Will the Boat Sink the Water? Chen Guidi, Wu Chuntao, 2007-04-24 The Chinese economic miracle is happening despite, not because of, China's 900 million peasants. They are missing from the portraits of booming Shanghai, or Beijing. Many of China's underclass live under a feudalistic system unchanged since the fifteenth century. They are truly the voiceless in modern China. They are also, perhaps, the reason that China will not be able to make the great social and economic leap forward, because if it is to leap it must carry the 900 million with it. Chinese journalists Wu Chuntao and Chen Guidi returned to Wu's home province of Anhui, one of China's poorest, to undertake a three-year survey of what had happened to the peasants there, asking the question: Have the peasants been betrayed by the revolution undertaken in their name by Mao and his successors? The result is a brilliant narrative of life among the 900 million, and a vivid portrait of the petty dictators that run China's villages and counties and the consequences of their bullying despotism on the people they administer. Told principally through four dramatic narratives of particular Anhui people, *Will the Boat Sink the Water?* gives voice to the unheard masses and looks beneath the gloss of the new China to find the truth of daily life for its vast population of rural poor.

Advances in Intelligent Computing De-Shuang Huang, Xiao-Ping Zhang, Guang-Bin Huang, 2005-09-16 The International Conference on Intelligent Computing (ICIC) was set up as an annual forum dedicated to emerging and challenging topics in the various aspects of advances in computational intelligence fields, such as artificial intelligence, machine learning, bioinformatics, and computational biology, etc. The goal of this conference was to bring together researchers from academia and industry as well as practitioners to share ideas, problems and solutions related to the multifaceted aspects of intelligent computing. This book constitutes the proceedings of the International Conference on Intelligent Computing (ICIC 2005), held in Hefei, Anhui, China, during August 23–26, 2005. ICIC 2005 received over 2000 submissions from authors in 39 countries and regions. Based on rigorous peer reviews, the Program Committee selected 563 high-quality papers for presentation at ICIC 2005; of these, 215 papers were published in this book organized into 9 categories, and the other 348 papers were published in five international journals. The organizers of ICIC 2005 made great efforts to ensure the success of this conference. We here thank the members of the ICIC 2005 Advisory Committee for their guidance and advice, the members of the Program Committee and the referees for reviewing the papers, and the members of the Publication Committee for checking and compiling the papers. We would also like to thank the publisher, Springer, for their support in publishing the proceedings in the Lecture Notes in Computer Science series. In Search of the Dharma Chen-hua, 1992-08-25 This is the first and only book in English on modern Chinese Buddhism written by a practicing Chinese monk. Chen-hua provides a rare eyewitness account of Chinese monastic life and Buddhist practices before they were changed forever by the Communist revolution. It begins with his departure from home in northern China to study Buddhism in Kiansu and Chekiang in the south and ends with his rejoining the monastic order in Taiwan after spending several years as a draftee in the Nationalist army. Following century-old traditions of Ch'an monks, Chen-hua made pilgrimages to all the major monasteries and holy sites, and sought instruction from many famous masters. His ordination at Pao-hua; Buddha recitation weeks at Ling-yen; scriptural studies at T'ien-ning; and a pilgrimage to P'u-t'o, the sacred island of Kuan-yin, are some of the highlights of this candid and perceptive book. The Introduction by Chun-fang Yu places the work in a historical perspective. Notes, a glossary of Chinese terms, maps, and photos help readers who are new to the field.

To Realize Enlightenment Huai-chin Nan, Huaijin Nan, 1994 *To Realize Enlightenment* has been written for contemporary students who want further understanding of the details and practices behind the various schools of self realization. In Master Nan's earlier book, *Working Toward Enlightenment*, he established the framework and references for understanding the path. In this new book, Master Nan discusses how to generate, enter and leave samadhi, and presents details of different types of samadhi and other experiential realms one can encounter in cultivation. Through the introduction of previously untranslated poems and texts, he throws new light on the Zen School and Chinese history. Master Nan describes his own experience on the path, and explains that to sit in meditation is not enough. We must transform mental activity and daily behavior, bringing the practice of compassion to all our world activities.

Resistive Switching: Oxide Materials, Mechanisms, Devices and Operations Jennifer Rupp, Daniele Ielmini, Ilia Valov, 2021-10-15 This book provides a broad examination of redox-based resistive switching memories (ReRAM), a promising technology for novel types of nanoelectronic devices, according to the International Technology Roadmap for Semiconductors, and the materials and physical processes used in these ionic transport-based switching devices. It covers defect kinetic models for switching, ReRAM deposition/fabrication methods, tuning thin film microstructures, and material/device characterization and modeling. A slate of world-renowned authors address the influence of type of ionic carriers, their mobility, the role of the local and chemical composition and environment, and facilitate readers' understanding of the effects of composition and structure at different length scales (e.g., crystalline vs amorphous phases, impact of extended defects such as dislocations and grain boundaries). ReRAMs show outstanding potential for scaling down to the atomic level, fast operation in the nanosecond range, low power consumption, and non-volatile storage. The book is ideal for materials scientists and engineers concerned with novel types of nanoelectronic devices such as memories, memristors, and switches for logic and neuromorphic computing circuits beyond the von Neumann concept.
