Parallel Coordinates Alfred Inselberg, 2009-08-15 This is one book that can genuinely be said to be straight from the horse's mouth. Written by the originator of the technique, it examines parallel coordinates as the leading methodology for multidimensional visualization. Starting from geometric foundations, this is the first systematic and rigorous exposition of the methodology's mathematical and algorithmic components. It covers, among many others, the visualization of multidimensional lines, minimum distances, planes, hyperplanes, and clusters of near planes. The last chapter explains in a non-technical way the methodology's application to visual and automatic data mining. The principles of the latter, along with guidelines, strategies and algorithms are illustrated in detail on real high-dimensional datasets.

Brain and Human Body Modeling Sergey Makarov, Marc Horner, Gregory Noetscher, 2019-08-27 This open access book describes modern applications of computational human modeling with specific emphasis in the areas of neurology and neuroelectromagnetics, depression and cancer treatments, radio-frequency studies and wireless communications. Special consideration is also given to the use of human modeling to the computational assessment of relevant regulatory and safety requirements. Readers working on applications that may expose human subjects to electromagnetic radiation will benefit from this book's coverage of the latest developments in computational modelling and human phantom development to assess a given technology's safety and efficacy in a timely manner. Describes construction and application of computational human models including anatomically detailed and subject specific models; Explains new practices in computational human modeling for neuroelectromagnetics, electromagnetic safety, and exposure evaluations; Includes a survey of modern applications for which computational human models are critical; Describes cellular-level interactions between the human body and electromagnetic fields.

Vibrational Intensities in Infrared and Raman Spectroscopy Willis B. Person, Giuseppe Zerbi, 1982

Vibrationally Mediated Photodissociation Salman Rosenwaks, 2009 Vibrationally Mediated Photodissociation (VMP) deals with the influence of vibrational excitation of the ground electronic state of a molecule on its dissociation following excitation of this state to a higher electronic state. Aimed at students and academics, this is the first book devoted to the effect of vibrational pre-excitation on molecular dynamics in the gas phase. In particular, it deals with the influence of this excitation on the dissociation of molecules (ie: on the branching ratio between the dissociation products and its dependence on the

vibrational state being excited). The effect in the gas phase has been extensively studied, both theoretically and experimentally and encompasses diverse areas of chemical physics. This monograph presents the methodology of VMP, using state-of-the-art specific examples. Overviews of earlier works are included as well, to serve as a background for current research. Wherever appropriate, original works are quoted, including the original drawings. The contents include a brief review of theoretical and experimental methods relevant to VMP and specific examples. Also included are a bibliography, author and subject index. From the description of the motivation, the approach, the execution of the experiment and the analysis of the results of the specific examples, the reader will get a comprehensive understanding of the field. The book is aimed at senior undergraduate and graduate students of chemistry and physics. It serves as an introduction to VMP for beginners and as a literature guide to those acquainted with the subject but not necessarily working on VMP.

Russia in a Changing World Glenn Diesen,Alexander Lukin,2020-04-16 This book explores Russia's efforts towards both adapting to and shaping a world in transformation. Russia has been largely marginalized in the post-Cold War era and has struggled to find its place in the world, which means that the chaotic changes in the world present Russia with both threats and opportunities. The rapid shift in the international distribution of power and emergence of a multipolar world disrupts the existing order, although it also enables Russia to diversify its partnerships and restore balance. Adapting to these changes involves restructuring its economy and evolving the foreign policy. The crises in liberalism, environmental degradation, and challenge to state sovereignty undermine political and economic stability while also widening Russia's room for diplomatic maneuvering. This book analyzes how Russia interprets these developments and its ability to implement the appropriate responses.

Global Governance in Transformation Leonid Grigoryev,Adrian Pabst,2019-09-03 This book analyzes the state of global governance in the current geopolitical environment. It evaluates the main challenges and discusses potential opportunities for compromise in international cooperation. The book's analysis is based on the universal criteria of global political stability and the UN framework of sustainable development. By examining various global problems, including global economic inequality, legal and political aspects of access to resources, international trade, and climate change, as well as the attendant global economic and political confrontations between key global actors, the book identifies a growing crisis and the pressing need to transform the current system of global governance. In turn, it discusses various instruments, measures and international regulation mechanisms that can foster international cooperation in order to overcome global problems. Addressing a broad range of topics, e.g. the international environmental regime, global financial problems, issues in connection with the energy transition, and the role of BRICS countries in global governance, the book will appeal to scholars in international relations, economics and law, as well as policy-makers in government offices and international organizations.

The Political Economy of Pacific Russia Jing Huang,Alexander Korolev,2016-11-08 This thought-provoking book, edited by Jing Huang and Alexander Korolev, redefines the complex political and economic landscape of the Asia-Pacific region. Written by internationally recognized experts from Russia, China, South Korea, Japan, Norway and Singapore, it provides an in-depth analysis of international cooperation in the development of Russia's Far East and Siberia. It explores the geo-economic and geopolitical standing of 'Pacific Russia', and examines both the factors that lie behind, and the mechanisms that allow its integration into Asia. The authors argue that such development is essential for diversifying Russia's economy, but that this turn to Asia is still inconsistent and would benefit from being truly international and multilateral. The protracted crisis in relations

between Russia and the West, they point out, has only made it more significant. This edited volume will appeal to political scientists, economists, scholars of development studies and international relations, and policy-makers.

Climate Change, Sustainable Development, and Human Security Dhirendra K. Vajpeyi, 2013-09-26 The main focus of the book is to analyze pros and cons of the climate change debate among scholars, policy makers and scientist, and its impact on human security in various countries.

Foreign Direct Investment in Russia Anonym, 2017-04-25 Seminar paper from the year 2006 in the subject Economics - Case Scenarios, grade: A-, , language: English, abstract: Foreign direct investment constitutes a highly important part of contemporary world economy. Globalization of international economic relations have led to the situation in which many countries face the necessity to compete with each other and, thus, to enhance their competitiveness through attraction of foreign capital. FDI in this respect appears to be the most desirable option for many economies, as they are more stable than other forms of investment. This papers answers the question of why Russia attracted such a small amount of FDI since the beginning of the transition process. This analysis takes into consideration major determinants of FDI inflow to the country as well as factors of their spatial and sectoral distribution within the state.

Decoding China's Export Miracle: A Global Value Chain Analysis Yuqing Xing, 2021-03-17 In less than three decades, China has emerged as the world's largest exporting nation with more than \$2 trillion exports annually. China's quick rise as a leading exporter in the world is an unprecedented miracle. There are many theories explaining this miracle. This book adopts the global value chain (GVC) approach to analyze the Chinese export miracle over the last four decades. It focuses on the tasks rather than the gross export value and emphasizes the organizations of modern trade rather than the national comparative advantage. The GVC approach systematically explains how, in less than four decades China has evolved from a closed economy to the world's No. 1 exporting nation; why China, a developing country, has exported more high-technology products than labor-intensive products to the US; and why almost half of the US trade deficit has originated from China. The book identifies three spillover effects of GVCs that originated from brands, technology and product innovation, and distribution and retail networks of GVCs lead firms. It argues that China's deep integration with GVCs has been a decisive factor for China's emergence as the world's No.1 exporting nation and the champion of high-technology exports. In addition, this book uses iPhone trade and the operation of Apple, the largest factory-less American manufacturer, to explain how current trade statistics exaggerate China's exports to and its trade surplus with the US on the one hand, and underestimate US exports on the other hand. By using the experience of the Chinese mobile phone industry, the book argues that the GVC strategy can be a short-cut for developing countries to achieve industrialization and enable firms of developing countries to enter high-technology sectors despite their intrinsic disadvantages. At this end, the book also discusses the future trajectory of China-centered GVCs under the shadow of the US-China trade war and the COVID-19 pandemic.
