Bangladesh II: Climate Change Impacts, Mitigation and Adaptation in Developing Countries Md. Nazrul Islam, André van Amstel, 2021-08-03 This volume aims to develop a framework for disaster and climate risk resilient livelihood system in Bangladesh using a policy oriented approach. It highlights the possible impacts of climate change on groundwater based irrigation in the country. Climate change is one of biggest challenges to society. It can lead to serious impacts on production, life and environment on a global scale. Higher temperatures and sea level rise will cause flooding and water salinity problems which will bring about negative effects on agriculture and high risks to industry and socio-economic systems in the future. Climate change will lead to many changes in global development and security especially energy, water, food, society, job, diplomacy, culture, economy and trade. The Intergovernmental Panel on Climate Change (IPCC) defines climate change as: "Any change in climate over time, whether due to natural variability or as a result of human activity." Global climate change has emerged as a key issue in both political and economic arenas. It is an increasingly questioned phenomenon, and progressive national governments around the world have started taking action to respond to these environmental concerns.

This book covers the chemical composition and nutraceutical and pharmaceutical properties of edible fungi. It provides updates, future trends and perspectives on edible fungi, their nutritional properties, chemical features and different biological activities ascribed to them. Linking their functional use with different food products, it details the many health related properties of edible fungi. Phenolic acids, fatty acids, macromolecules, and different terpenes and steroids are presented as compounds with health improving properties. The book also discusses current technologies for mushroom cultivation and cultural use of mushrooms around the globe. Intended for food scientists and technologists, this book offers insights into current research and developments on edible fungi and will stimulate additional research in this area. It could also be considered as a supplementary text for courses such as applied or medical mycology.

Plants and Phytomolecules for Immunomodulation Neelam S. Sangwan, Mohamed A. Farag, Luzia Valentina Modolo, 2022-08-30 This book describes the process of immunomodulation and the plants which possess immunomodulation properties to boost the immune system. The immunomodulation process is highly relevant to address emerging as well as existing diseases in humans. A better immune system triggers the cellular responses for neutralizing and combating the onset of disease conditions. Chapters in the book discuss plants that have profound effects on the health and well-being of humans. They discuss the natural phytochemicals that have immense diversity and uniqueness of molecules. Molecules belonging to phenylpropanoids, terpenoids, steroids, alkaloids, and tannins etc possess a variety of pharmacological activities. The chapters describe how bioactive exert effects even when taken as part of the diet, supplement, and or as traditional herbal medicine. This book provides up-to-date scientific knowledge about the activities and mechanisms and leads in the area of medicinal plants and phytochemicals with immunomodulation properties. This book is meant for students, academics, researchers, and industry professionals interested in pharmacology, immunology, and plant secondary metabolites.

Ganoderma and Health Zhibin Lin, Baoxue Yang, 2019-11-27 This book presents a state-of-the-art report on recent advances concerning Ganoderma and where the field is going. Although some older work is also cited, the main focus is on advances made over the past 20 years in the pharmacology and clinical applications of Ganoderma. Ganoderma lucidum (Lingzhi) has been used as a traditional medicine in Asian countries to maintain health and to treat diseases for more than two thousand years. Recently, its value has been demonstrated in preventing and treating certain diseases, such as tumors, liver disorders, renal injury, hypercholesterolemia, obesity, cerebral ischemia reperfusion, bronchitis etc. In addition, laboratory and clinical studies have confirmed that the chemical components of Ganoderma, such as Ganoderma lucidum polysaccharide peptides and triterpenes isolated from the fruiting body of Ganoderma lucidum, produce diverse pharmacological effects. Ganoderma and its components play an important part in antioxidant stress, radical-scavenging, immunomodulation, and intracellular signaling regulation, and accordingly warrant further study. This book systematically reviews the latest advances in our understanding of pharmacology and clinical applications of Ganoderma, and offers researchers and graduate students valuable new insights into the pharmacology and clinical applications of Ganoderma and related products.

Party Government in 48 Democracies (1945–1998) J.J. Woldendorp,Hans Keman,I. Budge,2013-04-17 Since the 1980s, political scientists have developed a renewed interest in the study of political institutions, based on the assumption that institutions matter -that is, that formal governmental institutions and constitutional-legal rules (as well as informal institutions like parties and interest groups) are crucial determinants of the shape of politics and policy outcomes. In this respect, the new institutionalism resembles the old institutionalism of pre-behaviorist days, but the crucial difference between the two is that the new institutionalists are committed to systematic empirical testing of their hypotheses, at least in principle. In practice, however, especially in comparative analyses, this goal has often been frustrated by the lack of reliable data for a large number of countries. Researchers have therefore usually been limited to testing their hypotheses with modest data sets collected for their own particular purposes. Of all of the political institutions, the executive branch of the government is by far the most important; it can be regarded as the irreducible core of government and the principal embodiment of political authority with specific powers that are not lodged elsewhere in the political system. Almost all countries in the world, and certainly all modern democracies, have an executive body called government, cabinet, or administration (as in the term the Clinton administration) that has the main responsibility for running the country's public affairs.
