Stone Rain Linwood Barclay,2007-05-01 Metropolitan newspaper writer Zack Walker has a knack for stumbling onto deadly stories. But it's one that his good friend Trixie Snelling doesn't want told that's about to unleash a storm of trouble. As a professional dominatrix in the suburbs, Trixie has her share of secrets, but Zack has no idea what she's really hiding when a local newspaperman threatens to do an exposé on her...not until Zack finds a dead body strapped to the bondage cross in her basement dungeon. Now Zack is implicated in a murder, Trixie is missing, and everything he thought he knew about his friend, his town, even his own marriage, reveals a darker side. Zack's twisted trail to the truth will lead to a long-unsolved triple homicide, bikers, drug wars, and a stone-cold killer hell-bent on revenge. It's a story that's already cost him his job and possibly his wife, and, if Zack's not very lucky, it will cost him his life.

Stone Adam Roberts,2010-09-09 Sprung from a prison in the centre of a star, the universe's last criminal is employed to kill the population of a planet. It is a crime that will tear apart an interstellar utopia. Keeping ahead of detection and preparing the crime, the killer voyages to numerous worlds and hones the instincts required for murder. And wonders who is behind the contract. Roberts' new novel is an extraordinary fusing of ideas, exotic locations, personal drama and an enquiry into the nature of crime in a society that thinks it has forgotten how to commit it.

Black Stone Chronicles Michael Black,2012-09-01 How it all Started It all started, or I guess you could say it did, on the last week of summer when most kids would be ending their vacations at the beach or getting back home from visiting their relatives, and, of course, dreading the thought of the coming of the new school year. However, some are not quite as lucky in that area as others are, like those who attended the same school as the main character of this book. It was on that day that a thirteen-year-old boy woke up and stared out of the window of his small bleak room. His skin was a light brown almost caramel complexion, and his hair was short and black, pressed down against his scalp. His eyes were a dark brown, with a ring of black edged around the Pupil. If you looked closely in the center of the darkness there was a small spark of golden light, barely noticeable, like staring at the heart of the Universe through an infinite expanse of space.

The Complete Book on Construction Materials NPCS Board of Consultants & Engineers,2007-01-01 Construction industry is the largest consumer of material resources, of both the natural ones (like stone, sand, clay, lime) and the processed and synthetic ones. Each material which is used in the construction, in one form or the other is known as construction material (engineering material). No material, existing in the universe is useless; every material has its own field of application. Stone, bricks, timber, steel, lime, cement, metals etc. are some commonly used materials by civil engineers. Selection of building material, to be used in a particular construction, is done on the basis of strength, durability, appearance and permeability. The stone which is used in the construction works, in one form or another is always obtained from the rocks. The rocks may be classified in four ways; geological classification, physical classification, chemical classification and classification based on hardness of the stone. Various king of rocks come under these classification for example; igneous rocks, plutonic rocks, sedimentary rocks, silicious rocks, stratified rocks etc. brick is the most commonly used building material which is light, easily available, uniform in shape and size and relatively cheaper except in hilly areas. Bricks are easily moulded from plastic clays, also known as brick clays or brick earth. Bricks can be moulded by any of the three methods; soft mud process, stiff mud process and semi dry process. There are various kinds of bricks; specially shaped bricks, burnt clay bricks, heavy duty bricks, sand lime bricks, sewer bricks, refractory bricks, acid resistant bricks etc. lime is an important building material, it has been used since ancient times. Lime is used as a binding material in mortar and concretes, for plastering, for manufacturing glass, for preparing lime sand bricks, soil stabilization etc. Concrete is a construction material obtained by mixing a binder (such as cement, lime, mud etc.), aggregate (sand and gravel or shingle or crushed aggregate), and water in

certain proportions. Based on the binding materials, the common concretes can be classified as; mud concrete, lime concrete, cement concrete and polymer concrete. World demand for cement and concrete additives is projected to increase 8.3 percent annually in next few years. This book basically deals with rock and stone, formation of rocks, classification of rocks, geological classification, metamorphism physical classification of rocks, chemical classification, classification based upon hardness of the stone composition of stone (rock forming minerals), igneous rock forming minerals, sedimentary rock forming minerals, texture of the rocks, types of fractures of rock, uses of stone, natural bed of stone, aluminium and magnesium alloys, mechanical properties of a partially cured resin, DMA characterization, chemical advancement of a partially cured resin, differential scanning calorimeter characterization, chemical mechanical relations, moisture content as a variable, wetability and water repellency of wood, fungal and termite resistance of wood etc. The book provide wide coverage of building materials such as stone, bricks, lime, mortars, concrete, asbestos, gray iron, cast iron, steel castings, aluminium, wood, architectural paints and so many others with their applications in building construction. The book is resourceful for all professionals related to construction field, technocrats, students and libraries.
