**Four Internets** Kieron O'Hara,Wendy Hall,2021 The book describes the Internet, and how Internet governance prevents it fragmenting into a 'Splinternet'. Four opposing ideologies about how data flows around the network have become prominent because they are (a) implemented by technical standards, and (b) backed by influential geopolitical entities. Each of these specifies an 'Internet', described in relation to its implementation by a specific geopolitical entity. The Four Internets of the title are the Silicon Valley Open Internet, developed by pioneers of the Internet in the 1960s, based on principles of openness and efficient dataflow; the Brussels Bourgeois Internet, exemplified by the European Union with a focus on human rights and legal administration; the DC Commercial Internet, exemplified by the Washington establishment and its focus on property rights and market solutions; and the Beijing Paternal Internet, exemplified by the Chinese government's control of Internet content. These Internets have to coexist if the Internet as a whole is to remain connected. The book also considers the weaponization of the hacking ethic as the Moscow Spoiler model, exemplified by Russia's campaigns of misinformation at scale; this is not a vision of the Internet, but is parasitic on the others. Each of these ideologies is illustrated by a specific policy question. Potential future directions of Internet development are considered, including the policy directions that India might take, and the development of technologies such as artificial intelligence, smart cities, the Internet of Things, and social machines. A conclusion speculates on potential future Internets that may emerge alongside those described--

**GUI Design** Shan ben tu shu,2015 As technology has rapidly advanced, so too has the way we use and interact with it. Gone are the days of flat black backgrounds dotted with blocky green text; now, users expect a massive range of colors, layouts, and fonts to be used to entertain and assist them in their daily lives. GUI Design assembles the best of recent graphic user interface for a collection that provides practical encouragement for those new to the world as well as inspiration for experienced designers. The book gathers Twitters Vine video creation app for Windows phones, the vulgar-yetamusing Authentic Weather app, an application designed to help tourists follow the physical and ideological path of the Iron Curtain, and more to showcase programs that balance information flow with user experiences and highlight the creativity, inspiration, and expressive techniques used in their design. The projects within demonstrate the increasingly significant role of user interfaces in both design and our everyday lives in the modern world.

*Spatial Cognition VII* Christoph Hölscher,Thomas F. Shipley,Marta Olivetti Belardinelli,John A Bateman,Nora S. Newcombe,2010-07-30 This is the seventh volume of a series of books on fundamental research in spatial cognition. As with past volumes, the research presented here spans a broad range of research traditions, for spatial cognition concerns not just the basic spatial behavior of biological and artificial agents, but also the reasoning processes that allow spatial planning across broad spatial and temporal scales. Spatial information is critical for coordinated action and thus agents interacting with objects and moving among objects must be able to perceive spatial relations, learn about these relations, and act on them, or store the information for later use, either by themselves or communicated to others. Research on this problem has included both psychology, which works to understand how humans and other mobile organisms solve these problems, and computer science, which considers the nature of the information available in the world and a formal consideration of how these problems might be solved. Research on human spatial cognition also involves the application of representations and processes that may have evolved to handle object and location information to reasoning about higher-order problems, such as displaying non-spatial information in diagrams. Thus, work in spatial cognition extends beyond psychology and computer science into many disciplines including geography and education. The Spatial Cognition conference offers one of the few forums for consideration of the issues spanning this broad academic range.
