Optimization for Machine Learning Jason Brownlee,2021-09-22 Optimization happens everywhere. Machine learning is one example of such and gradient descent is probably the most famous algorithm for performing optimization. Optimization means to find the best value of some function or model. That can be the maximum or the minimum according to some metric. Using clear explanations, standard Python libraries, and step-by-step tutorial lessons, you will learn how to find the optimum point to numerical functions confidently using modern optimization algorithms.

Advances in Acoustic Microscopy Andrew Briggs,2013-11-11 In 1992 Acoustic Microscopy was published by Oxford University Press, in the series of Monographs on the Physics and Chemistry of Materials. Reviews appeared in the Journal of Microscopy [169 (1), 91] and in Contemporary Physics [33 (4), 296]. At the time of going to press, it seemed that the field of acoustic microscopy had settled down from the wonderful developments in resolution that had been seen in the late seventies and the early eighties and from the no less exciting developments in quantitative elastic measurements that had followed. One reviewer wrote, The time is ripe for such a book, now that the expansion of the subject has perceptively slowed after it was detonated by Lemons and Quate. [A. Howie, Proc. RMS 27 (4), 280]. In many ways, this remains true. The basic design for both imaging and quantitative instruments is well-established; the upper frequency for routine imaging is the 2 GHz established by the Ernst Leitz scanning acoustic microscope (ELSAM) in 1984. For the most accurate V(z) measurements, the 225-MHz line-focus-beam lens, developed at Tohoku University a little before then, remains standard. The principles of the contrast theory have been confirmed by abundant experience; in particular the role of surface acoustic waves, such as Rayleigh waves, dominates the contrast in most high resolution studies of many materials.

How to Wreck or Save a Church EDG Smith,2023-08-25 This book is a collection of vignettes. The vignettes, while based on actual events, have (in most cases) been presented in a humorous manner and with a touch of artistic license. These vignettes provide lessons that can be learned, for the clergy, the diocese, the music directors, the staff, the church elders, and the congregants. Although the vignettes are about Orthodox, Jewish, Catholic, and Protestant houses of worship, I have masked the identity of the denominations. It is important to note that the vast majority of clergy, staff, and elders are dedicated to their profession, or position. The examples in this book are about those individuals who shouldn't have been in any religious leadership position.

A New Theory of Cultural Archetypes David Midgley,Sunil Venaik,Demetris Christopoulos,2023-04-23 This book overcomes the limitations of existing models of national culture by presenting a novel archetypal methodology that captures heterogeneity within and between nations in a simple manner. The authors incorporate this methodology into a new, empirically derived theory of nations as composites of diverse culture configurations (or archetypes). The theory, which is illustrated through data on secular and emancipative values obtained from the European and World Value Surveys, shows the unity and diversity of these values across 117 nations, and identifies trends in global culture over four decades. Based on the authors' research, the book argues that universal archetypes capture the unity and diversity of the global cultural mosaic with precision and fidelity. By reflecting the reality of changing culture around the world with greater clarity, the book's novel approach provides a comprehensive lens for international business scholars, practitioners, and policy makers to view, understand and explain culture-related phenomena.

Sedentary Behaviour Epidemiology Michael F. Leitzmann,Carmen Jochem,Daniela Schmid,2024-03-14 This book addresses the origins, determinants and magnitude of the global problem of sedentary behaviour, along with concise yet in-depth solutions for tackling it. As a consequence of major technological advances in modern society, many people find themselves in environments characterized by prolonged sedentary behaviour. Building on the contributions of leading experts in the field, the new edition of this book presents updated knowledge about sedentary behaviour, its medical and public health significance, its correlates and determinants, measurement techniques, and recommendations for addressing this behaviour at the individual, community, environmental, and policy level. The book encompasses current research linking the COVID-19 pandemic to increased levels of sedentary behavior, and it covers global and planetary health aspects of sedentary behavior, highlighting sustainable development goals such as health and well-being for all. Applying a cross-disciplinary methodology, the book avoids considering physical activity and sedentary behavior as a single continuum, which potentially hampers progress in confronting widespread levels of sedentariness. Rather, the book helps readers better understand how sedentary and physically active behavior co-occur and how the two behaviours have distinct contributing factors. Building on the contributions of distinguished international experts in the field, this thorough resource is a valuable asset and challenges professionals, researchers, students, and practitioners alike to adopt new strategies and expand their reach.

Horizontal Equity, Uncertainty, and Economic Well-being Martin David,Timothy Smeeding,2009-02-15 The result of a National Bureau of Economic Research Income and Wealth conference held in December 1983, this volume looks at the concept of economic well-being and the ways that analysts have tried to measure it. In addition to income, economists have begun to consider such factors as pensions, wealth, health, and environment when measuring the well-being of a particular group. They have also begun to measure how consumers respond, successfully or unsuccessfully, to such economic uncertainties as inflation, divorce, and retirement. Using new data and techniques, the contributors to this book concentrate on issues of uncertainty and horizontal equity (the equal treatment of individuals within a defined group). Their work points to better ways of determining how various groups in a society are faring relative to other groups. Economists and policy analysts, therefore, will be in a better position to determine how government programs should be applied when well-being is used as a test.

Operations Research '91 Peter Gritzmann,Rainer Hettich,Reiner Horst,Ekkehard Sachs,2012-12-06 The volume comprises a collection of 172 extended abstracts of talks presented at the 16th Symposium on Operations Research held at the University of Trier in September 1991. It is designated to serve as a quickly published documentation of the scientific activities of the conference. Subjects and areas touched upon include theory, modelling and computational methods in optimization, combinatorial optimization and discrete mathematics, combinatorial problems in VLSI,

scientific computing, stochastic and dynamic optimization, queuing, scheduling, stochastics and econometrics, mathematical economics and game theory, utility, risk, insurance, financial engineering, computer science in business and economics, knowledge engineering and production and manufacturing.

Population Psychology Sidney H. Newman, Vaida D. Thompson, 1976 The Center for Population Research has a deep and continuing interest in encouraging population research by psychologists and in educating psychologists in population. This book delineates population-psychology in the process of development from very small beginnings in 1969-70. It demonstrates how psychologists have developed interests in population because of its great importance to the United States and all the other countries in the world, as well as because of the relevance of population to psychology and vice versa. Psychologists are using their backgrounds, theories, and methodologies to study significant population issues and problems. The papers in this book represent pioneering efforts from 1972 to 1975. While not covering all the kinds of population research being done by psychologists, they do present an excellent picture of the range, scope, and diversity of the significant work being done. It is hoped that the articles in this book will stimulate more psychologists to become involved in population research and inspire those now in the field to still greater efforts.

Stresses what quality parameters can be improved and which ones should be rectified first. This edition includes numerous modern methods and the latest developments in time-proven techniques.

Estimating Tree Biomass Regressions and Their Error, 1987 Proceedings of a workshop co-sponsored by the USDA Forest Service, the State University of New York, and the Society of American Foresters. Presented were papers on the methodology of sample tree selection, tree biomass measurement, construction of biomass tables and estimation of their error, and combining the error of biomass tables with that of the sample plots or points. Also presented were papers on various aspects of biomass research currently being conducted in the United States, Canada, and abroad.

Microdistribution of Foraminifera in a Single Bed of the Monterey Formation, Monterey County, California Roberta K. Smith, Martin A. Buzas, 1986 While several papers exist on the small scale spatial distribution of living foraminifera, almost no work exists on the small scale spatial distribution of fossils. The present study took 24 (5 ml) replicates 10 cm apart along one bed of the Monterey Formation in California. The mean density for all replicates is 6084.96 with a standard deviation of 8776.95. Both inspection and a cluster analysis of the data indicate replicates 20-24 have a much higher density and different rank order of abundance than replicates 1-19. The mean density for the total of all species in replicates 1-19 is 2387.47 with a standard deviation of 1175.58. For replicates 20-24 the mean density is 20135.40 with a standard deviation of 11181.40. The spatial variability is so great that four replicates (more than commonly taken) would only allow us to be 95% confident that we are within 50% of the true mean. Because age determination is based on presence of particular taxa rather than on densities, stratigraphic assignment would still be possible. The three species dominating the 1-19 group make up from 86% to 99% of the fauna. The three species dominating the 20-24 group make up from 77% to 85% of the fauna. Two of these are also dominant in the 1-19 group, but the most dominant species in the 20-24 group constitutes only
