The Jan & Dean Record Mark A. Moore,2016-02-18 Jan & Dean were among the most successful artists of the late 1950s through the mid-1960s, with hits including Baby Talk, Surf City, Dead Man's Curve and The Little Old Lady (From Pasadena). Slapstick humor and offbeat personas were a big part of their shtick, but Jan Berry was serious when it came to the studio. This book chronicles Jan's career as a songwriter and arranger--and his tenure as producer for Jan & Dean and other acts--with day-by-day entries detailing recording sessions, single and album releases, concerts and appearances, film and television projects, behind-the-scenes business and legal matters, chart positions and more. Extensive commentary from Berry's family, friends and colleagues is included. Studio invoices, contract details, tape box notes, copyright information and other particulars shed light on how music was made in the Hollywood studio system of the 1960s.

The Role of Technology in Clinical Neuropsychology Robert L. Kane,Thomas D. Parsons,2017-03-24 Neuropsychology as a field has been slow to embrace and exploit the potential offered by technology to either make the assessment process more efficient or to develop new capabilities that augment the assessment of cognition. The Role of Technology in Clinical Neuropsychology details current efforts to use technology to enhance cognitive assessment with an emphasis on developing expanded capabilities for clinical assessment. The first sections of the book provide an overview of current approaches to computerized assessment along with newer technologies to assess behavior. The next series of chapters explores the use of novel technologies and approaches in cognitive assessment as they relate to developments in telemedicine, mobile health, and remote monitoring including developing smart environments. While still largely office-based, health care is increasingly moving out of the office with an increased emphasis on connecting patients with providers, and providers with other providers, remotely. Chapters also address the use of technology to enhance cognitive rehabilitation by implementing conceptually-based games to teach cognitive strategies and virtual environments to measure outcomes. Next, the chapters explore the use of virtual reality and scenario-based assessment to capture critical aspects of performance not assessed by traditional means and the implementation of neurobiological metrics to enhance patient assessment. Chapters also address the use of imaging to better define cognitive skills and assessment methods along with the integration of cognitive assessment with imaging to define the functioning of brain networks. The final section of the book discusses the ethical and methodological considerations needed for adopting advanced technologies for neuropsychological assessment. Authored by numerous leading figures in the field of neuropsychology, this volume emphasizes the critical role that virtual environments, neuroimaging, and data analytics will play as clinical neuropsychology moves forward in the future.

Biomedical Visualisation Scott Border,Paul M. Rea,Iain D. Keenan,2023-07-31 When studying medicine, healthcare, and medical sciences disciplines, learners are frequently required to visualise and understand complex three-dimensional concepts. Consequently, it is important that appropriate modalities are used to support their learning. Recently, educators have turned to new and existing digital visualisation approaches when adapting to pandemic-era challenges and when delivering blended post-pandemic teaching. This book focuses on a range of key themes in anatomical and clinically oriented education that can be enhanced through visual understanding of the spatial three-dimensional arrangement and structure of human patients. The opening chapters describe important digital adaptations for the dissemination of biomedical education to the public and to learners. These topics are followed by reviews and reports of specific modern visualisation technologies for supporting anatomical, biomedical sciences, and clinical education. Examples include 3D printing, 3D digital models, virtual histology, extended reality, and digital simulation. This book will be of interest to academics, educators, and communities aiming to modernise and innovate their teaching. Additionally, this book will appeal to clinical teachers and allied healthcare professionals who are responsible for the training and development of colleagues, and those wishing to communicate effectively to a range of audiences using multimodal digital approaches.
