Another main topic is dedicated to minorities and their role and situation in various provinces and cities of the Ottoman Empire, as represented by various sources. Digital Games and Mathematics Learning Tom Lowrie, Robyn Jorgensen (Zevenbergen), 2015-10-05 Digital games offer enormous potential for learning and engagement in mathematics ideas and

processes. This volume offers multidisciplinary perspectives—of educators, cognitive scientists, psychologists and sociologists—on how digital games influence the social activities and mathematical ideas of learners/gamers. Contributing authors identify opportunities for broadening current understandings of how mathematical ideas are fostered (and embedded) within digital game environments. In particular, the volume advocates for new and different ways of thinking about mathematics in our digital age—proposing that these mathematical ideas and numeracy practices are distinct from new literacies or multiliteracies. The authors acknowledge that the promise of digital games has not always been realised/fulfilled. There is emerging, and considerable, evidence to suggest that traditional discipline boundaries restrict opportunities for mathematical learning. Throughout the book, what constitutes mathematics learnings and pedagogy is contested. Multidisciplinary viewpoints are used to describe and understand the potential of digital games for learning mathematics and identify current tensions within the field. Mathematics learning is defined as being about problem solving; engagement in mathematical ideas and processes; and social engagement. The artefact, which is the game, shapes the ways in which the gamers engage with the social activity of gaming. In parallel, the book (as a textual artefact) will be supported by Springer's online platform—allowing for video and digital communication (including links to relevant websites) to be used as supplementary material and establish a dynamic communication space.

Advances in Digital Forensics XII Gilbert Peterson, Sujeet Sheno, 2016-09-19 Digital forensics deals with the acquisition, preservation, examination, analysis and presentation of electronic evidence. Networked computing, wireless communications and portable

electronic devices have expanded the role of digital forensics beyond traditional computer crime investigations. Practically every crime now involves some aspect of digital evidence; digital forensics provides the techniques and tools to articulate this evidence. Digital forensics also has myriad intelligence applications. Furthermore, it has a vital role in information assurance -- investigations of security breaches yield valuable information that can be used to design more secure systems. Advances in Digital Forensics XII describes original research results and innovative applications in the discipline of digital forensics. In addition, it highlights some of the major technical and legal issues related to digital evidence and electronic crime investigations. The areas of coverage include: Themes and Issues, Mobile Device Forensics, Network Forensics, Cloud Forensics, Social Media Forensics, Image Forensics, Forensic Techniques, and Forensic Tools. This book is the twelfth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.9 on Digital Forensics, an international community of scientists, engineers and practitioners dedicated to advancing the state of the art of research and practice in digital forensics. The book contains a selection of twenty edited papers from the Twelfth Annual IFIP WG 11.9 International Conference on Digital Forensics, held in New Delhi, India in the winter of 2016. Advances in Digital Forensics XII is an important resource for researchers, faculty members and graduate students, as well as for practitioners and individuals engaged in research and development efforts for the law enforcement and intelligence communities. Gilbert Peterson, Chair, IFIP WG 11.9 on Digital Forensics, is a Professor of Computer Engineering at the Air Force Institute of Technology, Wright-Patterson Air

Force Base, Ohio, USA. Sujeet Shenoi is the F.P. Walter Professor of Computer Science and a Professor of Chemical Engineering at the University of Tulsa, Tulsa, Oklahoma, USA.

Discovering Modern C++ Peter Gottschling, 2015-12-23 As scientific and engineering projects grow larger and more complex, it is increasingly likely that those projects will be written in C++. With embedded hardware growing more powerful, much of its software is moving to C++, too. Mastering C++ gives you strong skills for programming at nearly every level, from “close to the hardware” to the highest-level abstractions. In short, C++ is a language that scientific and technical practitioners need to know. Peter Gottschling’s *Discovering Modern C++* is an intensive introduction that guides you smoothly to sophisticated approaches based on advanced features. Gottschling introduces key concepts using examples from many technical

Engaging Chinese Students in Teaching and Learning at Western Higher Education Institutions Karen Burrows, 2016-09-23 There has been an increase over the past decade in the number of Chinese students studying in western Higher Education Institutions, with figures expected to increase over the next 10 years. However, this has

proved particularly challenging for the lecturers in these Institutions regarding how best to engage and teach this particularly unique student group. The Chinese student presents these challenges due to the many cultural and language differences that can be identified, as well as to the western teacher's perception of how these students like to be taught. This book disputes such myths, and provide a useful guide on what those challenges are, offering practical guidance on how to overcome them. The book firstly identifies and defines the Chinese student studying for a degree in western universities and institutions, before going on to examine and explore the cultural differences by discussing issues around teaching and learning. A chapter focusing specifically on language breaks down the differences in detail, with discussions around tonal language and its impact on the student's understanding. Further chapters discuss attitudes to learning, staff support for teaching this particular group, and, finally, some practical suggestions on how best to engage the student and enable them to achieve.

In addition to remembering those that passed away in those dark days of war, a sincere debt of gratitude is owed to all those now in their twilight years who gave all that they had for King

and Country. Here Gary Bridson-Daley presents forty-two of over a hundred interviews he conducted with veterans over recent years, adding to the history books the words and the original poetry of those that fought and supported the war effort to ensure freedom, peace and prosperity for generations to come. From each corner of the British Isles and every armed service, from Dam Buster George 'Johnny' Johnson through to riveter Susan Jones: heroes, all.

The Ship of Shadows H. Bedford-Jones, 2020-12-08
This is an adventure novel that revolves around Eric Venable. Excerpt: Were this to be the tale, simply, of how Eric Venable fell and rose again from the depths, much might be said of his voyage to Tientsin River. It would bear much dwelling upon; it would in itself make, from the Horatio-Algerian viewpoint, an excellent moral tale. But it would delete all about Shinski and Marie, and the Shirvan diamond, and the burlap, -wrapped parcel; it would have to touch upon, Mrs. Ivanoff's pistol with discretion; and of course, it could say little about the poet Gerin's company of sh, shadows, or the devil Boris Kryalpin, or the ending of the Kum Chao.
