**Advances in Edge Computing: Massive Parallel Processing and Applications** F. Xhafa,A.K. Sangaiah,2020-03-10 The rapid advance of Internet of Things (IoT) technologies has resulted in the number of IoT-connected devices growing exponentially, with billions of connected devices worldwide. While this development brings with it great opportunities for many fields of science, engineering, business and everyday life, it also presents challenges such as an architectural bottleneck – with a very large number of IoT devices connected to a rather small number of servers in Cloud data centers – and the problem of data deluge. Edge computing aims to alleviate the computational burden of the IoT for the Cloud by pushing some of the computations and logics of processing from the Cloud to the Edge of the Internet. It is becoming commonplace to allocate tasks and applications such as data filtering, classification, semantic enrichment and data aggregation to this layer, but to prevent this new layer from itself becoming another bottleneck for the whole computing stack from IoT to the Cloud, the Edge computing layer needs to be capable of implementing massively parallel and distributed algorithms efficiently. This book, *Advances in Edge Computing: Massive Parallel Processing and Applications*, addresses these challenges in 11 chapters. Subjects covered include: Fog storage software architecture; IoT-based crowdsourcing; the industrial Internet of Things; privacy issues; smart home management in the Cloud and the Fog; and a cloud robotic solution to assist medical applications. Providing an overview of developments in the field, the book will be of interest to all those working with the Internet of Things and Edge computing.

**My Smart Home for Seniors** Michael R. Miller,2017-06-19 Winner, Bronze Award, APEX 2018 and 2018 INDIES Book of the Year Honorable Mention/Health This full-color introduction to the smart home has been written from the ground up with one audience in mind: seniors. No ordinary beginner's book, *My Smart Home for Seniors* approaches every topic from a 50+ person's point of view, using meaningful, realistic examples. Full-color, step-by-step tasks-in legible print-walk you through making your home safer and easier to live in using smart technology. Learn how to: • Control your home's lighting with smart bulbs and switches • Make your home more secure with smart doorbells, door locks, and security cameras • Automatically control your home's temperature with a smart thermostat • Make cooking and cleaning easier with smart appliances • Use voice commands or your smart phone to control your smart devices • Use If This Then That (IFTTT) to make your smart devices interact with each other automatically • Get smart about the security and privacy concerns of smart devices • Set up your smart devices and get them to work with one another • Compare and select the best smart hub for your smart home needs • Learn to use Amazon Alexa™, Google Home™ and other voice-activated devices, as well as Apple's HomeKit™ on the iPhone, to make your smart devices work together

**App Development Recipes for iOS and watchOS** Molly K. Maskrey,2016-06-17 *App Development Recipes for iOS and watchOS* explores the technical side of app development with tips and tricks to avoid those little things that become big frustrations, outside of the realm of development, causing many people to throw up their hands and say “It's just not worth the hassle!” The experiential nature of this work sets it apart from other iOS and watchOS books. Even if you are a developer who is completely new to Swift, iOS or watchOS, you'll find the right experienced-based answers to important questions like “Why do I need version control?”, “Why is testing so important?” and more specific problems directly related to iOS and watchOS development with Swift. We discover and summarize the most common problems and derive the solutions; not just a short answer and screenshot, but a systematic, logical derivation, that is, how we got to the solution. /div After the introductory basics, each chapter delivers a problem statement and a solution. The experienced developer may, without losing anything, skip to whatever problem with which they are currently dealing. At the same time, we guide the less experienced developer through the process with focus on solving problems along the way. What you will learn: iOS career options for the new developer Working with Source Code and Version Control How to work with iOS accessory devices Understanding development methodologies such as Agile/Scrum User Experience Development and UI Tools Unit, UI, and Beta Testing Publishing your work Who this book is for:/div Developers who need to find specific solutions to common problems in developing apps for iOS and watchOS.

**Advanced Information Networking and Applications** Leonard Barolli,Makoto Takizawa,Fatos Xhafa,Tomoya Enokido,2019-03-14 The aim of the book is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications. Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This book covers the theory, design and applications of computer networks, distributed computing and information systems.

**Artificial Immune Systems** Hugues Bersini,2006-08-30 This book constitutes the refereed proceedings of the 5th International Conference on Artificial Immune Systems, ICARIS 2006. The book presents 34 revised full papers, are organized in topical sections on computer simulation of classical immunology, computer simulation of idiotypic network, immunoinformatics conceptual papers, pattern recognition type of application, optimization type of application, control and time-series type of application, danger theory inspired application, and text mining application.

**An Application Science for Multi-Agent Systems** Thomas A. Wagner,2006-04-11 *An Application Science For Multi-Agent Systems* addresses the complexity of choosing which multi-agent control technologies are appropriate for a given problem domain or a given application. Without such knowledge, when faced with a new application domain, agent developers must rely on past experience and intuition to determine whether a multi-agent system is the right approach, and if so, how to structure the agents, how to decompose the problem, and how to coordinate the activities of the agents, and so forth. This unique collection of contributions, written by leading international researchers in the agent community, provides valuable insight into the issues of deciding which technique to apply and when it is appropriate to use them. The contributions also discuss potential trade-offs or caveats involved with each decision. *An Application Science For Multi-Agent Systems* is an excellent reference for anyone involved in developing multi-agent systems.

**Facing Trauma in Contemporary American Literary Discourse** Laura Virginia Castor,2019-10-08 Trauma has always been part of the American collective experience, but only since September 11, 2001 has it been acknowledged on a widespread scale. Most people will experience some form of trauma during their lifetime, but in contemporary American culture, it is often understood as a problem to be blamed on someone, fought, or repressed entirely. Despite burgeoning trauma studies, popular responses to trauma – from the media to politics – produce ever more aggression and fear. This book responds to this growing awareness through literary analyses of texts by

Louise Erdrich, Siri Hustvedt, Melanie Thernstrom, Nicole Krauss, Joy Harjo, Linda Hogan, Jhumpa Lahiri, and Toni Morrison. Considered separately, each chapter provides a lens into a historically-situated trauma and the process of renegotiating it. Read together, they function as voices in an ongoing conversation that affirms the power of narrative. A good story can become a space for curiosity in the face of trauma and uncertainty. A story opens imaginative possibilities for asking, “in what ways can readers bring more awareness to the benefits of seeing our planetary interdependence in the midst of global polarization?” The readings of novels, autobiographical texts, and poems here suggest how this question is among the most valuable we can ask in the early 21st century.
