IBM Security Solutions Architecture for Network, Server and Endpoint Axel Buecker, Kent Browne, Louis Foss, Jaco Jacobs, Vladimir Jeremic, Carsten Lorenz, Craig Stabler, Joris Van Herzele, IBM Redbooks, 2011-02-17 Threats come from a variety of sources. Insider threats, as well as malicious hackers, are not only difficult to detect and prevent, but many times the authors of these threats are using resources without anybody being aware that those threats are there. Threats would not be harmful if there were no vulnerabilities that could be exploited. With IT environments becoming more complex every day, the challenges to keep an eye on all potential weaknesses are skyrocketing. Smart methods to detect threats and vulnerabilities, as well as highly efficient approaches to analysis, mitigation, and remediation, become necessary to counter a growing number of attacks against networks, servers, and endpoints in every organization. In this IBM® Redbooks® publication, we examine the aspects of the holistic Threat and Vulnerability Management component in the Network, Server and Endpoint domain of the IBM Security Framework. We explain the comprehensive solution approach, identify business drivers and issues, and derive corresponding functional and technical requirements, which enables us to choose and create matching security solutions. We discuss IBM Security Solutions for Network, Server and Endpoint to effectively counter threats

and attacks using a range of protection technologies and service offerings. Using two customer scenarios, we apply the solution design approach and show how to address the customer requirements by identifying the corresponding IBM service and software products.

It Security Products for Corporate Users Peter Stelzhammer, Andreas Clementi, Thomas Arlt, Philippe Rödlach, 2010 Most organizations are aware of the risks threatening their IT environment. Viruses, trojans, worms, exploits and many other threats represent a serious danger for the IT department. A collapse of the IT system could mean grave financial losses right up to insolvency for a company. The IT departments of companies are conscious of this problem. Getting the best protection against these threats is the only issue. A simple file antivirus solution alone is totally inadequate, as there are too many threats from contaminated e-mails, exploits etc. What is required is a comprehensive suite that provides protection against all of these.

Functional Diversity Because of the immense functional diversity of various antivirus suites and corporate products, it is becoming increasingly difficult for decision-makers in the IT sector to get a proper overview. Which product should one opt for and for which areas of protection? During these tests our main focus has not been on malware detection rates, but on the products' handling and user-friendliness, and the scope of functionality. We have compiled the functional scope of various products in a detailed table. For malware detection rates of individual products please refer to the tests of our website: <http://www.av-comparatives.org>
