Strange Objects, New Solids and Massive Things Winka Dubbeldam,2022-01-05 The object as solid, having three dimensions, is not just a different formal trend, but a paradigm shift; a reconceiving of how the architectural object is produced and experienced, changing the very concept of objectivity and meaning of architecture. This book celebrates the potential of the strange object, which finds its origin in the proto-space—the moment between the becoming of the idea and the ultimate shape it takes; the state of the still obscure and ‘uninhibited’ object outside the established framework of signification. As seen through an examination of 10 projects by Archi-Tectonics, this strange object is proof of the very capacity of the object to generate new habits and meanings. For close to a century, modernism was the norm, presented to culturally aware citizens as the expression of modern life. It arrived hand in hand with medical advances, mass standardization, and a shared ideal of what the ease and speed of the modern lifestyle could offer. Only in the early years of the 21st century did our widespread allegiance begin to shift away from modernism and towards a new social realm. The digital revolution introduced online societies, niche cultures, and digital design. Digital manufacturing facilitated opportunities of surface patterning and the fabrication of one-off special building components, removing the constraints of standardization in the construction industry and celebrating the experimental. Testing designs through prototypes allows for a much more informed decision-making process. The focus is on precise, rigorous research and development, rather than representational models. Now, after nearly two decades of implementing digital tools, we have reached a new platform where digital design and robotic production are the norm, and by extension, digital craft and integral design are as the future. This has been particularly important in the rethinking of advanced digital design processes. As showcased and examined in *Strange Objects, New Solids and Massive Forms*, from the earliest projects and regardless of scale, Archi-Tectonics has valued performance over form, design intelligence over style. Through prototypes and mock-ups, process documentation and testimonials, the book presents 10 current and recent projects that celebrate the particular and singular over the ideal and universal. With Contributions of Manuel DeLanda, Jonathan Jackson

Building A Revolution Charlie Q.L. Xue,2005-09-01 Building a Revolution: Chinese Architecture Since 1980 presents a picture of Chinese architecture in transition, as the entire economy shifted from being planned and state-controlled to being market-led. The book also examines the national form and Chinese identity, the impact of international architecture, housing reform, and the emergence of architects in private practice. Through this book on modern Chinese architecture, the reader will appreciate the influence of globalization and modernization on the most populous country in the world.

Australian Cultural Studies John Frow,Meaghan Morris,1993 Cultural studies has emerged as a major force in the analysis of cultural systems and their relation to social power. Rather than being interested in television or architecture or pinball machines themselves - as industrial or aesthetic structures - cultural studies tends to be interested in the way such apparatuses work as points of concentration of social meaning, as 'media' (literally), according to John Frow and Meaghan Morris. Here, two of Australia's leading cultural critics bring together work that represents a distinctive national tradition, moving between high theory and detailed readings of localized cultural practices. Ethnographic audience research, cultural policy studies, popular consumption, bad aboriginal art, landscape in feature films, style, form and history in TV miniseries, and the intersections of tourism with history and memory - these are among the topics addressed in a landmark volume that cuts across myriad traditional disciplines.

Building Futures Richard Garber,2023-08-29 BUILDING FUTURES An approach to Information Modeling engaging concepts of equality, sustainability, and labor as they relate to environment and architectural practice Building Futures: Technology, Ecology, and Architectural Practice explores how architects, and the buildings and environments we create, can engage future realities, both abstract and readily understood. These range from climate change and public health to advanced ideas about manufacture and construction. The text demonstrates multiple and hybrid paths in which building information modeling (BIM) and outgrowth technological processes including environmental simulation and human-robot interaction can be utilized in today's contemporary context, expanding the architect's agency by focusing on a more conceptual, and ecological, basis for our work. Moving beyond a basic understanding of the role of computation in architecture and design, the work shows how to think critically and speculatively about technology's deeper and more lasting impacts on both architecture and society. Topics covered in Building Futures include: Technology: information modeling and the relationship between computational and real objects, new approaches to coding in architectural design, and direct-to-manufacture workflows Environment: understanding part-to-whole relationships at a variety of scales and the interconnectedness of things, post-subjective architectural approaches to ecology, and new ideas about sustainability Practice: revisiting architecture by remote control in the time of new global challenges, and novel ideas about creativity, authorship, and professionalism Design professionals and practice leaders

grappling with the relationship of technology to design pedagogy will use Building Futures to better theorize and execute their architectural vision. Students in upper-level courses studying technique and theory will also find value in the work, which prepares incoming professionals for the major changes that the Architecture, Engineering, and Construction (AEC) industry may undergo in the coming years and decades. “The book prompts us to consider simulating events where architecture and architects could mitigate, redirect or develop contingencies, in relation to the environment, flows of material and capital, and other “things” that operate from the immediate, through to almost geological timescales.” From the Foreword by Robert Stuart-Smith, Director of the Autonomous Manufacturing Lab, University of Pennsylvania

Baseball’s All-Time Best Sluggers Michael J. Schell,2016-05-31 Over baseball history, which park has been the best for run scoring? (1) Which player would lose the most home runs after adjustments for ballpark effect? (2) Which player claims four of the top five places for best individual seasons ever played, based on all-around offensive performance? (3) (See answers, below). These are only three of the intriguing questions Michael Schell addresses in *Baseball's All-Time Best Sluggers*, a lively examination of the game of baseball using the most sophisticated statistical tools available. The book provides an in-depth evaluation of every major offensive event in baseball history, and identifies the players with the 100 best seasons and most productive careers. For the first time ever, ballpark effects across baseball history are presented for doubles, triples, right- and left-handed home-run hitting, and strikeouts. The book culminates with a ranking of the game's best all-around batters. Using a brisk conversational style, Schell brings to the plate the two most important credentials essential to producing a book of this kind: an encyclopedic knowledge of baseball and a professional background in statistics. Building on the traditions of renowned baseball historians Pete Palmer and Bill James, he has analyzed the most important factors impacting the sport, including the relative difficulty of hitting in different ballparks, the length of hitters' careers, the talent pool from which players are drawn, player aging, and changes in the game that have raised or lowered major-league batting averages. Schell's book finally levels the playing field, giving new credit to hitters who played in adverse conditions, and downgrading others who faced fewer obstacles. It also provides rankings based on players' positions. For example, Derek Jeter ranks 295th out of 1,140 on the best batters list, but jumps to 103rd in the position-adjusted list, reflecting his offensive prowess among shortstops. Replete with dozens of never-before reported stories and statistics, *Baseball's All-Time Best Sluggers* will forever shape the way baseball fans view the greatest heroes of America's national pastime. We Did Everything But Win George Grimm,2017-09-05 *We Did Everything But Win: An Oral History of the Emile Francis Era* New York Rangers (1964–1976) is an entertaining account of one of the most exciting and unforgettable periods in the history of the Broadway Blueshirts as told by Francis as well as several of his players. George Grimm chronicles each season of the Francis era when “The Cat” transformed them from perennial league doormats to a team that made it to the Stanley Cup playoffs for nine consecutive seasons, including a Finals appearance in 1972. There are also chapters detailing Emile’s playing career and his hiring as general manager as well as the aftermath of his dismissal and an analysis of his tenure behind the bench and as GM. It was during those years that the National Hockey League doubled in size and the Rangers moved into a brand-new Madison Square Garden. As the popularity of the National Hockey League skyrocketed, who could forget the Rangers’ battles on the ice with Boston’s Big Bad Bruins and Philadelphia’s Broad Street Bullies and showdowns with the Montreal Canadiens and Chicago Black Hawks? All the great moments are here including a heart-stopping, triple-overtime victory in the 1971 playoffs and Vic Hadfield’s 50th goal the following season. *We Did Everything But Win* is a tribute to the Rangers of that era; Jacques Plante and Marcel Paille, Eddie Giacomin and Gilles Villemure, Harry Howell and Jim “The Chief” Neilson, “The Old Smoothies,” the “G-A-G Line,” and the “Bulldog Line.” It’s the story of colorful players with nicknames like “Boomer,” “Stemmer,” and “Sarge” and fan favorites such as Brad Park, Rod Gilbert, Jean Ratelle, Walt Tkaczuk. It’s all here—the highs and the lows, the inspiring victories, the devastating losses, and the funny moments along the way.

Making It National Graeme Turner,2020-07-22 *Making it National* argues that we need to rethink the way national identity is constructed in Australia today. Graeme Turner takes a series of recent instances - the mythologising of Bond and the larrikin entrepreneurs, the Spycatcher trials, Maralinga and the Bicentenary - showing how popular images of national identity are used to serve specific rather than national interests. 'Graeme Turner's writing has a remarkable power to engage its readers with all the immediacy, vividness and drama of our very best journalism, while putting cultural theory to work in new and creative ways.' - Meaghan Morris 'Making it National could be to the 1990s what Richard White's *Inventing Australia* was to the 1980s.' - Tony Bennett, Institute for Cultural Policy Studies, Griffith University
