Neutrosophic Sets and Systems, Vol. 37, 2020. Special issue: Impact of neutrosophy in solving the Latin American's social problems Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva Vazquez, Said Broumi, The main objective of this special issue is to divulge the applicability of the Neutrosophic Theory and to explore the possibilities and advantages of neutrosophic tools, through both the presentation of thorough research and case studies in solving social problems in Latin America. The best presentations discussed at the III International Congress of Educational Research and University Innovation, turned into papers, show us the capacity for socialization of neutrosophic knowledge and its link with this science of validation and consolidation of scientific knowledge. This publication with authors from 11 countries that we place in the hands of the international scientific community, constitutes an example of how in Latin America the Neutrosophy is contributing to complex solutions based on the results of scientific research carried out by teachers and students committed to the social responsibility of continuing to progress for the benefit of humanity.

Multiphase Equilibria of Complex Reservoir Fluids Huazhou Li, 2021-10-30 This short monograph focuses on the theoretical backgrounds and practical implementations concerning the thermodynamic modeling of multiphase equilibria of complex reservoir fluids using cubic equations of state. It aims to address the increasing needs of multiphase equilibrium calculations that arise in the compositional modeling of multiphase flow in reservoirs and wellbores. It provides a state-of-the-art coverage on the recent improvements of cubic equations of state. Considering that stability test and flash calculation are two basic tasks involved in any multiphase equilibrium calculations, it elaborates on the rigorous mathematical frameworks dedicated to stability test and flash calculation. A special treatment is given to the new algorithms that are recently developed to perform robust and efficient three-phase equilibrium calculations. This monograph will be of value to graduate students who conduct research in the field of phase behavior, as well as software engineers who work on the development of multiphase equilibrium calculation algorithms.

A Rebel Witch Holly Ice, 2021-12-07 I'm failing again, but this time family's on the chopping block A fiery old woman guilted me into finding her missing sister, Nellie, but when I land in Mykonos, my psychic powers are useless. This abductor covers their magical tracks and disappears people who ask too many questions. But with family missing, I jump on any lead that crosses my path – even if that means risking my mind and life to save them.

A Dangerous Witch Holly Ice,2020-06-15 My life is on the line. And my magic. Witches hate me for my name. They hate me more because they think I murdered my friend Justin Holt. But I was framed. And if I don't clear my name, the coven can strip my powers. Or worse: kill me. From the moment I enter the courtroom, I know the coven want me gone. Permanently. I'm viewed in the same deceitful, dangerous light as my murdering ancestors. A fair trial seems impossible, and allies are short on the ground. Until two witches with links to the coven approach me. My visions could help them, and sway my sentence. Or they could use my trust to condemn me. *A Dangerous Witch* is the second book in a new, exciting urban fantasy series.

Decoupling Victor de la Peña,Evarist Giné,2012-12-06 A friendly and systematic introduction to the theory and applications. The book begins with the sums of independent random variables and vectors, with maximal inequalities and sharp estimates on moments, which are later used to develop and interpret decoupling inequalities. Decoupling is first introduced as it applies to randomly stopped processes and unbiased estimation. The authors then proceed with the theory of decoupling in full generality, paying special attention to comparison and interplay between martingale and decoupling theory, and to applications. These include limit theorems, moment and exponential inequalities for martingales and more general dependence structures, biostatistical implications, and moment convergence in Anscombe's theorem and Wald's equation for U--statistics. Addressed to researchers in probability and statistics and to graduates, the exposition is at the level of a second graduate probability course, with a good portion of the material fit for use in a first year course.

Early Modern Voices in Contemporary Literature and on Screen Ambra Moroncini, Aaron M. Kahn, Luca Florentini, Eleonora Lima, Kristina M. Olson, Olivia Santovetti, Davide Dalmas, Gareth Wood, Mark Thornton Burnett, Yujia Jin, Carlotta Moro, Alena Gašparovičová, Victoria Ríos Castaño, 2024-03-13 The “intangible power” of literature, which, in Umberto Eco’s words, “allows us to travel through a textual labyrinth (be it an entire encyclopaedia or the complete works of William Shakespeare) without necessarily ‘unravelling’ all the information it contains”, may be clearly identifiable in our contemporary age of intertextuality and, most importantly, of interdisciplinarity. It suffices to think of the countless film adaptations of Shakespeare’s works, or of the popular appeal of Dan Brown’s global bestsellers, the so-called Robert Langdon book series, which has made original (and contentious) use of literary and artistic masterpieces such as Dante’s *Divine Comedy* and Leonardo da Vinci’s *The Last Supper*. What is more, the investigation of literature’s verballity through the lenses of cinematic and media perspectives has greatly benefitted from scholarly insights into dialogism, heteroglossia, polyphony, and historiophoty, opening new aural and visual windows of interpretation and knowledge. With these considerations in mind, this book explores the enduring presence of some of the most revolutionary early modern voices and works in our contemporary time. It embraces a rich diversity of literary genres (from poetry to storytelling, novels, fairy tales, and historical colonial chronicles, while also considering musical theatre compositions), and broadens the scope of research to the world of media, with cutting edge insights into contemporary films, TV series, and videogames. It presents innovative scholarly perspectives on how early modern works and themes are explored, remediated and refashioned today to address cultural, political, and social issues germane to our global moment.

Integrals and Series A.B Prudnikov, 2018-05-02 Volumes 4 and 5 of the extensive series *Integrals and Series* are devoted to tables of Laplace Transforms. In these companion volumes the authors have collected data scattered throughout the literature, and have augmented this material with many unpublished results obtained in their own research. Volume 4 contains tables of direct Laplace transforms, a number of which are expressed in terms of the Meijer G-function. When combined with the table of special cases, these formulas can be used to obtain Laplace transforms of numerous

elementary and special functions of mathematical physics. Volume 5 offers tables of inversion formulas for the Laplace transformation and includes tables of factorization and inversion of various integral transforms.

Tattooisme 3 Frédéric Claquin, Chris Coppola, 2016-02-04 TATTOOISME : ce mot désigne tout ce qui touche au tatouage et en fait un courant, une tendance et une définition. Ce qui était vu comme la marque de l'infamie, du rejet social, de l'appartenance à un groupe, à un milieu ou à une identité revendiquée, est considéré aujourd'hui comme un art entier et vivant. Dans ce troisième volume, Tattooisme aborde et présente du tatouage pur, des travaux artistiques de plusieurs générations de tatoueurs, et, de ce fait, reflète l'évolution du tatouage lui-même. Des découvertes, des talents émergents, de nouvelles directions et d'autres aspects plus traditionnels du tatouage d'aujourd'hui défilent dans les pages de ce nouvel ouvrage.

Human African Trypanosomiasis (Sleeping Sickness) Christian Burri, 2020-06-17 As it is a goal to eliminate human African trypanosomiasis (HAT; sleeping sickness) as a public health problem by 2020 and interrupt transmission by 2030, this is a good moment to reflect on what we have achieved, what we want to achieve, and what could get in our way. HAT has a reputation for spectacular reappearances, and the latest peak of 40,000 reported and over 300,000 estimated cases only dates back to 1998. Efforts of the WHO and partners as well as the development of simpler and much better-tolerated treatments, improved diagnostics, and vector control tools made it possible to reduce this number by 95%. Case identification and confirmation remain complex and require specific skills, treatment remains error-prone and reports on long-term survivors have emerged, and the relevance of the animal reservoir for *T. b. gambiense* HAT needs clarification. In addition, to win the “end game” against this massively stigmatized disease, the human factor will play a key role. This Special Issue addresses many of the burning topics about disease elimination in its 12 research and 7 review articles and one case study. The papers critically reflect the approaches used, investigate the mentioned challenges, and propose novel approaches and interventions from various points of view.
