Oxford Studies in Early Modern Philosophy Daniel Garber, Donald Rutherford, 2019-01-29 *Oxford Studies in Early Modern Philosophy* is an annual series, presenting a selection of the best current work in the history of early modern philosophy. It focuses on the seventeenth and eighteenth centuries--the extraordinary period of intellectual flourishing that begins, very roughly, with Descartes and his contemporaries and ends with Kant. It also publishes papers on thinkers or movements outside of that framework, provided they are important in illuminating early modern thought. The articles in *OSEMP* will be of importance to specialists within the discipline, but the editors also intend that they should appeal to a larger audience of philosophers, intellectual historians, and others who are interested in the development of modern thought.

Monads, Composition, and Force Richard T. W. Arthur, 2018-09-26 Leibniz's monads have long been a source of fascination and puzzlement. If monads are merely immaterial, how can they alone constitute reality? In *Monads, Composition and Force*, Richard T. W. Arthur takes seriously Leibniz's claim of introducing monads to solve the problem of the composition of matter and motion. Going against a trend of idealistic interpretations of Leibniz's thought, Arthur argues that although monads are presupposed as the principles making actual each of the infinite parts of matter, bodies are not composed of them. He offers a fresh interpretation of Leibniz's theory of substance in which monads are enduring primitive forces, corporeal substances are embodied monads, and bodies are aggregates of monads, not mere appearances. In this reading the monads are constitutive unities, constituting an organic unity of function through time, and bodies are phenomenal in two senses; as ever-changing things they are Platonic phenomena and as pluralities, in being perceived together, they are also Democritean phenomena. Arthur argues for this reading by describing how Leibniz's thought is grounded in seventeenth century atomism and the metaphysics of the plurality of forms, showing how his attempt to make this foundation compatible with mechanism undergirds his insightful contributions to biological science and the dynamical foundations he provides for modern physics.

Contesting home defence Penny Summerfield, Corinna Peniston-Bird, 2013-07-19 *Contesting home defence* is a new history of the Home Guard, a novel national defence force of the Second World War composed of civilians who served as part-time soldiers: it questions accounts of the force and the war, which have seen them as symbols of national unity. It scrutinises the Home Guard's reputation and explores whether this 'people's army' was a site of social cohesion or of dissension by assessing the competing claims made for it at the time. It then examines the way it was represented during the war and has been since, notably in Dad's Army, and discusses the memories of men and women who served in it. The book makes a significant and original contribution to debates concerning the British home front and introduces fresh ways of understanding the Second World War.
