Petri Nets in Flexible and Agile Automation MengChu Zhou,2012-12-06 Over the past two decades, research in the theory of Petri nets and the development of graphical tools has yielded a powerful methodology. The contributions in Petri Nets in Flexible and Agile Automation present theoretical development of Petri nets as well as in industrial applications to areas such as discrete- event control design, scheduling, performance evaluation and deadlock avoidance. These contributions also include comparative studies of Petri nets and other approaches. A primary theme of this book is to provide a unified approach to the applications of Petri nets in flexible and agile automation and, in that regard, a common notation and terminology is used. The book also allows readers to

evaluate the benefits and applicability of state-of-the-art Petri net methods and apply CAD tools to problems of interest. Petri Nets in Flexible and Agile Automation is not only an essential reference for researchers, it is also a very useful tool for engineers, analysts and managers who are responsible for the design, implementation and operation of the next generation of manufacturing systems.

Smart Manufacturing Factory Jiafu Wan, Baotong Chen, Shiyong Wang, 2023-12-28
Artificial Intelligence (AI) technologies enable manufacturing systems to sense the environment, adapt to external needs, and extract process knowledge, including business models such as intelligent production, networked collaboration, and extended service models. This book therefore focuses on the implementation of AI in customized manufacturing (CM). The main topics include edge intelligence in manufacturing, heterogeneous networks, intelligent fault diagnosis and maintenance, dynamic resource scheduling in manufacturing, and the construction mode of the smart factory. Based on the insights of CM and AI, the authors demonstrate the implementation of AI in the smart factory for CM, including architecture, information fusion, data analysis, dynamic scheduling, flexible production line construction, and smart manufacturing services. This book will provide important research content for scholars in artificial intelligence, smart manufacturing, machine learning, multi-agent systems, and industrial Internet of Things.

Manufacturing Systems: Modelling, Management and Control 1997 Peter Kopacek, 1997-07-02 The IFAC TC on Manufacturing, Modelling, Management and Control (MIM) was founded on the IFAC World Congress Sydney 1993. The goals of this workshop concerned the development, comparison and classification of formal models in the field of Computer Integrated Manufacturing Systems in a descriptive as well as prescriptive way. Computer Integrated Manufacturing Systems are able to integrate optimization methods, simulation models, procedures and knowledge-based tools. The target for the workshop activities were related to the specification of requirements for new models which are used in simulating and designing manufacturing management and control strategies, including discrete-event and continuous representations. Technical areas of interest, at the system level, included: tools for plant layout design, process planning, production planning and control. Technical areas of interest, at the component level, included: models for
