Gender Trouble Judith Butler,2011-09-22 Since its initial publication in 1990, this book has become a key work of contemporary feminist theory, and an essential work for anyone interested in the study of gender, queer theory, or the politics of sexuality in culture. This is the text where the author began to advance the ideas that would go on to take life as performativity theory, as well as some of the first articulations of the possibility for subversive gender practices. Overall, this book offers a powerful critique of heteronormativity and of the function of gender in the modern world.

The Law of the Near and Middle East Herbert J.

Liebesny,1975-01-01 A systematic survey of fundamental statements of Islamic and Near Eastern law that includes selections from the writings of classic Islamic scholars, contemporary works on legal theory, and modern Middle Eastern codes. No other accessible work brings together so many useful materials on the development of Islamic law, as does this volume based on translations from a variety of languages and numerous sources, all of which are identified. Because of the important role which law plays in Islamic culture, some acquaintance with legal developments is indispensable if one is to gain a rounded picture of Islamic culture.

The Collapse of the Fact/Value Dichotomy and Other Essays Hilary Putnam,2004-03-30 If philosophy has any business in the world, it is the clarification of our thinking and the clearing away of ideas that cloud the mind. In this book, one of the world's

preeminent philosophers takes issue with an idea that has found an all-too-prominent place in popular culture and philosophical thought: the idea that while factual claims can be rationally established or refuted, claims about value are wholly subjective, not capable of being rationally argued for or against. Although it is on occasion important and useful to distinguish between factual claims and value judgments, the distinction becomes, Hilary Putnam argues, positively harmful when identified with a dichotomy between the objective and the purely subjective. Putnam explores the arguments that led so much of the analytic philosophy of language, metaphysics, and epistemology to become openly hostile to the idea that talk of value and human flourishing can be right or wrong, rational or irrational; and by which, following philosophy, social sciences such as economics have fallen victim to the bankrupt metaphysics of Logical Positivism. Tracing the problem back to Hume's conception of a matter of fact as well as to Kant's distinction between analytic and synthetic judgments, Putnam identifies a path forward in the work of Amartya Sen. Lively, concise, and wise, his book prepares the way for a renewed mutual fruition of philosophy and the social sciences.

A Research Agenda For DSM V David J. Kupfer,Michael B. First,Darrel A. Regier,2008-08-13 In the ongoing quest to improve our psychiatric diagnostic system, we are now searching for new approaches to understanding the etiological and pathophysiological mechanisms that can improve the validity of our diagnoses and the consequent power of our preventive and treatment interventions -- venturing beyond the current DSM paradigm and DSM-IV framework. This thought-provoking volume - - produced as a partnership between the American Psychiatric Association, the National Institute of Mental Health, the National

Institute on Alcohol Abuse and Alcoholism, and the National Institute on Drug Abuse -- represents a far-reaching attempt to stimulate research and discussion in the field in preparation for the eventual start of the DSM-V process, still several years hence. The book Explores a variety of basic nomenclature issues, including the desirability of rating the quality and quantity of information available to support the different disorders in the DSM in order to indicate the disparity of empirical support across the diagnostic system. Offers a neuroscience research agenda to guide development of a pathophysiologically based classification for DSM-V, which reviews genetic, brain imaging, postmortem, and animal model research and includes strategic insights for a new research agenda. Presents highlights of recent progress in developmental neuroscience, genetics, psychology, psychopathology, and epidemiology, using a bioecological perspective to focus on the first two decades of life, when rapid changes in behavior, emotion and cognition occur. Discusses how to address two important gaps in the current DSM-IV: (1) the categorical method of diagnosing personality disorders and their relationship with Axis I disorders, and (2) the limited provision for the diagnosis of relational disorders -- suggesting a research agenda for personality disorders that considers replacing the current categorical approach with a dimensional classification of personality. Reevaluates the relationship between mental disorders and disability, asserting that research into disability and impairment would benefit from the diagnosis of mental disorders be uncoupled from a requirement for impairment or disability to foster a more vigorous research agenda on the etiologies, courses, and treatment of mental disorders as well as disabilities and to avert unintended consequences of delayed diagnosis and treatment. Examines the importance of culture in psychopathology and the main cultural variables at play in the diagnostic process, stating that training present and future professionals in the need to include cultural factors in the diagnostic process is a logical step

in any attempt to develop comprehensive research programs in psychology, psychiatry, and related disciplines. This fascinating work, with contributions from an international group of research investigators, reaches into the core of psychiatry, providing invaluable background and insights for all psychology and psychiatry professionals -- food for thought and further research that will be relevant for years to come.

Perspectives on Minority Influence Serge Moscovici, Gabriel Mugny, Eddy van Avermaet, 1985-06-27 The contributors to this volume examine social processes in terms of minority influence.

Between Sodom and Eden Lee Walzer, 2000-03-30
Astonishingly, Israeli lesbians and gays have been able to achieve many political goals that still elude America's gay community. Israel's Supreme Court has mandated same-sex spousal benefits; the military, which never barred gays to begin with, has removed its last official restrictions; Israel's parliament boasts a Subcommittee for the Prevention of Sexual Orientation Discrimination; and school curricula are gay-friendly—all of this in a country where religious interests wield extraordinary power and whose identity today is the object of fierce struggle. *Between Sodom and Eden*, the first book to explore this rapidly changing landscape, is based on interviews with over one hundred Israelis, as well as Palestinians. Lee Walzer explores how, within a decade, Israel has evolved from a society that marginalized homosexuals to one that offers some of the most extensive legal protections in the world. He traces the political, religious, and social factors that make Israel a gay rights trendsetter, examining the interplay between Judaism and homosexuality, the growing prominence of gay themes in Israeli literature, film, music, and television, and the role of the media in advancing lesbian and gay political progress.

UNESCO science report UNESCO,2015-11-09 There are fewer grounds today than in the past to deplore a North-South divide in research and innovation. This is one of the key findings of the UNESCO Science Report: towards 2030. A large number of countries are now incorporating science, technology and innovation in their national development agenda, in order to make their economies less reliant on raw materials and more rooted in knowledge. Most research and development (R&D) is taking place in high-income countries, but innovation of some kind is now occurring across the full spectrum of income levels according to the first survey of manufacturing companies in 65 countries conducted by the UNESCO Institute for Statistics and summarized in this report. For many lower-income countries, sustainable development has become an integral part of their national development plans for the next 10–20 years. Among higher-income countries, a firm commitment to sustainable development is often coupled with the desire to maintain competitiveness in global markets that are increasingly leaning towards ‘green’ technologies. The quest for clean energy and greater energy efficiency now figures among the research priorities of numerous countries. Written by more than 50 experts who are each covering the country or region from which they hail, the UNESCO Science Report: towards 2030 provides more country-level information

than ever before. The trends and developments in science, technology and innovation policy and governance between 2009 and mid-2015 described here provide essential baseline information on the concerns and priorities of countries that could orient the implementation and drive the assessment of the 2030 Agenda for Sustainable Development in the years to come.

Encyclopedia of Geomorphology Andrew

Goudie, 2013-04-15 Geomorphology, the discipline which analyzes the history and nature of the earth's surface, deals with the landforms produced by erosion, weathering, deposition, transport and tectonic processes. In recent decades there have been major developments in the discipline and these are reflected in this major Encyclopedia, the first such reference work in the field to be published for thirty-five years. Encyclopedia of Geomorphology has been produced in association with the International Association of Geomorphologists (IAG) and has a truly global perspective. The entries have been written by an international editorial team of contributors, drawn from over thirty countries, who are all among the leading experts in the discipline. In two lavishly illustrated volumes, Encyclopedia contains nearly 700 alphabetically organized entries to provide a comprehensive guide both to specific landforms and to the major types of geomorphological processes that create them. The Encyclopedia also demonstrates the major developments that have taken place in recent years in our knowledge of tectonic and climatic changes and in the use of new techniques such as modelling, remote sensing and process measurement. Older concepts, however, are not forgotten and provide an historical perspective on the development of ideas. Both accessible and authoritative, Encyclopedia of Geomorphology

is destined to become the definitive resource for students, researchers and applied practitioners in the field of geomorphology and the cognate disciplines of geography, earth science, sedimentology and environmental science.
