The Mud Elephant Venkat Rajan, Veeran, a ten-year-old boy, is caught in the vicious cycle of poverty and prejudice. He lives in Varambiam, an obscure village in southern Tamil Nadu, India, subjected to caste distinctions and tending to the everyday chores of the village Zamindar. The village chief however, has now lost all his wealth and faded into oblivion. Bala, the ten-year-old grandson of the patriarch, visits the village house to escape the squalid ghetto and travails of daily living faced by his family in the big city, Chennai. Bala finds a friend in Veeran, in Sevapan the family steer who is deaf, in Tiger – the dog who is the stolid guardian of the family, and in Joseph – the railway gatekeeper with his utopian socialist leanings. Bala silently witnesses the consequences of his family's hubristic past and the state of ignominy the village head is pushed into. The boys of Varambiam share important life lessons and make a secret wish. Bala, now a grown man, has moved to Mumbai with his wife. Will he ever meet with Veeran again? Will their secret wish come true? "Venkat Rajan paints a colorful vignette in 'The Mud Elephant'. A distinct Indian coloring at it. The tone is humorous, detached and ironic. Rajan as a raconteur, actually unfolds a Dickensian narrative, providing a social context and an amazing feel for his characters." Joy Augustine, Filmmaker

**The Tangled Knot** C. Venkat Krishna,Dr C Venkat Krishna and K Babu Rao,2015-08-24 The Tangled Knot is a story that spans but just half a decade, in the vibrant journey of Aslesha and Arun, straddling their eventful life in New York City, and New Delhi, mirroring the aspirations of millions of young working professionals. It is a short saga of how a bagful of virtues is rendered ineffective by a lone inadequacy, and how a chastening experience transmutes their lives and rekindles the warmth. It is the story of how an intelligent, value-based, and elegant Aslesha could not live with the mindless neglect of her workaholic husband, Arun. It is neither a love story nor a story of love. It is just their life story. Perhaps, it could be yours.

However, in India, Politics is being used for everything except national service. That is the reason why politics in India is nothing but corruption, bribery, brutal methods to achieve power and manipulation to use the power to make politics into a business. A farmer's son wants to be a mathematician, yet unfortunately, has to change his goal to give shape to his ambition and desire to demolish, destroy and purge the corrupted political system, to make his nation an energetic economic system in the world.Welcome to iThe Insurrection Journey', a debut fiction novel, that does not happen in a democracy. It is a story of love and insurrection, of

*Machine Learning Algorithms From Scratch with Python* Jason Brownlee, 2016-11-16 You must understand algorithms to get good at machine learning. The problem is that they are only ever explained using Math. No longer. In this Ebook, finally cut through the math and learn exactly how machine learning algorithms work. Using clear explanations, simple pure Python code (no libraries!) and step-by-step tutorials you will discover how to load and prepare data, evaluate model skill, and implement a suite of linear, nonlinear and ensemble machine learning algorithms from scratch.

**Framework for Value Management Practice** Michel Thiry, 2013-10-01 A Framework for Value Management Practice—Second Edition begins by providing readers with the background needed to understand the origins of this complex and rapidly evolving practice. The second chapter builds on this foundation, by helping readers understand how the deceptively simple concept of value is actually a complex interweaving of factors that include time, people, subject and circumstance. Dr. Thiry then walks the reader step by step through the complexities of different value methodologies. The updated third chapter describes tools and techniques that can be used to achieve the objectives of a value study, including the latest integrative techniques. The fourth chapter, which has been completely rewritten, covers value integration as seen within an Organizational Project Management (OPM) context.

OPTIMIZATION FOR ENGINEERING DESIGN KALYANMOY DEB, 2012-11-18 This well-received book, now in its second edition, continues to provide a number of optimization algorithms which are commonly used in computer-aided engineering design. The book begins with simple single-variable optimization techniques, and then goes on to give unconstrained and constrained optimization techniques in a step-by-step format so that they can be coded in any user-specific computer language. In addition to classical optimization methods, the book also discusses Genetic Algorithms and Simulated Annealing, which are widely used in engineering design problems because of their ability to find global optimum solutions. The second edition adds several new topics of optimization such as design and manufacturing, data fitting and regression, inverse problems, scheduling and routing, data mining, intelligent system design, Lagrangian duality theory, and quadratic programming and its extension to sequential quadratic programming. It also extensively revises the linear programming algorithms section in the Appendix. This edition also includes more number of exercise problems. The book is suitable for senior undergraduate/postgraduate students of mechanical, production and chemical engineering. Students in other branches of engineering offering optimization courses as well as designers and decision-makers will also find the book useful. Key Features Algorithms are presented in a step-by-step format to facilitate coding in a computer language. Sample computer programs in FORTRAN are appended for better comprehension. Worked-out examples are illustrated for easy understanding. The same example problems are solved with most algorithms for a comparative evaluation of the algorithms.

*Vermeer's Wager* Ivan Gaskell, 2000-10-01 *Vermeer's Wager* stands at the intersection of art history and criticism, philosophy and museology. Using a familiar and celebrated painting by Johannes Vermeer as a case study, Ivan Gaskell explores what it might mean to know and use a work of art. He argues that art history as generally practiced, while successfully asserting certain claims to knowledge, fails to take into account aspects of the unique character of works of art. Our relationship to art is mediated, not only through reproduction – particularly photography – but also through displays in museums. In an analysis that ranges from seventeenth-century Holland, through mid-nineteenth-century France, to artists' and curators' practice today, Gaskell draws on his experience of Dutch art history, philosophy and contemporary art criticism. Anyone with an interest in Vermeer and the afterlife of his art will value this book, as will all who think seriously about the role of photography in perception and the core purposes of art museums.

*Genetic Algorithms and Engineering Design* Mitsuo Gen, Runwei Cheng, 1997-01-21 The last few years have seen important advances in the use of genetic algorithms to address challenging optimization problems in industrial engineering. Genetic Algorithms and Engineering Design is the only book to cover the most recent technologies and their application to manufacturing, presenting a comprehensive and fully up-to-date treatment of genetic algorithms in industrial engineering and operations research. **Princes of the Renaissance** Orville Prescott, 2019-07-02 Originally published in 1970, this book offered a fresh look at the triumph and turmoil of the Renaissance by examining the lives and power of the princes of Italy, who ruled the many independent states and who dominated the society which nurtured the

Renaissance painters, sculptors, writers and architects. The book discusses their magnificence, deceit and cruelty, their cultivation and moral corruption and includes specific chapters on Francesco Sforza, Duke of Milan, Ercole d'Este, Pope Julius II and Sigismondo Malatesta.

**Foundations of Genetic Algorithms** Alden H. Wright, Michael D. Vose, Kenneth A. De Jong, Lothar M. Schmitt, 2005-07-01 The 8th Workshop on the Foundations of Genetic Algorithms, FOGA-8, was held at the University of Aizu in Aizu-Wakamatsu City, Japan, January 5–9, 2005. This series of workshops was initiated in 1990 to encourage further research on the theoretical aspects of genetic algorithms, and the workshops have been held biennially ever since. The papers presented at these workshops are revised, edited and published as volumes during the year following each workshop. This series of (now eight) volumes provides an outstanding source of reference for the theoretical work in this field. At the same time this series of volumes provides a clear picture of how the theoretical research has grown and matured along with the field to encompass many evolutionary computation paradigms including evolution strategies (ES), evolutionary programming (EP), and genetic programming (GP), as well as the continuing growth in interactions with other fields such as mathematics, physics, and biology. A tradition of these workshops is to organize them in such a way as to encourage lots of interaction and discussion by restricting the number of papers presented and the number of attendees, and by holding the workshop in a relaxed and informal setting. This year's workshop was no exception. Thirty-two researchers met for 3 days to present and discuss 16 papers. The local organizer was Lothar Schmitt who, together with help and support from his university, provided the workshop facilities. After the workshop was over, the authors were given the opportunity to revise their papers based on the feedback they received from the other participants.

**Plant and Human Health, Volume 1** Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60,000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today, around 1.4 billion people in South Asia alone have no access to modern health care, and rely instead on traditional medicine to alleviate various symptoms. On a global basis, approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life-threatening conditions that include diabetes, hypertension and cancers. As the demand for plant-based medicine rises, there is an unmet need to investigate the quality, safety and efficacy of these herbals by the "scientific methods". Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical, and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the search for compounds, which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high-throughput bioassays, and the scaling-up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant-based therapeutics. The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of

this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it focuess on the secondary metabolic compounds, which afford protection against diseases. Lastly, Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together this three-volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners, and students and researchers in botany and horticulture.

**The Langurs of Abu** Sarah Blaffer Hrdy,1980 Sexual combat is not a monopoly of the human species. As Sarah Blaffer Hrdy argues in this spellbinding book, war between male and female animals has deep roots in evolutionary history. Her account of family life among hanuman langurs--the black-faced, gray monkeys inhabiting much of the Indian subcontinent--is written with force, wit, and at times, sorrow. Male hanumans, in pursuit of genetic success, routinely kill babies sired by their competitors. The mothers of endangered infants counter with various strategems to deceive the males and prevent destruction of their own offspring. Competition and selfishness are dominant themes of langur society. Competition among males for access to females, competition among females for access to food resources, and disregard by one female for the well-being of another's infant--these are some very common examples. Yet there are also moments of heroic self-sacrifice, as when an elderly female rushes to defend her troop and its babies from an invading, infanticidal male. *The Langurs of Abu* is the first book to analyze behavior of wild primates from the standpoint of both sexes. It is also a poignant and sophisticated exploration of primate behavior patterns from a feminist point of view. This book may inspire controversy; it will certainly be read with pleasure by anyone interested in animal behavior. Richly illustrated with photographs, seven in full color.

**The Clinton Tapes** Taylor Branch,2009-09-29 Former President Bill Clinton speaks intimately over seven years to his long-time friend, a Pulitzer Prize-winning historian, about what it's like to be president. Providing illuminating commentaries on major issues, these conversations depict Clinton as a principled man with a restless intellect. b&w photographs.
