Beyond Common Worship Mark Earey,2013-10-14 The introduction of Common Worship services in the Church of England has gone remarkably smoothly, considering the immensity of the task. But despite its overall success, the sheer variety of material, coupled with the complex rules about what is and is not allowed, have left some parishes, clergy and Readers wondering if this is really the best way to produce good worship. A question such as, How do we use Common Worship for a Messy Church service of Holy Communion? focuses the issue but it is a question being asked in different ways in lots of different places. In this book, Mark Earey turns to the future, asking whether the framework of canon law, notes and rubrics within which Common Worship operates is any longer fit for purpose. In a mixed economy Church in which fresh expressions of church, alt.worship and new monasticism all sit alongside traditional parish churches, he asks whether it is time for the current rules-based approach to Church of England liturgy to make way for an approach based on trust and accountability. Such an approach would allow for more local flexibility and creativity, but raises big questions about how such worship can be truly indigenous yet authentically Anglican.

Assistive Augmentation Jochen Huber,Roy Shilkrot,Pattie Maes,Suranga Nanayakkara,2017-11-09 This book addresses Assistive Augmentation, highlighting the design and development of assistive technologies, user interfaces, and interactions that seamlessly integrate with a user's mind, body, and behavior, providing an enhanced perception. Our senses are the dominant channel we use to perceive the world around us. Whether they have impairments or not, people often find themselves at the limits of their sensorial capabilities. Some seek assistive or enhancing devices that enable them to carry out specific tasks or even transform them into a "superhuman" with capabilities well beyond the ordinary. The overarching topic of this book revolves around the design and development of technologies and interfaces that provide enhanced physical, sensorial and cognitive capabilities: "Assistive Augmentation". The Assistive Augmentation community convened at an interdisciplinary workshop at the 2014 International Conference on Human Factors in Computing Systems (CHI) in Toronto, Canada. The community is comprised of researchers and practitioners who work at the junction of human–computer interaction, assistive technology and human augmentation. This edited volume, which represents the first tangible outcome of the workshop, presents stimulating discussions on the challenges of Assistive Augmentation as examined through case studies. These studies focus on two main areas: (1) Augmented Sensors and Feedback Modalities, and (2) Design for Assistive Augmentation.

Literacy in 3D Bill Green,Catherine Beavis,2012 Literacy in 3D brings together an authoritative collection of essays, each drawing on Bill Green's influential '3D' model of the cultural, critical, and operational dimensions involved in literacy, pedagogy, and practice. The book is divided into three sections, which cover the model in theory, the model in practice, and extending the model. Literacy in 3D presents a core framework for curriculum and pedagogy design within the New Literacy Studies tradition. As an up-to-date account of a long-established, overtly dynamic model, this important book explores and engages with its integrated perspectives to emphasize contemporary literacy dimensions and their interplay. It contains practical examples of application, as well as challenges and outcomes, in using the 3D model across a range of contexts and subject areas. The book is a timely and richly informed resource for all literacy educators, researchers, practitioners, and policy makers at various levels. *** This review cannot do justice to the richness and complexity of the studies and insights offered for researchers and educators. The book offers explanations of the inception and development of the 3D model that will be of interest to literacy theorists and students....Through this book the editors and their authors convincingly provide evidence of the functionality of the 3D model as a flexible, dynamic framework for literacy research and education in the 21st century. - Australian Journal of Language and Literacy, Vol. 36, No. 3, 2013

Assistive Technology for Blindness and Low Vision Roberto Manduchi,Sri Kurniawan,2018-09-03 Assistive technology has made it feasible for individuals with a wide range of impairments to engage in many activities, such as education and employment, in ways not previously possible. The key factor is to create consumer-driven technologies that solve the problems by addressing the needs of persons with visual impairments. Assistive

Technology for Blindness and Low Vision explores a broad range of technologies that are improving the lives of these individuals. Presenting the current state of the art, this book emphasizes what can be learned from past successful products, as well as what exciting new solutions the future holds. Written by world-class leaders in their field, the chapters cover the physiological bases of vision loss and the fundamentals of orientation, mobility, and information access for blind and low vision individuals. They discuss technology for multiple applications (mobility, wayfinding, information access, education, work, entertainment), including both established technology and cutting-edge research. The book also examines computer and digital media access and the scientific basis for the theory and practice of sensory substitution. This volume provides a holistic view of the elements to consider when designing assistive technology for persons with visual impairment, keeping in mind the need for a user-driven approach to successfully design products that are easy to use, well priced, and fill a specific need. Written for a broad audience, this book provides a comprehensive overview and in-depth descriptions of current technology for designers, engineers, practitioners, rehabilitation professionals, and all readers interested in the challenges and promises of creating successful assistive technology.

Curmudgucation Peter Greene,2015-08-05 Peter Greene blogs about the current state of public education with plenty of sass and not much rigor. This book includes almost 100 favorites from his popular blogs Curmudgucation and View from the Cheap Seats, and makes the case that there is much to love at US public education and much not to take serious about many of the folks who want to tear down one of our most fundamental democratic institutions.

Four Internets Kieron O'Hara,Wendy Hall,2021 The book describes the Internet, and how Internet governance prevents it fragmenting into a 'Splinternet'. Four opposing ideologies about how data flows around the network have become prominent because they are (a) implemented by technical standards, and (b) backed by influential geopolitical entities. Each of these specifies an 'Internet', described in relation to its implementation by a specific geopolitical entity. The Four Internets of the title are the Silicon Valley Open Internet, developed by pioneers of the Internet in the 1960s, based on principles of openness and efficient dataflow; the Brussels Bourgeois Internet, exemplified by the European Union with a focus on human rights and legal administration; the DC Commercial Internet, exemplified by the Washington establishment and its focus on property rights and market solutions; and the Beijing Paternal Internet, exemplified by the Chinese government's control of Internet content. These Internets have to coexist if the Internet as a whole is to remain connected. The book also considers the weaponization of the hacking ethic as the Moscow Spoiler model, exemplified by Russia's campaigns of misinformation at scale; this is not a vision of the Internet, but is parasitic on the others. Each of these ideologies is illustrated by a specific policy question. Potential future directions of Internet development are considered, including the policy directions that India might take, and the development of technologies such as artificial intelligence, smart cities, the Internet of Things, and social machines. A conclusion speculates on potential future Internets that may emerge alongside those described--

Phonics Handbook Tom Nicholson,2006-02-03 One in four school students struggle to read. The Phonics Handbook has been written to give assistance to teachers in helping students with reading difficulties. Taking a phonological approach, the book is set out in the form of lesson plans designed to be used instantly, requiring no preparation. The book is based on the wisdom gained from working with hundreds of students who have attended the author's after-school reading clinic. This is reflected in the practical approach to helping students of all ages including those with English as a second language and those with a range of difficulties including, special needs, motivational and attention problems. Phonics Handbook includes lesson plans for every phonics skill from the basic alphabet sounds through to blends, digraphs, syllable breaking and decoding Latin and Greek words. Each lesson is followed by a worksheet for students. Using this format, the book incorporates diagnostic assessment to measure what students need at the outset of teaching, as well as measuring whether the tutoring has been effective. Additional teaching strategies are given to reinforce spelling and assist reading comprehension. Strategies for 'hard to teach' students and information on reporting to parents are included, incorporating research on the best tutoring methods.
