SIMILAR Dreams Similar,2005 This book presents the SIMILAR European research consortium in the field, the work under way and the great challenges posed by the development of the future multimodal interfaces.

Random Geometrically Graph Directed Self-Similar Multifractals
Lars Olsen,2017-07-12 Multifractal theory was introduced by theoretical physicists in 1986. Since then, multifractals have increasingly been studied by mathematicians. This new work presents the latest research on random results on random multifractals and the physical thermodynamical interpretation of these results. As the amount of work in this area increases, Lars Olsen presents a unifying approach to current multifractal theory. Featuring high quality, original research material, this important new book fills a gap in the current literature available, providing a rigorous mathematical treatment of multifractal measures.

Similar Hearts Africa Timothy Lehman, 2021-12-10 It's Time To Dream Big For Everything God Has Purposed In Marriage! In our society today, we have lost the sense of the true purpose of marriage as God originally imagined, designed, and initiated it. We have also lost a significant measure of appreciation for the incredible wonder, beauty, mystery, and adventure which God has supernaturally placed within the marriage covenant relationship. Are you willing to settle for normal, or do you want His extraordinary for your life and marriage? Do you desire to experience the unlimited potential God has built into every marriage lived His way? Are you ready to believe God can do the impossible in your life? Do you believe that there is someone out there whose heart is very similar to yours? Do you want to see God show up and supernaturally transform hearts and lives all around you through the example of your marriage? • Explore and expand your understanding of the true purpose of marriage • Prepare your heart as you listen, wait, watch, and pray about what comes next • Examine how you see and relate to your beloved and

how that affects your relationship • Let yourself, your beloved, everyone else, and God out of your limited boxes • Dare to dream big for your present or future marriage • Press in, and keep trusting God with all of your hopes, plans, dreams, and questions

Similar but Different Janusz Czebreszuk, 2014-01-01 The book “Similar but Different. Bell Beakers in Europe” deals with a cultural phenomenon, known as the Bell Beaker culture, that during the 3rd millennium B.C. was present throughout Western and Central Europe. This development played an important role in the formation of the Bronze Age at the turn of the 3rd and the 2nd millennium BC. This book consists of 10 chapters – in each a specific issue is discussed connected with Bell Beakers. The chapters are divided into three parts concerning consecutively: general problems, issues of the so-called common ware and the character of the Bell Beakers in particular places in Europe. The reader can become acquainted with interpretations of the whole phenomenon, based on inter-regional similarities – the works of H. Case, M. Vander Linden, L. Salanova, and R. Furestier. The second part consist of the chapters by Ch. Strahm, M. Besse and V. Leonini that focus on the matter of the so-called common ware: some ceramic vessels, which are not part of the ‘beaker set’, but accompany it in many regions. That is one of the Bell Beakers’ analytical problems, which is still argued about. The three last chapters show the specific features of some regional centers, where Bell Beakers developed, the attention was focused on the Bell Beakers’ localities’. These are the works of A Gibson (Britain), O. Lemerrier (Mediterranean France) and L. Sarti (central Italy). The

book shows the basic features of the Bell Beaker culture in Europe. These however are still a challenge for researchers, because the phenomenon had two faces. On the one hand it is characterized by a set of material culture which is occurring in many places Western and Central Europe. On the other hand, in specific areas, these features were relatively easily influenced by the local environment, they got some sort of regional particularities. That is the essence of the Bell Beakers, hence the title of this book: ‘similar but different’. This book is a reprint, the first edition was published in 2004 by the Adam Mickiewicz University, Poznań.

Self-similar and Self-affine Sets and Measures Balázs

Bárány, Károly Simon, Boris Solomyak, 2023-11-16 Although there is no precise definition of a “fractal”, it is usually understood to be a set whose smaller parts, when magnified, resemble the whole. Self-similar and self-affine sets are those for which this resemblance is precise and given by a contracting similitude or affine transformation. The present book is devoted to this most basic class of fractal objects. The book contains both introductory material for beginners and more advanced topics, which continue to be the focus of active research. Among the latter are self-similar sets and measures with overlaps, including the much-studied infinite Bernoulli convolutions. Self-affine systems pose additional challenges; their study is often based on ergodic theory and dynamical systems methods. In the last twenty years there have been many breakthroughs in these fields, and our

aim is to give introduction to some of them, often in the simplest nontrivial cases. The book is intended for a wide audience of mathematicians interested in fractal geometry, including students. Parts of the book can be used for graduate and even advanced undergraduate courses.

Drosophila melanogaster, Drosophila simulans: So Similar, So Different Pierre Capy, Patricia Gibert, Ian Boussy, 2012-12-06 This book brings together most of the information available concerning two species that diverged 2-3 million years ago. The objective was to try to understand why two sibling species so similar in several characteristics can be so different in others. To this end, it was crucial to confront all data from their ecology and biogeography with their behavior and DNA polymorphism. *Drosophila melanogaster* and *Drosophila simulans* are among the two sibling species for which a large set of data is available. In this book, ecologists, physiologists, geneticists, behaviorists share their data on the two sibling species, and several scenarios of evolution are put forward to explain their similarities and divergences. This is the first collection of essays of its kind. It is not the final point of the analyses of these two species since several areas remain obscure. However, the recent publication of the complete genome of *D. melanogaster* opens new fields for research. This will probably help us explain why *D. melanogaster* and *D. simulans* are sibling species but false friends.

General Relativistic Self-similar Waves that Induce an Anomalous Acceleration Into the Standard Model of Cosmology Joel Smoller, Blake Temple, 2012 The authors prove that the Einstein equations for a spherically symmetric spacetime in Standard Schwarzschild Coordinates (SSC) close to form a system of three ordinary differential

equations for a family of self-similar expansion waves, and the critical ($k=0$) Friedmann universe associated with the pure radiation phase of the Standard Model of Cosmology is embedded as a single point in this family. Removing a scaling law and imposing regularity at the center, they prove that the family reduces to an implicitly defined one-parameter family of distinct spacetimes determined by the value of a new acceleration parameter a , such that $a=1$ corresponds to the Standard Model. The authors prove that all of the self-similar spacetimes in the family are distinct from the non-critical $k \neq 0$ Friedmann spacetimes, thereby characterizing the critical $k=0$ Friedmann universe as the unique spacetime lying at the intersection of these two one-parameter families. They then present a mathematically rigorous analysis of solutions near the singular point at the center, deriving the expansion of solutions up to fourth order in the fractional distance to the Hubble Length. Finally, they use these rigorous estimates to calculate the exact leading order quadratic and cubic corrections to the redshift vs luminosity relation for an observer at the center.
