Intelligent Autonomy of UAVs Yasmina Bestaoui Sebbane,2018-03-14 Intelligent Autonomy of UAVs: Advanced Missions and Future Use provides an approach to the formulation of the fundamental task typical to any mission and provides guidelines of how this task can be solved by different generic robotic problems. As such, this book aims to provide a systems engineering approach to UAV projects, discovering the real problems that need to be resolved independently of the application. After an introduction to the rapidly evolving field of aerial robotics, the book presents topics such as autonomy, mission analysis, human-UAV teams, homogeneous and heterogeneous UAV teams, and finally, UAV-UGV teams. It then covers generic robotic problems such as orienteering and coverage. The book next introduces deployment, patrolling, and foraging, while the last part of the book tackles an important application: aerial search, tracking, and surveillance. This book is meant for both scientists and practitioners. For practitioners, it presents existing solutions that are categorized according to various missions: surveillance and reconnaissance, 3D mapping, urban monitoring, precision agriculture, forestry, disaster assessment and monitoring, security, industrial plant inspection, etc. For scientists, it provides an overview of generic robotic problems such as coverage and orienteering; deployment, patrolling and foraging; search, tracking, and surveillance. The design and analysis of algorithms raise a unique combination of questions from many fields, including robotics, operational research, control theory, and computer science.

Crowdsourcing for Speech Processing Maxine Eskenazi,Gina-Anne Levow,Helen Meng,Gabriel Parent,David Suendermann,2013-02-15 Provides an insightful and practical introduction to crowdsourcing as a means of rapidly processing

speech data Intended for those who want to get started in the domain and learn how to set up a task, what interfaces are available, how to assess the work, etc. as well as for those who already have used crowdsourcing and want to create better tasks and obtain better assessments of the work of the crowd. It will include screenshots to show examples of good and poor interfaces; examples of case studies in speech processing tasks, going through the task creation process, reviewing options in the interface, in the choice of medium (MTurk or other) and explaining choices, etc. Provides an insightful and practical introduction to crowdsourcing as a means of rapidly processing speech data. Addresses important aspects of this new technique that should be mastered before attempting a crowdsourcing application. Offers speech researchers the hope that they can spend much less time dealing with the data gathering/annotation bottleneck, leaving them to focus on the scientific issues. Readers will directly benefit from the book's successful examples of how crowd- sourcing was implemented for speech processing, discussions of interface and processing choices that worked and choices that didn't, and guidelines on how to play and record speech over the internet, how to design tasks, and how to assess workers. Essential reading for researchers and practitioners in speech research groups involved in speech processing

Macrotask Crowdsourcing Vassillis-Javed Khan,Konstantinos Papangelis,Ioanna Lykourentzou,Panos Markopoulos,2019-08-06 Crowdsourcing is an emerging paradigm that promises to transform several domains: creative work, business work, cultural cooperation, etc. Crowdsourcing reflects the close-knit interplay between the latest computer technologies, the rapidly changing work model of the 21st century, and the very nature of people. The interplay makes for an exciting but at the same time challenging new field to investigate under the lens of a diverse set of disciplines, ranging from the technical to the social and from the theoretical to the applied. Early research has focused on an aspect

of crowdsourcing known as micro-tasking. Micro-tasks are simple tasks (like image annotations) that anyone could perform. An emerging area is how to utilize crowdsourcing to solve problems that go beyond simple tasks towards more complex ones, that require collaboration and creativity. In juxtaposition to micro-task crowdsourcing, this book investigates macro-task crowdsourcing and its potential.

African Regional Trade Agreements as Legal Regimes James Thuo Gathii,2011-07-21 African regional trade integration has grown exponentially in the last decade. This book is the first comprehensive analysis of the legal framework within which it is being pursued. It will fill a huge knowledge gap and serve as an invaluable teaching and research tool for policy makers in the public and private sectors, teachers, researchers and students of African trade and beyond. The author argues that African Regional Trade Agreements (RTAs) are best understood as flexible legal regimes particularly given their commitment to variable geometry and multiple memberships. He analyzes the progress made toward trade liberalization in each region, how the RTAs are financed, their trade remedy and judicial regimes, and how well they measure up to Article XXIV of GATT. The book also covers monetary unions as well as intra-African regional integration, and examines free trade agreements with non-African regions including the Economic Partnership Agreements with the European Union.
