Food Safety for Farmers Markets: A Guide to Enhancing Safety of Local Foods Judy A. Harrison, 2017-10-20 This book describes practices used on farms and in farmers markets selling foods directly to consumers in U.S. and international markets. It identifies hazards associated with those practices that could put consumers at increased risk for foodborne illness. It also provides tools for identifying hazards on farms and in markets and guidance for establishing food-safe markets. The local food movement, inspired by initiatives such as the USDA's "Know Your Farmer, Know Your Food"; "Farm to School"; "Farm to Pre-school"; and "The People's Garden", is sweeping the country. Nowhere is this interest more evident than at farmers markets. The number of farmers markets has increased almost 400% since the early 1990s, with over 8,600 farmers markets listed in the USDA's market directory in 2016. Many of the customers for local markets are senior adults, people who may have health concerns, and mothers with young children shopping for foods they perceive to be healthier and safer than those available in grocery stores. This means that many of the customers may be in population groups that are most at risk for foodborne illness and the serious complications that can result. In surveys, however, farmers selling directly to consumers self-reported practices that could increase risk for foodborne illnesses. These included use of raw manure as fertilizer without appropriate waiting periods between application and harvest, as outlined in the National Organic Program, a lack of sanitation training for farm workers handling produce, a lack of proper cleaning and sanitizing of surfaces that come in contact with produce, and use of untested surface water for rinsing produce before taking it to market. Surveys of market managers found that many had limited experience and most had no food safety plans for their markets. Observational studies in markets have corroborated self-reported practices that could increase foodborne illness risks, including lack of handwashing, lack of access to well-maintained toilet and handwashing facilities, use of materials that cannot be cleaned and sanitized appropriately, and lack of temperature control for foods that must have time and temperature controlled for safety. These potential food safety risks are not only seen in U.S. farmers markets, but also have been identified in international markets. This book is unique in that it provides evidence-based information about food safety hazards and potential risks associated with farmers markets. It presents an overview of farm and market practices and offers guidance for enhancing food safety on farms and in markets for educators, farmers, producers, vendors and market managers. Dr. Judy A. Harrison is a Professor in the Department of Foods and Nutrition at the University of Georgia (UGA) where she has been named a Walter Bernard Hill Fellow for distinguished achievement in public service and outreach. Serving as a food safety specialist for UGA Cooperative Extension, she has provided 25 years of food safety education for a variety of audiences across the food system.

Handbook of Frontier Markets Panagiotis Andrikopoulos, Greg N. Gregoriou, Vasileios Kallinterakis, 2016-08-05 Handbook of Frontier Markets: The European and African Evidence provides novel insights from academic perspectives about the behavior of investors and prices in several frontier markets. It explores finance issues usually reserved for developed and emerging markets in order to gauge whether these issues are relevant and how they manifest themselves in frontier markets. Frontier markets have now become a popular investment class among institutional investors internationally, with major financial services providers establishing index-benchmarks for this market-category. The anticipation for frontier markets is optimistic uncertainty, and many people believe that, given their growth rates, these markets will be economic success stories. Irrespective of their degrees of success, The Handbook of Frontier Markets can help ensure that the increasing international investment diverted to them will aid in their greater integration within the global financial system. Presents topics in the context of frontier markets and uses tests based on established methodologies from finance research Draws from authors who are established university academics Pays particular attention to financial institutions and applications of financial risk models Explores finance issues usually reserved for developed and emerging markets in order to gauge whether these issues are relevant and how they manifest themselves in frontier markets

South Asian Bond Markets Kiatchai Sophastienphong, Yibin Mu, Carlotta Saporito, 2008
The financial sectors in South Asia Region (SAR) are dominated by commercial banks, which account for the vast majority of the financial system's assets. The domestic debt markets including the government bond and corporate bond markets are at an early stage of development and there are few institutional investors. In recent years, countries in SAR have attempted to develop local debt markets, although the pace of development remains uneven and slow due to many regulatory and institutional impediments. With the notable exception of India, governments in SAR have yet to implement measures required for the proper development of the domestic bond markets. The book provides a comprehensive overview of the major bond markets in SAR (Bangladesh, India, Nepal, Pakistan and Sri Lanka) highlighting the areas which need further reforms. It is hoped that the book will contribute to our knowledge of bond markets in South Asian countries and create a broad based ownership of the recommendations made by the authors.

International Capital Markets, August 2001 Mr. Donald J. Mathieson, Mr. Garry J. Schinasi, 2001-08-22 This paper reports the on-off nature of emerging market access to international capital markets appears to have become a key characteristic of international financial markets. Emerging market borrowers have begun to adapt: when the market for US dollar-denominated bonds has closed, these borrowers turn to the syndicated loan markets, attempt to issue in bonds denominated in euro or yen, or issue in local-currency bond markets. In addition, they employ staff with extensive experience in investment banking and securities trading, exploit "windows of opportunity" to prefund their yearly financing requirement, and engage in debt exchanges to extend the maturity of their debt and avoid a bunching of maturities. The consolidation of financial institutions is driven by attempts to exploit economies of scale and scope, and technological advances such as the Internet and deregulation that facilitate universal banking activities are making it easier to reap such economies. Advances in technology are also transforming the securities trading industry.

The Phenomenon of IPO Underpricing in the European and U.S. Stock Markets
Oliver Reiche, 2013-06-13 Master's Thesis from the year 2013 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, grade: 2.3, University of Duisburg-Essen, course: Energy & Finance, language: English, abstract: The Initial Public Offering (IPO) which marks one of the most important events of a company basically aims to generate maximum proceeds by selling company's shares to investors. Nevertheless, the shares they sell often seem to be underpriced, insofar that the price significantly soars on the first trading day. Consequently, the company generates fewer proceeds and, hence "leaves money on the table." Since the very first detection of this phenomenon in the United States in 1969, several subsequent studies documented the existence of worldwide IPO underpricing nowadays. Considering that underpricing is costly for the company, a question arises why, therefore, despite the fact that the companies "leave money on the table", they do not try to avoid this by setting the issuing price on the very high? One of the most striking features of this question is that it had inspired many researchers who tried to explain in various models why IPOs are generally underpriced. Besides, a lot of theoretical explanations concerning this phenomenon have been given by now; however, no common sense has been so far developed.[...]

The Report: Nigeria 2016 Oxford Business Group, 2016-10-06 Nigeria is the largest economy in Africa with a GDP of \$ 487bn in 2015, according to the World Bank. The country asserted the mantle of the continent's largest economy in 2013, following a rebasing exercise. However, its large population means that Nigeria remains a comparatively poor country in per capita terms, with a lower GDP per capita than several of its sub-Saharan neighbors. Following a real GDP contract of 1.5% in 2016, the IMF forecasts that growth will reach 0.8% in 2017 and 1.9% in 2018. While growth began to pick up in the first half of 2017, Nigeria still has much work to do. However, there is the sentiment that the economy has turned a corner and has begun to see a silver lining. Devaluation of the naira, rising inflation, the drop in oil revenues, the slowdown in oil production, and the leader softening of growth,
