand Bansal, Kedar Nath Das, Arvind Kumar Lal, Harish Garg, Atulya K. Nagar, Millie Pant, 2017-04-12 This two-volume book gathers the proceedings of the Sixth International Conference on Soft Computing for Problem Solving (SocProS 2016), offering a collection of research papers presented during the conference at Thapar University, Patiala, India. Providing a veritable treasure trove for scientists and researchers working in the field of soft computing, it highlights the latest developments in the broad area of "Computational Intelligence" and explores both theoretical and practical aspects using fuzzy logic, artificial neural networks, evolutionary algorithms, swarm intelligence, soft computing, computational intelligence, etc.

**Crossing the Himalayas** Nian Peng, Ghulam Ali, Yi Zhang, 2021-10-27 This book aims to analyze two contrasting trends of integration and rivalry among great powers and regional states of Himalaya. It examines the interactions between the great powers and the small states in the Himalayan region, analyzes the multiple effects of the great power rivalry on the regional cooperation, and predicts the possible directions of the future of the geo-politics and geo-economy in the Himalayan region by incorporating the most recent developments. The main content of the book is divided into 11 parts. The Introduction briefly explains the aims and scope of this book. The following chapter focuses on the Buddhist ties between China and the Himalayan states in the past two millennia and its dual influence in the Himalayan region. The rest 9 chapters provide an in-depth analyses of the security dilemma between China and India, Indian perspectives on China-South Asian relations, Chinese perspectives on U.S. and Japan's engagement with South Asia and Indo-Myanmar relations, and Pakistan, Sri Lanka, Bangladesh and Nepal's responses to the regional integration and great power rivalry in the Himalayan region respectively. This is the first study which brings the Himalaya region at the center of geopolitical and geo-economics cooperation and rivalry thus highlighting its significance in Asian politics. It offers a comprehensive analysis of the complicated geo-political and geo-economic competition in the Himalayan region by inviting experts from both South Asia and China to contribute chapters. It also balances the west-centered views on the great power rivalry by introducing cultural perspective and small state perspective. The broad approach adopted in the book with focus on all important countries expands the scope of readership beyond specific academic community. The book will interest academics, policy makers, journalists, general reader and students of Asian politics.

The Formation of Mountains Florian Neukirchen, 2022-11-28 Mountains as we know them were formed by a wide range of processes. This vivid introduction explains the course of orogeny (mountain formation) and the resulting structures, the cycles of plate tectonics and the evolution of landforms. It also presents surprising findings from the latest research. Popular travel destinations are described in detail – ideal when preparing for a trip – while a wealth of photos and graphics illustrate the text. Why are mountains as tall as they are? How does high-pressure rock come to the surface? Is there feedback between tectonics and the climate? How can mountains form without continental collision, far away from any plate boundaries? And how do we know all this? These and many other questions will be answered.
