Competing Values Leadership Kim S. Cameron, Robert E. Quinn, Jeff Degraff, Anjan V. Thakor, 2014-08-29 øIt would be unusual for a framework as powerful and predictive as the Competing Values Framework to remain unchallenged and absent of criticism. In addition to updating the examples and references, this second edition provides a new chapter motivated

Competing Values Leadership Cameron, Kim S., Quinn, Robert E., DeGraff, Jeff, Thakor, Anjan V., 2022-07-12 This third edition of *Competing Values Leadership* serves as the key source for understanding and using the Competing Values Framework, one of the most widely used and highly cited frameworks in the world for understanding human behavior, leadership, and organizations. The authors of the framework, who have been at the foundation of developing, applying, and studying this framework for more than four decades, explain how it helps foster successful leadership, innovation, culture change, financial performance, organizational effectiveness, and value creation.

Anthrax in Humans and Animals World Health Organization, 2008 This fourth edition of the anthrax guidelines encompasses a systematic review of the extensive new scientific literature and relevant publications up to end 2007 including all the new information that emerged in the 3-4 years after the anthrax letter events. This updated edition provides information on the disease and its importance, its etiology and ecology, and offers guidance on the detection, diagnostic, epidemiology, disinfection and decontamination, treatment and prophylaxis procedures, as well as control and surveillance processes for anthrax in humans and animals. With two rounds of a rigorous peer-review process, it is a relevant source of information for the management of anthrax in humans and animals.

Wild Cats Kristin Nowell, Peter Jackson, IUCN/SSC Cat Specialist Group, 1996 Presents the most comprehensive and up-to-date information available on the 36 wild cats of the world. It includes the first published collection of detailed range maps and some of the first photographs of rare species in the wild. It provides a thorough review of major issues in cat conservation such as habitat loss and management of big cats in livestock areas; field and laboratory research; international trade; the role of zoos; and reintroduction. High priority are identified to further the cause of cat conservation.

Conservation by Proxy Tim Caro, 2010-06-23 The vast scope of conservation problems has forced biologists and managers to rely on surrogate species to serve as shortcuts to guide their decision making. These species-known by a host of different terms, including indicator, umbrella, and flagship species-act as proxies to represent larger conservation issues, such as the location of biodiversity hotspots or general ecosystem health. Synthesizing an immense body of literature, conservation biologist and field researcher Tim Caro offers systematic definitions of surrogate species concepts, explores biological theories that underlie them, considers how surrogate species are chosen, critically examines evidence for and against their utility, and makes recommendations for their continued use. The book clarifies terminology and contrasts how different terms are used in the real world considers the ecological, taxonomic, and political underpinnings of these shortcuts identifies criteria that make for good

surrogate species outlines the circumstances where the application of the surrogate species concept shows promise. Conservation by Proxy is a benchmark reference that provides clear definitions and common understanding of the evidence and theory behind surrogate species. It is the first book to review and bring together literature on more than fifteen types of surrogate species, enabling us to assess their role in conservation and offering guidelines on how they can be used most effectively.

The Evolution of Senescence in the Tree of Life Richard P. Shefferson, Owen R. Jones, Roberto Salguero-Gómez, 2017-02-23 The existing theories on the evolution of senescence assume that senescence is inevitable in all organisms. However, recent studies have shown that this is not necessarily true. A better understanding of senescence and its underlying mechanisms could have far-reaching consequences for conservation and evolutionary research. This book is the first to offer interdisciplinary perspectives on the evolution of senescence in many species, setting the stage for further developments. It brings together new insights from a wide range of scientific fields and cutting-edge research done on a multitude of different animals (including humans), plants and microbes, giving the reader a complete overview of recent developments and of the controversies currently surrounding the topic. Written by specialists from a variety of disciplines, this book is a valuable source of information for students and researchers interested in ageing and life history traits and populations.

Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, Robert V. O'Neill, 2007-05-08 An ideal text for students taking a course in landscape ecology. The book has been written by very well-known practitioners and pioneers in the new field of ecological analysis. Landscape ecology has emerged during the past two decades as a new and exciting level of ecological study. Environmental problems such as global climate change, land use change, habitat fragmentation and loss of biodiversity have required ecologists to expand their traditional spatial and temporal scales and the widespread availability of remote imagery, geographic information systems, and desk top computing has permitted the development of spatially explicit analyses. In this new text book this new field of landscape ecology is given the first fully integrated treatment suitable for the student. Throughout, the theoretical developments, modeling approaches and results, and empirical data are merged together, so as not to introduce barriers to the synthesis of the various approaches that constitute an effective ecological synthesis. The book also emphasizes selected topic areas in which landscape ecology has made the most contributions to our understanding of ecological processes, as well as identifying areas where its contributions have been limited. Each chapter features questions for discussion as well as recommended reading.

Alligator Life Cycles Sabrina Crewe, 1998 Provides an introduction to the life cycle, physical characteristics, behavior, and habitat of the American alligator.

Creative Conservation P.J. Olney, G. Mace, A. Feistner, 2012-12-06 Past progress and future challenges R.J. Wheater Royal Zoological Society of Scotland, Edinburgh, UK. In the past two decades much has been achieved in the sphere of breeding endangered species, and we should be pleased that our co operative efforts have already borne so much

fruit. However, on balance and despite the best efforts of conservationists, the position of wildlife in the wild places where they are best conserved has become worse, often dramatically worse. Before returning to the United Kingdom in 1972, I was in Uganda for 16 years, most of which time was spent as Chief Warden of Murchison Falls National Park. Our main problem was that an over-population of large mammals was having a devastating impact on the habitat. Devastation was being wrought on woodland areas by the arrival of large numbers of elephants into the sanctuary of the Park, following changes in land use in the areas outside the Park. These changes were in response to the requirements of an ever-expanding human population.

Wildlife Tourism Karen Higginbottom, 2004 This is a comprehensive volume on the subject of wildlife tourism, written by experts in the field and drawing on a wide range of disciplines. It covers the full scope of wildlife tourism, including zoos, wildlife watching, hunting and fishing. Also includes a up to date review of the issues of wildlife tourism.

Fossil Spiders David Penney, Paul A. Selden, Paul Selden, 2011 Compared to insects, fossil spiders have received only scant attention in the literature. Previously, the only works available were numerous scientific papers, many published in foreign languages. Most of these are basic descriptive taxonomic works, with very few considering broader biological concepts. Despite a significant increase in the discovery and description of fossil spiders within the last quarter Century this void remained unfilled. Thus, this short monograph aims to achieve several objectives. Firstly, to provide general and up to date background information on the overall importance and diversity of fossil spiders, including an indication of those groups for which the taxonomy is spurious and in need of reassessment. Secondly, to discuss the techniques available for working with fossil spiders and some of the problems encountered by palaeoarachnologists, including bias and limitations of the spider fossil record. Thirdly, the overall evolutionary history of spiders is summarized in the form of an evolutionary tree, which is subsequently used to address key issues of broad interest, such as origins, diversifications and extinctions, including the effects of mass extinctions and predator-prey co-radiations. Finally, the contribution that fossil data can make to understanding the past and present biogeography of the order is considered. This book should be of interest to both amateur and professional arachnologists and palaeontologists and will also serve as a general palaeontological reference work for neontologists studying extant spiders.

American Wildlife Art David J. Wagner, 2008

Terrestrial Ecosystems Through Time Anna K. Behrensmeyer, 1992-08-15 Breathtaking in scope, this is the first survey of the entire ecological history of life on land—from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture. By providing myriad insights into the unique ecological information contained in the fossil record, it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems. A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History, Smithsonian Institution, and twenty-six additional researchers, this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary

paleoecology. Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct organisms and the communities in which they lived. The remaining three chapters treat the history of terrestrial ecosystems through geological time, emphasizing how ecological interactions have changed, the rate and tempo of ecosystem change, the role of exogenous forcing factors in generating ecological change, and the effect of ecological factors on the evolution of biological diversity. The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History, Smithsonian Institution.

International Waters in Southern Africa Mikiyasu Nakayama, 2003 Sharing water resources among basin countries is a major topic of discussion for those responsible for managing international water systems. Planned water transfer schemes can result in environmental and security disputes. Southern Africa is one of the world's most critical regions in terms of water management, with a large disparity in availability of water between the relatively wet northern part of the region and the drier south. The first transboundary transfer of water occurred in the Southern African region in January 1998, between Lesotho and South Africa.

Genital Cutting: Protecting Children from Medical, Cultural, and Religious Infringements George C. Denniston, Frederick M. Hodges, Marilyn Fayre Milos, 2013-06-03 This volume contains the proceedings of the 10th International Symposium on Circumcision, Genital Integrity, and Human Rights. Authors are international experts in their fields, and the book contains the most up-to-date information on the issue of genital cutting of infants and children from medical, legal, bioethical, and human rights perspectives.

Sustaining the World's Wetlands Richard Smardon, 2009-06-13 Wetlands throughout the world, including those described in this book are among the most sensitive and vulnerable ecosystems. They are critical habitats to the world's migratory birds and a broad range of endangered mammal, reptile, amphibian, and plant species. They provide a broad range of flood storage, pollution control, water supply, ecotourism functions to indigenous peoples and country populations as a whole. They are also at the center of severe land and water use conflicts. These are conflicts between countries where wetland resources or the water supplies required for such resources involve more than one country. These are conflicts in use such as conflicts between habitat protection and charcoal production in mangroves. These are conflicts between groups of peoples such as indigenous peoples and hydropower advocates. Many wetlands have already been destroyed by water extractions, dams, levees, channelization, and fills. Others have been degraded by water pollution, overfishing and overhunting, timber

harvest, and a host of other activities. This book describes these conflicts and international policies and institutions developed to protect and manage wetland resources. Most of the broader literature and other books on wetlands focuses on wildlife. Wildlife is described in the case studies, which follow. But, Richard Smardon provides us with more. He traces the history of conflicts and the development of policies and institutions to protect and manage wetland resources.

Parks, Peace, and Partnership Michael S. Quinn, Wayne A. Freimund, Len Broberg, 2012 Current international thinking in this area is reflected in this collection of essays by park managers, biologists, scholars, scientists, and researchers. From Waterton-Glacier International Park to the European Alps, and Lake Titicaca in Peru and Bolivia, the essays provide illustrative examples of the challenges and new solutions that are emerging around the world.--

The book also reflects on the contributions of the Somali sources on history and culture. Arabic sources and other non-English colonial sources of great importance to the subject are also highlighted. A vital addition to reference collections supporting undergraduate and graduate programs on Africa and the Middle East, international relations, and economics_and a useful fact-filled compendium for government and public libraries, NGO's, and other special libraries as well.
