The new online trade Gerrit Heinemann, 2023-03-30 This book presents developments and future trends in e-commerce, which is shaped by customers' new digital communication and consumption patterns. Gerrit Heinemann sheds light on e-commerce business models, channel excellence as well as success factors such as digital time advantages and customer centricity. He analyzes the digital challenges and highlights the consequences and opportunities associated with online commerce. Recognized best practices illustrate how successful digital commerce works and what the lessons learned of the past years are. The 13th edition describes which new approaches will shape the future of online retail and which developments will remain long-term issues. While, for example, app and smartphone commerce, including mobile payment, continue to be long-running issues, the environmental issue is coming at online commerce with a concentrated charge. This means that people's growing need for more sustainability and consideration for the environment has now also arrived in e-commerce. This work is therefore devoted to sustainable e-commerce in the context of online logistics, which runs counter to the new trend towards quick commerce. The topics of climate neutrality and returns management are also increasingly coming into focus. In addition, current topics such as the marketplace theme and social commerce will be explored in greater depth. Furthermore, numerous new legal requirements are taken into account, which place increased obligations on marketplace operators in particular. The content - Meta-targeting and business ideas in online retailing - Business model of online trade - Forms of online trade - Business systems and benchmarks in e-commerce - Best practices and risks in online retailing

New Trends in Intelligent Software Methodologies, Tools and Techniques H. Fujita, G. Guizzi, 2023-10-03 Software is an essential enabler for science and the new economy, but current software methodologies, tools, and techniques are often still not sufficiently robust or reliable for the constantly changing and evolving market, and many promising approaches have proved to be no more than case-oriented methods that are not fully automated. This book presents the proceedings of SoMeT_23, the 22nd International Conference on New Trends in Intelligent Software Methodology, Tools, and Techniques, held from 20-22 September 2023 in Naples, Italy. The conference brings together researchers and practitioners to share original research and practical development experience in software science and related new technologies, and is an opportunity for the software-science community to take stock of where they are today and consider future directions. The 25 papers included here were carefully selected from the many high-quality submissions received after a rigorous review process, with each paper typically being reviewed by 3 or 4 reviewers. Topics covered range from research practices, techniques and methodologies to the solutions required by global business. SoMeT_23 focused in particular on intelligent software, the application of artificial intelligence techniques in software development, and tackling human interaction in the development process for better high-level interface, with an emphasis on human-centric software methodologies, end-user development techniques, and emotional reasoning for an optimum performance between design tool and user. Exploring trends, theories, and challenges in the integration of software and science for tomorrow's global information society, the book captures a new state-of-the-art in software science and its supporting technology and will be of interest to all those working in the field.

Great Power Politics in the Fourth Industrial Revolution Glenn
Diesen, 2021-03-25 Why and how will the fourth industrial revolution impact
great power politics? Here, Glenn Diesen utilizes a neoclassical approach to
great power politics to assess how far the development of AI, national and
localized technological ecosystems and cyber-warfare will affect great power
politics in the next century. The reliance of modern economies on
technological advances, Diesen argues, also compels states to intervene
radically in economics and the lives of citizens, as automation radically
alters the economies of tomorrow. A groundbreaking attempt to contextualize
the fourth industrial revolution, and analyse its effects on politics and
international relations.
