Primate Behavior Leonard A. Rosenblum, 2013-09-24 Primate Behavior: Developments in Field and Laboratory Research, Volume 4 examines developments in field and laboratory research on primate behavior. Topics range from facial expressions in nonhuman primates to the behavior and malnutrition in the rhesus monkey. The population structure and dynamics of the Borneo orang-utan in relation to its ecology and reproductive strategy are also discussed, along with the social organization of *Macaca fascicularis*. Comprised of six chapters, this volume begins by discussing a field study that uses sound analysis to investigate the link between vocal pattern and social situation

in the Japanese monkey (*Macaca fuscata*). The next chapter focuses on one particular and very important means of visual communication in nonhuman primates: facial expressions. The behavior of marmoset monkeys (*Callithricidae*) is then considered, with emphasis on their social structure and social organization as well as patterns of social and sexual communication. The remaining chapters explore feeding behavior and malnutrition in the rhesus monkey; the population structure and dynamics of the Borneo orang-utan in relation to its ecology and reproductive strategy; and the social organization and intergroup behavior of *Macaca fascicularis*. This book should be of interest to biologists and primatologists.

Chimeras, Hybrids, and Interspecies Research Andrea L.

Bonnicksen, 2009-09-21 In his 2006 State of the Union speech, President George W. Bush asked the U.S. Congress to prohibit the most egregious abuses of medical research, such as the creation of animal-human hybrids. The president's message echoed that of a 2004 report by the President's Council on Bioethics, which recommended that hybrid human-animal embryos be banned by Congress. Discussions of early interspecies research, in which cells or DNA are interchanged between humans and nonhumans at early stages of development, can often devolve into sweeping statements, colorful imagery, and confusing policy. Although today's policy advisory groups are becoming more informed, debate is still limited by the interchangeable use of terms such as chimeras and hybrids, a tendency to treat all forms of interspecies alike, the failure

to distinguish between laboratory research and procreation, and not enough serious policy justification. Andrea Bonnicksen seeks to understand reasons behind support of and disdain for interspecies research in such areas as chimerism, hybridization, interspecies nuclear transfer, cross-species embryo transfer, and transgenics. She highlights two claims critics make against early interspecies studies: that the research will violate human dignity and that it can lead to procreation. Are these claims sufficient to justify restrictive policy? Bonnicksen carefully illustrates the challenges of making policy for sensitive and often sensationalized research—research that touches deep-seated values and that probes the boundary between human and nonhuman animals.
