Historical Dictionary of Chinese Theater Tan Ye, 2020-03-15 There is a sense of timelessness in the Chinese theater: ever since its maturation, its format has not changed in any significant way. Chinese Theater matured into its final format in the 13th century and flourished during the Yuan, Ming, and Qing Dynasties. It is a unique, exclusive, and self-sufficient system, whose evolution has received little influence from the West and whose influence on Western theaters has been minimal and often misinterpreted. It is essentially a performer's theater; the actors attract the audience with splendid performances perfected through many years of rigorous training. This second edition of Historical Dictionary of Chinese Theater contains a chronology, an introduction, and an extensive bibliography. The dictionary section has over 1,500 cross-referenced entries on performers, directors, producers, designers, actors, theaters, dynasties, and emperors. This book is an excellent resource for students, researchers, and anyone wanting to know more about Chinese theater.

Building Engines for Growth and Competitiveness in China Douglas Zhihua Zeng,2010-08-25 In the past 30 years, China has achieved an unprecedented development 'miracle' in human history. How did China achieve this? What are the key drivers for such a rapid growth? And most importantly, what can be learned from China's success? While many factors could be identified to explain China's success, it is no doubt that the numerous Special Economic Zones (SEZs) and industrial clusters that emerged after the country's reforms are two important engines that have been driving China's rapid development. The key experiences of China's SEZs and industrial clusters could be best summarized as: gradualism with experimental approach; strong commitment; and an active facilitating state with strong pragmatism. This book reviews the development experiences of China's SEZs and industrial clusters through extensive research, field visits, and case studies in an attempt to benefit the policy-makers, development practitioners, scholars from developing countries, and the global development community in general. It contains five detailed case studies three SEZs in the broadest sense (Shenzhen, Tianjin and Kunshan) and two industrial clusters (Wenzhou footwear cluster in Zhejiang and Xiqiao textile cluster in Guangdong). This volume represents the most comprehensive volume to date on China's experiences with both its SEZ and cluster experiences.

2034 Elliot Ackerman,Admiral James Stavridis, USN,2021-03-09 An instant New York Times Bestseller! "Consider this another vaccine against disaster. Fortunately, this dose won't cause a temporary fever—and it happens to be a rippingly good read." —Wired "This crisply written and well-paced book reads like an all-caps warning for a world shackled to the machines we carry in our pockets and place on our laps . . . —The Washington Post From two former military officers and award-winning authors, a chillingly authentic geopolitical thriller that imagines a naval clash between the US and China in the South China Sea in 2034—and the path from there to a nightmarish global conflagration. On March 12, 2034, US Navy Commodore

Sarah Hunt is on the bridge of her flagship, the guided missile destroyer USS John Paul Jones, conducting a routine freedom of navigation patrol in the South China Sea when her ship detects an unflagged trawler in clear distress, smoke billowing from its bridge. On that same day, US Marine aviator Major Chris Wedge Mitchell is flying an F35E Lightning over the Strait of Hormuz, testing a new stealth technology as he flirts with Iranian airspace. By the end of that day, Wedge will be an Iranian prisoner, and Sarah Hunt's destroyer will lie at the bottom of the sea, sunk by the Chinese Navy. Iran and China have clearly coordinated their moves, which involve the use of powerful new forms of cyber weaponry that render US ships and planes defenseless. In a single day, America's faith in its military's strategic pre-eminence is in tatters. A new, terrifying era is at hand. So begins a disturbingly plausible work of speculative fiction, co-authored by an award-winning novelist and decorated Marine veteran and the former commander of NATO, a legendary admiral who has spent much of his career strategically outmaneuvering America's most tenacious adversaries. Written with a powerful blend of geopolitical sophistication and human empathy, 2034 takes us inside the minds of a global cast of characters--Americans, Chinese, Iranians, Russians, Indians--as a series of arrogant miscalculations on all sides leads the world into an intensifying international storm. In the end, China and the United States will have paid a staggering cost, one that forever alters the global balance of power. Everything in 2034 is an imaginative extrapolation from present-day facts on the ground combined with the authors' years working at the highest and most classified levels of national security. Sometimes it takes a brilliant work of fiction to illuminate the most dire of warnings: 2034 is all too close at hand, and this cautionary tale presents the reader a dark yet possible future that we must do all we can to avoid.

Implications of Ferroptosis-related Genes to the Genetics of Cancer Development Lian Xiang Luo, Lei Huang, Ying Li,

Genetics and Epigenetics of Psychiatric Diseases, 2nd Edition Cunyou Zhao, Weihua Yue, Zhexing Wen, 2020-10-09 Psychiatric diseases have a highly complex etiology, aggregating in families but not segregating in a traditional Mendelian manner. Recent approaches to understanding the causes of psychiatric disease have focused on describing the genetic contribution to major psychiatric illnesses; the use of large-scale genome-wide association studies (GWAS) and exome sequencing has enabled a systematic exploration of genetic risk factors and identified over 100 independent genomic loci significantly associated with psychiatric diseases; however, there remains uncertainty about the causal genes involved in disease pathogenesis, and how their function is regulated. Since many GWAS variants reside in non-coding regions, the disease-associated common variants might be enriched in regulatory domains, including enhancers and regions of active chromatin state. These lead us to focus on the possible role of non-sequence-based genomic variation in health and disease. Of particular interest are epigenetic modifications that regulate gene expression through modifications to DNA, RNA, histone proteins, and chromatin. The availability of high-throughput profiling methods for quantifying epigenomic modifications in large numbers of samples has enabled us to perform epigenome-wide association studies (EWAS) aimed at screening methylomic variations associated with environmental exposure and disease. Thus systematic integration of genetic, epigenetic and epidemiological approaches will contribute to improving our understanding of the molecular mechanisms underlying disease phenotypes.
