Boo Stew Donna L. Washington, 2022-06-07 Award-winning storyteller Donna L. Washington has cooked up a delightfully spooky tale in this imaginative twist on the classic Goldilocks. Curly Locks is a good-hearted girl, but she's an awful cook. All the townspeople of Toadsuck Swamp know to steer clear of her peculiar dishes—like batwing brownies and toad eye toffees. So it's quite a mystery when one of her dishes goes missing from her windowsill. Next morning, chaos breaks out in town and word spreads how the Scares of Toadsuck Swamp are running wild and terrorizing the town at mealtime. They shriek Gitchey Boo, Gitchey Bon! Gitchey Goo, Gitchey Gone! and send folk running for their lives! But Curly Locks isn't frightened, and she has an inkling her unsavory cooking can help corral those Scares for good. Exercising tremendous narrative skill, internationally known storyteller Donna L. Washington breathes a spirited new life into an old classic. Her clever, can-do protagonist and joyful language pair brilliantly with Jeffrey Ebbeler's fantasy-like illustrations. This enchanting read is a treat for any time of the year!

HC 739 - Linking Emissions Trading Systems Great Britain. Parliament. House of Commons. Energy and Climate Change Committee, 2015-02-17 Carbon pricing is a necessary element in spurring climate change mitigation action. In this report it's argued that emissions trading, as an established and well recognised policy instrument for controlling greenhouse gas emissions, is increasingly popular and spreading around the world. As they develop, emissions trading systems should be designed so that they are compatible with each other. Aligning design elements early on will help improve the prospects of linking different systems in future and, therefore, maximise

opportunities for cost-effective emissions reductions. As the world's oldest and largest market, the EU Emission Trading System will play a critical role in facilitating linking between different markets. Before it can do this, however, it must be seen as a credible market. The issue of surplus allowances must be addressed urgently and there should be moves to remove these from the system as soon as possible. Any new climate agreement must crucially allow parties to meet their Intended Nationally Determined Contribution's (INDCs) by transferring parts of their contributions to other parties and financing emissions reduction activities in other countries. The use of carbon markets will greatly improve the prospects of keeping global average temperatures below 2°C. Any agreement reached at the UNFCCC COP 21 in Paris at the end of 2015 should promote the use of carbon markets and facilitate the future linking of emissions trading systems. The UNFCCC could also play a critical role in providing basic standards including monitoring, reporting and verification.
