A General History Of The Chinese In Singapore Chong Guan Kwa,Bak Lim Kua,2019-06-21 A General History of the Chinese in Singapore documents over 700 years of Chinese history in Singapore, from Chinese presence in the region through the millennium-old Hokkien trading world to the waves of mass migration that came after the establishment of a British settlement, and through to the development and birth of the nation. Across 38 chapters and parts, readers are taken through the complex historical mosaic of Overseas Chinese social, economic and political activity in Singapore and the region, such as the development of maritime junk trade, plantation industries, and coolie labour, the role of different bangs, clan associations and secret societies as well as Chinese leaders, the diverging political allegiances including Sun Yat-sen's revolutionary activities and the National Salvation Movement leading up to the Second World War, the transplanting of traditional Chinese religions, the changing identity of the Overseas Chinese, and the developments in language and education policies, publishing, arts, and more. With 'Pride in our Past, Legacy for our Future' as its key objective, this volume aims to preserve the Singapore Chinese story, history and heritage for future generations, as well as keep our cultures and traditions alive. Therefore, the book aims to serve as a comprehensive guide for Singaporeans, new immigrants and foreigners to have an epitome of the Singapore society. Chinese Private International Law Xiaohong Liu,Zhengyi Zhang,2021-04-22 Written with the assistance of a team of lecturers at the Shanghai University of Political Science and Law, this book is the leading reference on Chinese private international law in English. The chapters systematically cover the whole of Chinese private international law, not just questions likely to arise in commercial matters, but also in family, succession, cross-border insolvency, intellectual property, competition (antitrust), and environmental disputes. The chapters do not merely cover the traditional conflict of law areas of jurisdiction, applicable law (choice of law), and enforcement. They also look into conflict of law questions arising in arbitration and assess China's involvement in the harmonisation of private international law globally and regionally within the Belt and Road Initiative. Similarly to the Japanese and Indonesian volumes in the Series, this book presents Chinese conflict of laws through a combination of common and civil law analytical techniques and perspectives, providing readers worldwide with a more profound and comprehensive understanding of Chinese private international law.

Modeling and Control of EGR on Marine Two-Stroke Diesel Engines Xavier Llamas,2018-02-20 The international marine shipping industry is responsible for the transport of around 90% of the total world trade. Low-speed two-stroke diesel engines usually propel the largest trading ships. This engine type choice is mainly motivated by its high fuel efficiency and the capacity to burn cheap low-quality fuels. To reduce the marine freight impact on the environment, the International Maritime Organization (IMO) has introduced stricter limits on the engine pollutant emissions. One of these new restrictions, named Tier III, sets the maximum NOx emissions permitted. New emission reduction technologies have to be developed to fulfill the Tier III limits on two-stroke engines since adjusting the engine combustion alone is not sufficient. There are several promising technologies to achieve the required NOx reductions, Exhaust Gas Recirculation (EGR) is one of them. For automotive applications, EGR is a mature technology, and many of the research findings can be used directly in marine applications. However, there are some differences in marine two-stroke engines, which require further development to apply and control EGR. The number of available engines for testing EGR controllers on ships and test beds is low due to the recent introduction of EGR. Hence, engine simulation models are a good alternative for developing controllers, and many different engine loading scenarios can be simulated without the high costs of running real engine tests. The primary focus of this thesis is the development and validation of models for two-stroke marine engines with EGR. The modeling follows a Mean Value Engine Model (MVEM) approach, which has a low computational complexity and permits faster than real-time simulations suitable for controller testing. A parameterization process that deals with the low measurement data availability, compared to the available data on automotive engines, is also investigated and described. As a result, the proposed model is parameterized to two different two-stroke engines showing a good agreement with the measurements in both stationary and dynamic conditions. Several engine components have been developed. One of these is a new analytic in-cylinder pressure model that captures the influence of the injection and exhaust valve timings without increasing the simulation time. A new compressor model that can extrapolate to low speeds and pressure ratios in a physically sound way is also described. This compressor model is a requirement to be able to simulate low engine loads. Moreover, a novel parameterization algorithm is shown to handle well the model nonlinearities and to obtain a good model agreement with a large number of tested compressor maps. Furthermore, the engine model is complemented with dynamic models for ship and propeller to be able to simulate transient sailing scenarios, where good EGR controller performance is crucial. The model is used to identify the low load area as the most challenging for the controller performance, due to the slower engine air path dynamics. Further low load simulations indicate that sensor bias can be problematic and lead to an undesired black smoke formation, while errors in the parameters of the controller flow estimators are not as critical. This result is valuable because for a newly built engine a proper sensor setup is more straightforward to verify than to get the right parameters for the flow estimators.

Advanced Intelligent Computing. Theories and Applications De-Shuang Huang,Martin McGinnity,Laurent Heutte,Xiao-Ping Zhang,2010-07-30 The International Conference on Intelligent Computing (ICIC) was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, image processing, bioinformatics, and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas,

problems, and solutions related to the multifaceted aspects of intelligent computing. ICIC 2010, held in Changsha, China, August 18-21, 2010, constituted the 6th International Conference on Intelligent Computing. It built upon the success of ICIC 2009, ICIC 2008, ICIC 2007, ICIC 2006, and ICIC 2005, that were held in Ulsan, Korea, Shanghai, Qingdao, Kunming and Hefei, China, respectively. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was "Advanced Intelligent Computing Technology and Applications." Papers focusing on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

Computer Science and Artificial Intelligence Chang Wen-jer, 2017-07-19 Held in Guilin of China from August 13-14, 2016, the 2016 International Conference on Computer Science and Artificial Intelligence (CSAI2016) provides an excellent international platform for all invited speakers, authors and participants to share their results and establish research collaborations for future research. The conference enjoys a wide spread participation. It would not only serve as an academic forum, but also a good opportunity to establish business cooperation. CSAI2016 proceedings collects the most up-to-date, comprehensive, and worldwide state-of-art knowledge on computer science and artificial intelligence. After strict peer-review, the proceedings put together 117 articles based on originality, significance and clarity for the purpose of the conference.

Histamine in the brain Jian-Sheng Lin, Pertti Panula, Maria Beatrice Passani, 2015-03-18 Brain aminergic pathways are organized in parallel and interacting systems, which support a range of functions, from homeostatic regulations to cognitive, and motivational processes. Despite overlapping functional influences, dopamine, serotonin, noradrenaline and histamine systems provide different contributions to these processes. The histaminergic system, long ignored as a major regulator of the sleep-wake cycle, has now been fully acknowledged also as a major coordinator of attention, learning and memory, decision making. Although histaminergic neurons project widely to the whole brain, they are functionally heterogeneous, a feature which may provide the substrate for differential regulation, in a region-specific manner, of other neurotransmitter systems. Neurochemical preclinical studies have clearly shown that histamine interacts and modulates the release of neurotransmitters that are recognized as major modulators of cognitive processing and motivated behaviours. As a consequence, the histamine system has been proposed as a therapeutic target to treat sleep-wake disorders and cognitive dysfunctions that accompany neurodegenerative and neuroinflammatory pathologies. Last decades have witnessed an unexpected explosion of interest in brain histamine system, as new receptors have been discovered and selective ligands synthesised. Nevertheless, the complete picture of the histamine systems fine-tuning and its orchestration with other pathways remains rather elusive. This Research Topic is intended to offer an inter-disciplinary forum that will improve our current understanding of the role of brain histamine and provide the fundamentals necessary to drive innovation in clinical practice and to improve the management and treatment of neurological disorders.
