Palliative Treatment for Advanced Cancer Patients Cynthia Pereira de Araújo, 2023-05-05 This book presents an important reflection on the concept and limits of the Fundamental Right to Health as opposed to a supposed "Right to Hope" in the context of the treatment of patients with advanced cancer. The central idea of the work is the question of whether and to what extent patients with advanced cancer have the right to legally demand a palliative treatment whose efficacy has not been proven from the point of view of the desired objectives. The book demonstrates how hope cannot be subject to legal protection and, also, that, even if theoretical-legal reasons were not sufficient for the absence of an abstract right to hope, ethical reasons would be. The work concludes that the best palliative care, rather than palliative treatment, guarantees the best right to health for advanced cancer patients, especially in terminal cases. In addition to this theoretical discussion, the book also presents the results of a qualitative research the author conducted with 48 advanced cancer patients in Brazil and Germany to investigate their expectations towards chemotherapy. This study has confirmed that many patients decide to undergo often toxic and exhausting treatments, unrealistically believing that their cancer is curable or that, as long as they continue with a course of chemotherapy, cancer may be beaten. *Palliative Treatment for Advanced Cancer Patients: Can Hope Be a Right?* will be of interest to health professionals and social workers working with advanced cancer patients, as well as to researchers in the fields of public health, bioethics, medical ethics and health law, especially those interested in the growing interdisciplinary field of end-of-life decision-making.

Biomimetic Principles and Design of Advanced Engineering Materials Zhenhai Xia, 2016-06-06 This book explores the structure-property-process relationship of biomaterials from engineering and biomedical perspectives, and the potential of bio-inspired materials and their applications. A large variety of natural materials with outstanding physical and mechanical properties have appeared in the course of evolution. From a bio-inspired viewpoint, materials design requires a novel and highly cross disciplinary approach. Considerable benefits can be gained by providing an integrated approach using bio-inspiration with materials science and engineering. The book is divided into three parts; Part One focuses on mechanical aspects, dealing with conventional material properties: strength, toughness, hardness, wear resistance, impact resistance, self-healing, adhesion, and adaptation and morphing. Part Two focuses on functional materials with unique capabilities, such as self-cleaning, stimuli-response, structural

color, anti-reflective materials, catalytic materials for clean energy conversion and storage, and other related topics. Part Three describes how to mimic natural materials processes to synthesize materials with low cost, efficient and environmentally friendly approaches. For each chapter, the approach is to describe situations in nature first and then biomimetic materials, fulfilling the need for an interdisciplinary approach which overlaps both engineering and materials science.

CARE-W Sveinung Saegrov, 2005-08-31 CARE-W was a joint European initiative to develop a framework for water network rehabilitation. The project was supported by the European Commission under the Fifth Framework Programme for Research and Development. The aim of CARE-W was to support European water companies in their decisions on upgrading their water supply. The system has been developed for and tested by cities representing all parts of Europe. CARE-W consists of software dealing with fundamental instruments for estimating the current and future condition of water networks, including tools to assess performance indicators (PI), to predict pipe failures (FAIL) and to calculate water supply reliability (REL). Based on the results of these tools, annual rehabilitation projects are selected and ranked (ARP tool). Information of network is further used for the estimation of long-term investments needs (LTP). The tools are operated jointly within the CARE-W Manager, which also contains facilities for using pipe network databases, geographical information systems (GIS) and input/output routines. The results from using the procedures are presented by reports, in tables and graphically. Aimed at planning engineers, water utilities and municipalities and consultants working in the increasingly growing field of the planning of rehabilitation of water networks in cities.
