The Science of the Fastball William Blewett, 2013-02-18 This book presents a scientific but easy to understand explanation of pitching power. Illustrated with anecdotes about baseball's greatest power pitchers, it describes how they were able to achieve phenomenal fastball velocity and record-breaking strikeout numbers. How was a 17-year-old rookie named Bob Feller able to strike out Major League batters in record numbers? How do the tendons, ligaments, and muscles of the arm and shoulder work to amplify power for greater pitch velocity? How was minor league pitcher Steve Dalkowski able to throw the most phenomenal fastball ever seen (or heard)? Why do young pitchers with exceptional velocity often issue walks at exceptional rates? Why do good pitchers occasionally pitch badly? Why is exceptional hand speed important? What is it about overhand throwing that causes elbow and shoulder injuries? How can a pitcher achieve greater endurance and durability? What is the most reliable way to increase fastball velocity? This book addresses these and other questions for pitchers, coaches, managers, trainers, and

fans.

ECAI 2014 T. Schaub, G. Friedrich, B. O'Sullivan, 2014-08 The role of artificial intelligence (AI) applications in fields as diverse as medicine, economics, linguistics, logical analysis and industry continues to grow in scope and importance. AI has become integral to the effective functioning of much of the technical infrastructure we all now take for granted as part of our daily lives. This book presents the papers from the 21st biennial European Conference on Artificial Intelligence, ECAI 2014, held in Prague, Czech Republic, in August 2014. The ECAI conference remains Europe's principal opportunity for researchers and practitioners of Artificial Intelligence to gather and to discuss the latest trends and challenges in all subfields of AI, as well as to demonstrate innovative applications and uses of advanced AI technology. Included here are the 158 long papers and 94 short papers selected for presentation at the conference. Many of the papers cover the fields of knowledge representation, reasoning and logic as well as agent-based and multi-agent systems, machine learning, and data mining. The proceedings of PAIS 2014 and the PAIS System Demonstrations are also included in this volume, which will be of interest to all those wishing to keep abreast of the latest developments in the field of AI.

Statistical Inference as Severe Testing Deborah G. Mayo, 2018-09-30 Mounting failures of replication in social and biological sciences give a new urgency to critically appraising proposed reforms. This book pulls back the cover on disagreements between experts charged with restoring integrity to science. It denies two pervasive views of the role of probability in inference: to assign degrees of belief, and to control error rates in a long run. If statistical consumers are unaware of assumptions behind rival evidence reforms, they can't scrutinize the consequences that affect them (in personalized medicine, psychology, etc.). The book sets sail with a simple tool: if little has been done to rule out flaws in inferring a claim, then it has not passed a severe test. Many methods advocated by data experts do not stand up to severe scrutiny and are in tension with successful strategies for blocking or accounting for cherry picking and selective reporting. Through a series of excursions and exhibits, the philosophy and history of inductive inference come alive. Philosophical tools are put to work to solve problems about science and pseudoscience, induction and falsification.

XX Olympiad George Daniels, 2015-11-18 The Summer Olympics of Munich 1972 were called *The Cheerful Games*, but that was before the spectre of terrorism marked them forever in the history of sport. *XX Olympiad*, the eighteenth volume in *The Olympic Century* series, recalls the tragic events in

Munich, along with the many moments of triumph. The book recounts the 18-hour standoff between police and eight Palestinian terrorists who took 11 Israeli athletes and coaches hostage in the Olympic Village. All the hostages and three terrorists would die during the ordeal. The Games resumed after 24 hours, and the heroes of Munich emerged: American swimmer Mark Spitz, who would claim a then-record seven gold medals; Soviet gymnast Olga Korbut, who charmed the world in winning three golds; and a 15-year-old Australian named Shane Gould, who challenged Spitz in the pool with three gold-medal performances. The book also recounts the curious story of marathon winner Frank Shorter entering the stadium running behind an imposter who had joined the race in the final stages. The book then turns its focus to the 1976 Winter Games of Innsbruck, Austria. The book profiles athletes like Austrian favourite Franz Klammer, who won the downhill with a heart-stopping final run; US figure skater Dorothy Hamill, who won gold and sparked a worldwide trend in hairstyles; and West German skier Rosi Mittermaier, who missed out on winning three golds by just 0.13 seconds. Juan Antonio Samaranch, former President of the International Olympic Committee, called *The Olympic Century*, the most comprehensive history of the Olympic games ever published.

Artificial Life VII Mark A. Bedau, John S. McCaskill, Norman H. Packard, Steen Rasmussen, 2000-08-01 The term artificial life describes research into synthetic systems that possess some of the essential properties of life. This

interdisciplinary field includes biologists, computer scientists, physicists, chemists, geneticists, and others. Artificial life may be viewed as an attempt to understand high-level behavior from low-level rules—for example, how the simple interactions between ants and their environment lead to complex trail-following behavior. An understanding of such relationships in particular systems can suggest novel solutions to complex real-world problems such as disease prevention, stock-market prediction, and data mining on the Internet. Since their inception in 1987, the Artificial Life meetings have grown from small workshops to truly international conferences, reflecting the field's increasing appeal to researchers in all areas of science.
