**Climate Change** The Royal Society, National Academy of Sciences, 2014-02-26 Climate Change: Evidence and Causes is a jointly produced publication of The US National Academy of Sciences and The Royal Society. Written by a UK-US team of leading climate scientists and reviewed by climate scientists and others, the publication is intended as a brief, readable reference document for decision makers, policy makers, educators, and other individuals seeking authoritative information on some of the questions that continue to be asked. Climate Change makes clear what is well-established and where understanding is still developing. It echoes and builds upon the long history of climate-related work from both national academies, as well as on the newest climate-change assessment from the United Nations' Intergovernmental Panel on Climate Change. It touches on current areas of active debate and ongoing research, such as the link between ocean heat content and the rate of warming.

Bending Adversity David Pilling, 2015-02-24 “[A]n excellent book...” —The Economist Financial Times Asia editor David Pilling presents a fresh vision of Japan, drawing on his own deep experience, as well as observations from a cross section of Japanese citizenry, including novelist Haruki Murakami, former prime minister Junichiro Koizumi, industrialists and bankers, activists and artists, teenagers and octogenarians. Through their voices, Pilling's *Bending Adversity* captures the dynamism and diversity of contemporary Japan. Pilling's exploration begins with the 2011 triple disaster of earthquake, tsunami, and nuclear meltdown. His deep reporting reveals both Japan's vulnerabilities and its resilience and pushes him to understand the country's past through cycles of crisis and reconstruction. Japan's survivalist mentality has carried it through tremendous hardship, but is also the source of great destruction: It was the nineteenth-century struggle to ward off colonial intent that resulted in Japan's own imperial endeavor, culminating in the devastation of World War II. Even the postwar economic miracle—the manufacturing and commerce explosion that brought unprecedented economic growth and earned Japan international clout might have been a less pure victory than it seemed. In *Bending Adversity* Pilling questions what was lost in the country's blind, aborted climb to #1. With the same rigor, he revisits 1990—the year the economic bubble burst, and the beginning of Japan's “lost decades”—to ask if the turning point might be viewed differently. While financial struggle and national debt are a reality, post-growth Japan has also successfully maintained a stable standard of living and social cohesion. And while life has become less certain, opportunities—in particular for the young and for women—have diversified. Still, Japan is in many ways a country in recovery, working to find a way forward after the events of 2011 and decades of slow growth. *Bending Adversity* closes with a reflection on what the 2012 reelection of Prime Minister Shinzo Abe, and his radical antideflation policy, might mean for Japan and its future. Informed throughout by the insights shared by Pilling's many interview subjects, *Bending Adversity* rigorously engages with the social, spiritual, financial, and political life of Japan to create a more nuanced representation of the oft-misunderstood island nation and its people. The Financial Times “David Pilling quotes a visiting MP from northern England, dazzled by Tokyo's lights and awed by its bustling prosperity: ‘If this is a recession, I want one.’ Not the least of the merits of Pilling's hugely enjoyable and perceptive book on Japan is that he places the denunciations of two allegedly “lost decades” in the context of what the country is really like and its actual achievements.” The Telegraph (UK) “Pilling, the Asia editor of the Financial Times, is perfectly placed to be our guide, and his insights are a real rarity when very few Western journalists communicate the essence of the world's third-largest economy in anything but the most superficial ways. Here, there is a terrific selection of interview subjects mixed with great reportage and fact

selection... he does get people to say wonderful things. The novelist Haruki Murakami tells him: "When we were rich, I hated this country"... well-written... valuable." Publishers Weekly (starred): A probing and insightful portrait of contemporary Japan.

*The Future of the Internet* Jonathan Zittrain, 2009-05-28 In *The Future of the Internet: And How to Stop It* Jonathan Zittrain explores the dangers the internet faces if it fails to balance ever more tightly controlled technologies with the flow of innovation that has generated so much progress in the field of technology. Zittrain argues that today's technological market is dominated by two contrasting business models: the generative and the non-generative. The generative models - the PCs, Windows and Macs of this world - allow third parties to build upon and share through them. The non-generative model is more restricted; appliances such as the xbox, iPod and tomtom might work well, but the only entity that can change the way they operate is the vendor. If we want the internet to survive we need to change. People must wake up to the risk or we could lose everything.

*Field Manual for the Investigation of Fish Kills* Fred P. Meyer, Lee A. Barclay, 1990 Fish kills are graphic evidence of serious problems in a lake or stream. If the kill is related to the presence of toxic chemicals, there may be human health concerns, in addition to the obvious damage to the ecosystem and the fisheries resources. Depending on the cause of a fish kill, legal and economic ramifications may be involved. If the kill is caused by human or corporate actions, litigation is likely to follow, with possible court-awarded damages and assessed costs for cleanup and restoration. This manual is intended to help fisheries biologists and others to prepare for a fish kill investigation.

**Hexagon (KH-9) Mapping Camera Program and Evolution** Maurice G. Burnett, 2012 The United States developed the Gambit and Hexagon programs to improve the nation's means for

peering over the iron curtain that separated western democracies from east European and Asian communist countries. The inability to gain insight into vast denied areas required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964. The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.

How We Became Posthuman N. Katherine Hayles, 1999-02-15 In this age of DNA computers and artificial intelligence, information is becoming disembodied even as the bodies that once carried it vanish into virtuality. While some marvel at these changes, envisioning consciousness downloaded into a computer or humans beamed Star Trek-style, others view them with horror, seeing monsters brooding in the machines. In *How We Became Posthuman*, N. Katherine Hayles separates hype from fact, investigating the fate of embodiment in an information age. Hayles relates three interwoven stories: how information lost its body, that is, how it came to be conceptualized as an entity separate from the material forms that carry it; the cultural and technological construction of the cyborg; and the dismantling of the liberal humanist subject in cybernetic discourse, along with the emergence of the posthuman. Ranging widely across the history of technology, cultural studies, and literary criticism, Hayles shows what had to be erased, forgotten, and elided to conceive of information as a disembodied entity. Thus she moves from the post-World War II Macy Conferences on cybernetics to the 1952 novel *Limbo* by cybernetics aficionado Bernard Wolfe; from the concept of self-making to Philip K. Dick's literary explorations of hallucination and reality; and from artificial life to postmodern novels exploring the implications of seeing humans as cybernetic systems. Although becoming posthuman can be nightmarish, Hayles shows how it can also be liberating. From the birth of cybernetics to artificial life, *How We Became Posthuman* provides an indispensable account of how we arrived in our virtual age, and of where we might go from here.
