Guidelines on Design and Reporting of Glaucoma Surgical Trials

Tarek Shaarawy,Franz Grehn,2009 It is evident that in the last couple of years there has been a surge of interest in research in the field of glaucoma surgery. This includes research in the improvement of conventional glaucoma surgery; trabeculectomy, and glaucoma drainage devices, as well as research in more recently introduced surgical methods and their emplacement in our range of surgical therapeutic options. Modulation of wound healing, a factor of paramount importance, has also received its share of research interest. More recently, research has embarked on identifying different

surgical approaches and alternative surg ...

Glaucoma Imaging Antonio Ferreras, 2015-10-21 This atlas offers a truly comprehensive update on the use of imaging technologies for the diagnosis and follow-up of glaucoma. In addition to standard automated perimetry, gonioscopy, fundus photography, and stereophotography, other advanced, high-resolution methods for imaging the eye in glaucoma are explained in detail, including ultrasound biomicroscopy, confocal scanning laser ophthalmoscopy, scanning laser polarimetry, and spectral domain optical coherence tomography. The role of the various tests and the keys to optimizing their use in clinical practice are detailed with the aid of high-quality figures in order to enable the reader to achieve the best possible performance when applying these tools. The risk of developing visual disability and blindness as a consequence of glaucoma varies widely among affected individuals. Personalized testing strategies and tailored therapeutic interventions are required to effectively reduce visual impairment due to glaucoma. Glaucoma Imaging will assist residents, researchers, and clinicians in improving their ability to understand and integrate the information obtained using traditional techniques with the reports provided by computer-assisted image instruments.

Glaucoma Norbert Pfeiffer, Thiema Hagen, 2008-06-01 Examining a group of eye diseases that results from a build up of intraocular pressure, this guide describes the optical system and the various causes that lead to glaucoma, highlighting the diagnostic and treatment options available. An interactive multimedia presentation with 3-D and 2-D animations, still images, and illustrations with corresponding

text and audio, this CD-ROM is formatted for MS-Windows operating system.

Age-related macular degeneration (ARMD) Sics

Editore,2014-10-01 Age-related macular degeneration is the most important cause of visual impairment in the elderly. The non-exudative or dry form progresses slowly, the exudative or wet form rapidly (within weeks or months). Refer a patient with suspected exudative form of the disease without delay for investigations and treatment. Also consider the significance of the disease in the patients' daily life.

A Vision of Africa's Future Giovanni Carbone, Africa is a fast-changing continent and an area of rising global relevance, where major transformation processes are currently underway, from demographic expansion to economic development, from social progress to environmental challenges, from technological innovation to continental integration, from political change to migratory pressures. How will these complex transformations shape the Africa of tomorrow? This Report sets out a vision for Africa's future based on five key traits: an archipelago of heterogeneous growth trajectories; the revolutionary impact of technological leapfrogging; regional integration and the growing role of sub-regional processes; the clustering of instability mainly around the core of the region; and the migration movements that originate from – but also predominantly remain within – the African continent.

Refractive Cataract Surgery John A. Hovanesian, John Hovanesian, MD Facs,2017 Updated and expanded, the Second Edition of Refractive Cataract Surgery: Best Practices and Advanced Technology is a practical guide for cataract surgeons and general ophthalmologists who wish to take their practices to a new level by offering refractive

solutions to their cataract patients.

Atlas of Confocal Laser Scanning In-vivo Microscopy in Ophthalmology R.F. Guthoff, C. Baudouin, J. Stave, 2007-05-16 This lavishly illustrated atlas demonstrates normal in-vivo anatomy of the cornea, limbus, and conjunctiva; quantifies various cellular structures using cell-density calculations; and establishes correlations between novel optical sections of various diseases of the ocular surface and clinical findings. It also describes early signs of different eye diseases and supports the reader in diagnostic and therapeutic management.

Femtosecond Laser Surgery in Ophthalmology H. Burkhard Dick, Ronald D. Gerste, Tim Schultz, 2018-02-07 The femtosecond laser has emerged as a groundbreaking game-changer in ophthalmic surgery. It was first introduced for corneal refractive surgery in flap creation during LASIK, and subsequently for cataract surgery in 2008. The femtosecond laser cuts deeply on a single plane without collateral damage. Its high precision and safety result in excellent outcomes in the hands of experienced eye surgeons, benefiting virtually everyone. Femtosecond Laser Surgery in Ophthalmology fills an unmet need for a comprehensive, up-to-date resource on growing applications of this state-of-the-art technology. H Burkhard Dick is a world-renowned pioneer who has performed more than 6,000 laser cataract operations. Readers will benefit from his keen insights along with the collective expertise of co-authors Tim Schultz, Ronald D. Gerste, and a cadre of top-notch contributors. Twenty-nine chapters encompass basic physics, refractive and therapeutic cornea treatment, various aspects of laser cataract surgery, and patient selection. Key Features Clinical pearls, outcomes, and complications management in femtosecond laser-assisted in situ keratomileusis surgery Discussion of crucial steps including

capsulotomy, lens fragmentation, and corneal incisions The use of the femtosecond laser for presbyopia, pediatric cataract surgery, and ocular comorbidities Extensive videos posted in the Thieme MediaCenter further elucidate techniques More than 300 high quality illustrations and photos add a rich visual dimension This practical book provides in-depth knowledge on the applications of femtosecond laser surgery, enabling cataract and refractive surgeons to incorporate these techniques into daily practice. Ophthalmologists and ophthalmology fellows and residents will discover an invaluable resource for specialized training.

Advanced IOL Fixation Techniques David F. Chang,Bryan S. Lee,Amar Agarwal,2019 Advanced IOL Fixation Techniques: Strategies for Compromised or Missing Capsular Support provides this much-needed resource with more than 70 different chapters that cover the wide array of surgical approaches. Among the contributors are many of the original innovators of the most important technologies and methodologies. In addition to teaching a specific surgical technique, these authors cover its history, rationale, and clinical

results.

Phaco Chop David F. Chang, 2004 *Phaco Chop: Mastering Techniques, Optimizing Technology, and Avoiding Complications* covers everything from step-by-step instruction for the beginner to advanced chopping for complicated cases or bimanual phaco. As the first text completely devoted to this popular topic, it is equally relevant to transitioning surgeons and to those already experienced with chopping. *Phaco Chop* has four major sections, beginning with a detailed guide for learning phaco chop and its main variations. David F. Chang, MD along with contributing authors Randall J. Olson, MD; Louis D. Skip Nichamin, MD; and Barry S. Seibel, MD outline their pearls based upon years of experience in teaching residents and transitioning surgeons. The second section is devoted to the phacodynamics of chopping-the general principles of instrumentation and configuring machine parameters. As a unique feature, four separate chapters are specifically devoted to optimizing the Legacy, Infiniti, Sovereign, and Millennium machines for chopping. Strategies for managing complicated cases and complications comprise the primary focus for the third section. While chopping techniques are

particularly advantageous for complicated cataracts, they must be integrated with other devices and strategies. Newer strategies for posterior capsule rupture include the Viscoat PAL, Viscoat Trap, and the pars plana anterior vitrectomy. These options are relevant for any phaco surgeon, regardless of technique or experience. The last section explores a topic that is generating growing interest - bimanual phaco. This is a promising and advanced application that combines phaco chop with the latest innovations in micro-incisional phaco technology. Additionally, a DVD is included containing 2 hours of instructional video that complement and supplement the text. Together with the many high-resolution operative photographs, this paired format overcomes the limitations of learning new and advanced surgical techniques from a text alone. With its comprehensive and integrated emphasis on advanced surgical techniques, optimizing phaco technology, and complication management, Phaco Chop appeals equally to beginning surgeons and residents, as well as high volume surgeons eager to improve their skills. Four Main Sections: Techniques for performing and transitioning to phaco chop Optimizing machine settings for chopping techniques Strategies for complicated cataracts, and for managing complications Applications for bimanual phaco

Mastering Refractive IOLs David F. Chang, 2008 The IOL technical specifications, the clinical data, and the necessary clinical and surgical skills comprise the scientific foundation for achieving a premium refractive outcome. To consistently achieve patient satisfaction, however, requires mastering the art of patient and IOL selection, communicating and counseling effectively, and providing a premium patient experience. This is a nontraditional book in which multiple experts are separately asked to discuss controversial subjects

in a reader-friendly format. There is balanced coverage of all of the available refractive IOLs, as well as those that may become available in the near future. A major emphasis is placed on avoiding and managing complications or potentially dissatisfied patients. There are more than 200 chapters that are organized into 14 major sections, over 300 images, 100 tables, and 12 sidebars that cover every aspect of refractive IOL clinical practice. This is a comprehensive educational resource addressing the most demanding and rapidly evolving area in cataract and refractive surgery today and the first book to cover both the clinical and nonclinical aspects of offering refractive IOL services.
