Flying Ad Hoc Networks Jingjing Wang, Chunxiao Jiang, 2022-02-10 Relying on unmanned autonomous flight control programs, unmanned aerial vehicles (UAVs) equipped with radio communication devices have been actively developed around the world. Given their low cost, flexible maneuvering and unmanned operation, UAVs have been widely used in both civilian operations and military missions, including environmental monitoring, emergency communications, express distribution, even military surveillance and attacks, for example. Given that a range of standards and protocols used in terrestrial wireless networks are not applicable to UAV networks, and that some practical constraints such as battery power and no-fly zone hinder the maneuverability capability of a single UAV, we need to explore advanced communication and networking theories and methods for the sake of supporting future ultra-reliable and low-latency applications. Typically, the full potential of UAV network's functionalities can be tapped with the aid of the cooperation of multiple drones relying on their ad hoc networking, in-network communications and coordinated control. Furthermore, some swarm intelligence models and algorithms conceived for dynamic negotiation, path programming, formation flight and task assignment of multiple cooperative drones are also beneficial in terms of extending UAV's functionalities and coverage, as well as of increasing their efficiency. We call the networking and cooperation of multiple drones as the terminology 'flying ad hoc network (FANET)', and there indeed are numerous new challenges to be overcome before the idespread of so-called heterogeneous FANETs. In this book, we examine a range of

technical issues in FANETs, from physical-layer channel modeling to MAC-layer resource allocation, while also introducing readers to UAV aided mobile edge computing techniques.

Encyclopedia of Vedic Astrology: Remedies Shanker Adawal, There are large number of books available in the public domain which talks about various remedial methods that could be followed. Also there are groups of people who talk about the benefits of yoga, mantra, vantra and allied topics, each of which has a scientific logic as is the case with the manuscripts left behind by the Rishis. As we all are aware, there are planets which by their interaction, govern our destiny. My belief, developed during the study of this science, is that destiny depends on four major things in equal proportion. These are; our previous karma, the place where we are staying, the people with whom we interact and our own efforts. These are the four parameters and within each comes the important of a large gamut of activities. There is a complex equation that is a matter of study and research which, like any other science, gets deciphered and known. I therefore believe that chart at the time of birth, coupled with the year's horoscope and the time at which the guery is being asked, have to be co-related and a vector from them gives the correct analysis of the guery. Similarly, as each planet is associated with a colour and the colours are in turn related to vibrations - a complex phenomenon by itself; the various mantras, colour therapy and other remedies have relevance.

NBER Macroeconomics Annual 2016 Martin Eichenbaum, Jonathan A. Parker, 2017-05-22 The thirty-first edition of the NBER Macroeconomics Annual features theoretical and empirical research on central issues in contemporary macroeconomics. The first two papers are rigorous and data-driven analyses of the European financial crisis. The third paper introduces a new set of facts about economic growth and financial ratios as well as a new macrofinancial database for the study of historical financial booms and busts. The fourth paper studies the historical effects of Federal Reserve efforts to provide guidance about the future path of the funds rate. The fifth paper explores the distinctions between models of price setting and associated nominal frictions using data on price setting behavior. The sixth paper considers the possibility that the economy displays nonlinear dynamics that lead to cycles rather than long-term convergence to a steady state. The volume also includes a short paper on the decline in the rate of global economic growth.

**Know about Zodiac Signs** Shanker Adawal, This is the first book which would interest the masses as it talks about the zodiac signs which is a fairly good indicator of one's

personality and instincts irrespective of strata and position. This book dwells into the details of each sign with respect to relationships, love, and compatibility with other signs, financial and professional implication. Aspects of favourable colour, direction and other such issues of interest along with simple solutions applicable for each sign have also been covered in this book. This book also has a unique feature of giving a 12 year trend for each sign and the readers would find it useful in broadly knowing what they can expect in the coming years. It would provide a new dimension to the readers interested in knowing about their zodiac signs.

<u>Vastu Shastra (Based on Classics)</u> Shanker Adawal, In this book the principles of Vastu as propounded in our ancient books that are MUST, have been explained in a manner that can be comprehended by everyone. The essentials ENERGY SOURCES are air, sunlight, and the cosmos energy. These with the knowledge of energy flow assigned to different sectors (Agni, Varun, Yam etc) and directions (Eeshan – North East for prayers, South – East for Agni etc) have been accounted while explaining the basics. They are important for creating subtle energies which provide for mental peace and happiness in a property and related to you as an energy source too. This book can be used as a ready referral by all. It would be very useful while you start construction or reworking a property. The energy flow can correct impressions that are important for peace. The author is sure that readers will find this book interesting. It can be used by all in various walks of life.

**Medical Astrology for Beginners** Arun Bansal, The diseases are the result of our past karmas and indicated by weak and afflicted planets. This can be easily understood by an astrologer. Therefore every book on astrology has discussed the diseases and yogas for

these diseases are scattered throughout the astrological literature. Some of these Yogas have been compiled in this book for the intelligent readers with the observations and experiences of author. Author has used the astrology for the purpose of diagnosis as other laboratory tests, MRI and CAT SCAN etc. It gave good results to understand whether the chronic diseases are curable or not. Moreover it has helped to understand the time period of onset of the disease which no other science can explain. Therefore astrology is science of sciences. One must be careful while predicting diseases because so many factors are involved in prediction. Only the yoga for disease is not sufficient. If the yoga is aspected by benefic planets, the results will be nullification of malefic influence. The disease depends on the strength of the disease producing planets. Even if a disease may be indicated from a house from lagna but from Moon and navamsha lagna the same house is strong and lord is fortified, the malefic influence may get cancelled. Therefore while judging one must consider the house, lord of house and karaka of the house, rashish where the lord of house is posited i.e. dispositor, and navamshesh, the lord of house in navamsha chart where the lord of the house is posited, and relationship in navamsha chart between lagna lord and lord of the house into consideration from lagna, Moon, navamsha lagna and nakshatra of the planet in which he is posited. One must take into consideration the nature and qualities of the planets causing the disease; functional benefic or malefic to the lagna house in which they are posited. The benefic planet will certainly cause less harm than the malefic planet. The relationship between the two planets also affects the disease producing capacity. The relationship is also natural and functional. The aspect and conjunction of the planets should also be taken into consideration. The retrograde malefic planet is more powerful in causing

diseases than the normal malefic planet. The retrograde benefic planet does not protect the native. When a benefic planet is lord of maraka house and posited in that house, it becomes strong maraka planet. Keeping the above factors into consideration we can predict the timing of onset of diseases with the help of dasha system and Gochar. The most common dasha system employed is Vimshottari dasha system. Still we can divided the timing of diseases into: 1.Yogas present in the horoscope 2. Dasha/bhukti/Paratyantar dasha 3. Transit (Gochar) 4. Horary All these factors have been discussed in this book in detail.

**Massive MIMO** Hien Quoc Ngo,2015-01-16 The last ten years have seen a massive growth in the number of connected wireless devices. Billions of devices are connected and managed by wireless networks. At the same time, each device needs a high throughput to support applications such as voice, real-time video, movies, and games. Demands for wireless throughput and the number of wireless devices will always increase. In addition, there is a growing concern about energy consumption of wireless communication systems. Thus, future wireless systems have to satisfy three main requirements: i) having a high throughput; ii) simultaneously serving many users; and iii) having less energy consumption. Massive multiple-input multiple-output (MIMO) technology, where a base station (BS) equipped with very large number of antennas (collocated or distributed) serves many users in the same time-frequency resource, can meet the above requirements, and hence, it is a promising candidate technology for next generations of wireless systems. With massive antenna arrays at the BS, for most propagation environments, the channels become

favorable, i.e., the channel vectors between the users and the BS are (nearly) pairwisely orthogonal, and hence, linear processing is nearly optimal. A huge throughput and energy efficiency can be achieved due to the multiplexing gain and the array gain. In particular, with a simple power control scheme, Massive MIMO can offer uniformly good service for all users. In this dissertation, we focus on the performance of Massive MIMO. The dissertation consists of two main parts: fundamentals and system designs of Massive MIMO. In the first part, we focus on fundamental limits of the system performance under practical constraints such as low complexity processing, limited length of each coherence interval, intercell interference, and finite-dimensional channels. We first study the potential for power savings of the Massive MIMO uplink with maximum-ratio combining (MRC), zero-forcing, and minimum mean-square error receivers, under perfect and imperfect channels. The energy and spectral efficiency tradeoff is investigated. Secondly, we consider a physical channel model where the angular domain is divided into a finite number of distinct directions. A lower bound on the capacity is derived, and the effect of pilot contamination in this finitedimensional channel model is analyzed. Finally, some aspects of favorable propagation in Massive MIMO under Rayleigh fading and line-of-sight (LoS) channels are investigated. We show that both Rayleigh fading and LoS environments offer favorable propagation. In the second part, based on the fundamental analysis in the first part, we propose some system designs for Massive MIMO. The acquisition of channel state information (CSI) is very importantin Massive MIMO. Typically, the channels are estimated at the BS through uplink training. Owing to the limited length of the coherence interval, the system performance is limited by pilot contamination. To reduce the pilot contamination effect, we propose an

eigenvalue-decomposition-based scheme to estimate the channel directly from the received data. The proposed scheme results in better performance compared with the conventional training schemes due to the reduced pilot contamination. Another important issue of CSI acquisition in Massive MIMO is how to acquire CSI at the users. To address this issue, we propose two channel estimation schemes at the users: i) a downlink beamforming training scheme, and ii) a method for blind estimation of the effective downlink channel gains. In both schemes, the channel estimation overhead is independent of the number of BS antennas. We also derive the optimal pilot and data powers as well as the training duration allocation to maximize the sum spectral efficiency of the Massive MIMO uplink with MRC receivers, for a given total energy budget spent in a coherence interval. Finally, applications of Massive MIMO in relay channels are proposed and analyzed. Specifically, we consider multipair relaying systems where many sources simultaneously communicate with many destinations in the same time-frequency resource with the help of a massive MIMO relay. A massive MIMO relay is equipped with many collocated or distributed antennas. We consider different duplexing modes (full-duplex and half-duplex) and different relaying protocols (amplify-and-forward, decode-and-forward, two-way relaying, and one-way relaying) at the relay. The potential benefits of massive MIMO technology in these relaying systems are explored in terms of spectral efficiency and power efficiency.
