VISUAL BASIC .NET AND DATABASE: PRACTICAL TUTORIALS Vivian Siahaan, Rismon Hasiholan Sianipar, 2020-10-31 This book aims to develop a MySQL-driven desktop application that readers can develop for their own purposes to implement library project using Visual Basic .NET. In Tutorial 1, you will build a Visual Basic interface for the database. This interface will be used as the main terminal in accessing other forms. This tutorial will also discuss how to create login form and login table. You will create login form. Place on the form one picture box, two labels, one combo box, one text box, and two buttons. In Tutorial 2, you will build a school inventory project where you can store information about valuables in school. The table will have nine fields: Item (description of the item), Quantity, Location (where the item was placed), Shop (where the item was purchased), DatePurchased (when the item was purchased), Cost (how much the item cost), SerialNumber (serial number of the item), PhotoFile (path of the photo file of the item), and Fragile (indicates whether a particular item is fragile or not). In Tutorial 3, you will perform the steps necessary to add 5 new tables using phpMyAdmin into Academy database. You will build each table and add the associated fields as needed. Every table in the database will need input form. In this tutorial, you will build such a form for Author table. Although this table is quite simple (only four fields: AuthorID, Name, BirthDate, and PhotoFile), it provides a basis for illustrating the many steps in interface design. SQL statement is required by the Command object to read fields (sorted by Name). Then, you will build an interface so that the user can maintain the Publisher table in the database (Academy). The Publisher table interface is more or less the same as Author table interface. This Publisher table interface only requires more input fields. So you will use the interface for the Author table and modify it for the Publisher table. In Tutorial 4, you will perform the steps necessary to design and implement title form, library member form, and book borrowal form. You start by designing and testing the basic entry form for book titles. The Title table has nine fields: BookTitle, PublishYear, ISBN, PublisherID, AuthorID, Description, Note, Subject, and Comment. Then, you will build such a form for Member table. This table has twelve fields: MemberID, FirstName, LastName, BirthDate, Status, Ethnicity, Nationality, Mobile, Phone, Religion, Gender, and PhotoFile). You need thirteen label controls, one picture box, six text boxes, four comboboxes, one check box, one date time picker, one openFileDialog, and one printpreviewdialog. You also need four buttons for navigation, six buttons for controlling editing features, one button for searching member's name, and one button to upload member's photo. Finally, you will build such a form for Borrow table. This table has seven fields: BorrowID, MemberID, BorrowCode, ISBN, BorrowDate, ReturnDate, and Penalty. In this form, you need fourteen label controls, seven text boxes, two comboboxes, two date

time pickers, and one printpreviewdialog. You also need four buttons for navigation, seven buttons for other utilities, one button to generate borrowal code, and one button to return book.

Building Data-Centric .Net Applications with Programming Entity Framework Moubachir Madani Fadoul,2020-06-03 ADO.NET in a Nutshell delivers everything .NET programmers will need to get a jump-start on ADO.NET technology or to sharpen their skills even further. ADO.NET is the suite of data access technologies in the .NET Framework that developers use to build applications services accessing relational data and XML. Connecting to databases is a fundamental part of most applications, whether they are web, Windows(R), distributed, client/server, XML Web Services, or something entirely different. But ADO.NET is substantially different from Microsoft's previous data access technologies--including the previous version of ADO--so even experienced developers need to understand the basics of the new disconnected model before they start programming with it.Current with the .NET Framework, ADO.NET in a Nutshell offers one place to look when you need help with anything related to this essential technology, including a reference to the ADO.NET namespaces and object model. In addition to being a valuable reference, this book provides a concise foundation for programming with ADO.NET and covers a variety of issues that programmers face when developing web applications or Web Services that rely on database access. Using C#, this book presents real world, practical examples that will help you put ADO.NET to work immediately.Topics covered in the book include: -An Introduction to ADO.NET-Connections, Commands and DataReaders-Disconnected Data-Datatables-DataViews and Data Binding-XML and the DataSet-SQL server connectivity -Web form examples-MVC examples etc . This tutorial guide has been prepared for beginners and professionals to help them in understanding the basic concepts related ADO.NET Framework. The book tutorial gives you enough understanding on ADO.NET Framework from where you can take yourself to a higher level of expertise.

VISUAL BASIC .NET FOR STUDENTS Vivian Siahaan,Rismon Hasiholan Sianipar,2020-08-03 In chapter one, you will get to know the properties and events of each control in a Windows Visual Basic application. You need to learn and know in order to be more familiar when applying them to some desktop applications in this book. In Tutorial 1.1, you will build a dual-mode stopwatch. The stopwatch can be started and stopped whenever desired. Two time traces: the running time when the stopwatch is active (running time) and the total time since the first stopwatch was activated. Two label controls are used to display the time (two more labels to display title information). Two button controls are used to start/stop and reset the application, one more button to exit the application. The timer control is used to periodically (every second) update the displayed time. In Tutorial 1.2, you will build a project so that children can practice basic skills in addition, subtraction, multiplication, and division operations. This Math Game project can be used to choose the types of questions and what factor you want to use. This project has three timing options. In Tutorial 1.3, you will build Bank Code game. The storage box is locked and can only be opened if you enter the correct digit combination. Combinations can be 2 to 4 non-repetitive digits (range of digits from 1 to 9). After a guess is given, you will be notified of how many digits are right and how many digits are in the right position. Based on this information, you will give another guess. You continue to guess until you get the right combination or until you stop the game. In Tutorial 1.4, you will

build Horse Racing game. This is a simple game. Up to 10 horses will race to the finish line. You guessed two horses that you thought could win the race. By clicking on the Start button, the race will start. All horses will race speed to get to the finish line. In chapter two, you will learn the basic concepts of classes and objects. Next, it will demonstrate how to define class and type of enumeration, which shows how both are used in the application. In Tutorial 2.1, you will create a two-level application that uses a form to pass input user to the People class. The form class is the level of representation and the People class is the middle level. You will add controls to the form so people can enter ID, last name, and their height. When the user clicks the Save button, the code will assign input values to the People class properties. Finally, you will display the People object on a label. Figure below shows the form after the user clicks the Save button. In Tutorial 2.2, you will add a parameterized constructor to the People class. The application will ask the user to enter values, which will then be passed to the People constructor. Then, the application will display the values stored on the People object. In Tutorial 2.3, you will create an application that utilizes enumeration type. The user will choose one type of account that is listed in a ListBox control and what he chooses is then displayed in a Label control. In Tutorial 2.4, you will create a simple Bank application. This application has one class, BankAcc, and a startup form. In Tutorial 2.5, you will improve the simple Bank application, by implementing the following two properties in the BankAcc class: TotalDeposit- Total money saved in current account; TotalWithdraw- Total funds that have been withdrawn from current account. In Tutorial 2.6, you will create an application to calculate the time needed for a particular aircraft to reach takeoff speed. You will also calculate how long the runway will be required. For each type of aircraft, you are given (1) the name of the aircraft, (2) the required take-off speed (feet/sec), and (3) how fast the plane accelerates (feet/sec²). In Tutorial 2.7, you will provide a number of programming training for those who want to improve their programming skills. Your task here is to write an object-oriented application so that training manager can display and edit the training services offered. There are several training categories: (1) Application Development, (2) Database, (3) Networking, and (4) System Administration. The training itself consists of: (1) title, (2) training days, (3) category, and (4) cost. Create a class named Training that contains this information, along with its properties and a ToString() method. In chapter three, several tutorials will be presented to build more complex projects. You will build them gradually and step by step. In Tutorial 3.1, you will build Catching Ball game. The bird flew and dropped ball from the sky. User is challenged to position man under the fallen ball to catch it. In Tutorial 3.2, you will build Smart Tic Tac Toe game. The aim of this game is to win the game on a 3 x 3 grid with the victory of three identical symbols (X or O) on horizontal, diagonal, or vertical lines. The players will play alternately. In this game given two game options: player 1 against player 2 or human player against computer. A smart but simple strategy will be developed for computer logic to be a formidable opponent for human. In Tutorial 3.3, you will build a Matching Images game. Ten pairs of images hidden on the game board. The object of the game is to find image pairs. In Two Players mode, players will get turns in turn. In One Player mode, there are two options to choose from: Playing Alone or Against Computer. When Play Alone option is selected, the player will play alone without an opponent. If Against Computer option is selected, then the level of computer intelligence is given with several levels according to the level of difficulty of the game. In Tutorial 3.4, you will build Throwing Fire program. This program can be played by two human players or human player versus computer. In chapter four, tutorials will be presented to build two advanced projects. You will build them gradually and step by step. In Tutorial 4.1, you will build Roasted Duck Delivery simulation. In this simulation, a number of decisions are needed. The basic idea is to read the order by incoming telephone and tell the delivery scooter to go to the location of the order. You also need to make sure that you always provide a roasted duck ready to be transported by the delivery scooter. The delivery area is a 20 by 20 square grid. The more roasted duck is sold, the more profit it gets. In Tutorial 4.2, you will build a Drone Simulation. In this simulation, you control both vertical and horizontal thrusters to maneuver the ride to the landing pad. You will adjust the landing speed so that it is slow enough so that no accident occurs.
