Clear Speech Frank Rudzicz,2016-03-14 Approximately 10% of North Americans have some communication disorder. These can be physical as in cerebral palsy and Parkinson's disease, cognitive as in Alzheimer's disease and dementia generally, or both physical and cognitive as in stroke. In fact, deteriorations in language are often the early hallmarks of broader diseases associated with older age, which is especially relevant since aging populations across many nations will result in a drastic increase in the prevalence of these types of disorders. A significant change to how healthcare is administered, brought on by these aging populations, will increase the workload of speech-language pathologists, therapists, and caregivers who are often already overloaded. Fortunately, modern speech technology, such as automatic speech recognition, has matured to the point where it can now have a profound positive impact on the lives of millions of people living with various types of disorders. This book serves as a common ground for two communities: clinical linguists (e.g., speech-language pathologists) and technologists (e.g., computer scientists). This book examines the neurological and physical causes of several speech disorders and their clinical effects, and demonstrates how modern technology can be used in practice to manage those effects and improve one's quality of life. This book is intended for a broad audience, from undergraduates to more senior researchers, as well as to users of these technologies and their therapists.

Prosody and Speech Recognition Alex Waibel,1988 Waibel, (computer science, Carnegie-Mellon U.), focuses on the prosodic cues (e.g., pitch, intensity, rhythm, temporal relationships, stress) that are critical to human speech perception. Speech and Language Therapy Myra Kersner,Jannet A. Wright,2013-03-01 Now in its second edition, Speech and Language Therapy: the decision-making process when working with children reveals how recent research and changes in health and education services have affected the decision-making process in the assessment and management of children with speech and language problems. With individual chapters written by experts in their field, this book: Illustrates how the decisions made by practitioners may vary within different work settings Shows how these decisions may need to be adapted when working with specific client groups Explores how such decisions are part of effective evidence-based practice Offers an overview of the skills required by the developing professional Provides insight into working as a newly qualified therapist in the current job market. Rigorously underpinned with current research and revised legislation, this is an important textbook for speech and language therapy students, potential students and specialist teachers in training. Speech and Language Therapy: the decision-making process when working with children will also be relevant to newly qualified therapists, therapists returning to the profession, specialist teachers and Special Educational Needs Coordinators.
