**Candy Planet** Shirui Sharon Liu,2022-07-12 Somewhere faraway in the universe, there is a place called the Candy Planet. There, a group of fairies live in love and happiness, having all kinds of fun, learning and practicing their magic, and having sports competitions. There is a lake on the Candy Planet called Love Pool, with water as blue as the sky and waves gently spreading on the peaceful surface. The lake's surface often reflects rainbows, and lovely plants and animals are everywhere. The fairies of the Candy Planet sleep in the pool just like mermaids, and they can do all kinds of magic with their special powers. They have pets and grow flowers, and they can even travel to other places, such as various countries on Earth! This children's story paints a picture of a wonderful, beautiful world where gentle fairies and animals live together in peace and harmony, free from all troubles and worries.

**Running Across a Candy Planet** Jim Schroeder,2016-12-21 Running Across a Candy Planet came about first, as an account to capture the feelings I experienced during my long runs along the beach; and secondly, as a means to share my photography with a wider audience. My running journey has led me to observe many beautiful sunrises, sunsets and other beauties of nature. The photographic and poetic running journey began in Starved Rock State Park, outside of LaSalle, Illinois, in August 1999, when I was an expatriate in Australia working in the States for a spell. At sunrise, I'd run the trails before work, photograph my surroundings and write a short poem about what I saw or thought. Returning to the US in 2007 and now living in Florida I began running beaches and trails carrying a smart phone to record my adventures. I renewed my hobby of photography, combined photographing nature with running and writing poetry; the results are captured in this book.

**AstroNuts Mission Three: The Perfect Planet** Jon Scieszka,2021-09-21 This series is The Hitchhiker's Guide to the Galaxy meets The Bad Guys in a funny, visually daring adventure series for reluctant readers, teachers, and librarians alike. This hilarious, visually groundbreaking read is the conclusion to a major series by children's literature legend Jon Scieszka. The book follows a final mission, where AlphaWolf, LaserShark, SmartHawk, and StinkBug must find a planet fit for human life after we've finally made Earth unlivable. Time is up for our friends the AstroNuts. In fact, time is up for you, too. If they don't succeed on this mission, Earth is doomed! So when the team finds out they're being sent to a place called the perfect planet, their mission sounds way too easy. Unfortunately, the second they land, they realize they'll be dealing with the most dangerous species of all time . . . humans. Huh? Where in the universe is this supposedly perfect place? And how will the Nuts manage to convince the humans to risk death . . . for the sake of their lives?! Featuring full-color illustrations throughout, Planet Earth as the narrator, an out-of-this-world gatefold, and how-to-draw pages in the back, eager and reluctant readers alike will be over the moon about this new mission. Full of laugh-out-loud humor with a thoughtful commentary on the reality of climate change at the core of the story, this creatively illustrated, full-color, action-packed space saga is a can't-put-it-down page-turner for readers of all levels and fans ready to blast past Dogman. EXCITING BIG-NAME TALENT: Jon Scieszka is one of the biggest names in children's books. The first National Ambassador of Young People's literature, he and Steven Weinberg toured extensively for this series. They'll continue making their way around the world for Book 3! You might have met them at ALA, the National Book Festival, the Rabbit HOle, the Brooklyn Book Festival, the Illinois Reading Council, the Tween Reads Book Festival, the Texas Book Festival, the NYC Department of Education Fall Conference, the 826 Story Soirée in New York, or NCTE in Baltimore! POPULAR SERIES: MISSIONS 1 and 2 received starred reviews, amazing blurbs, and tons of industry love. MISSION 1 was an Amazon Best Book of the Year! Dav Pilkey, Jennifer Holm, LeUyen Pham, and Gene Luen Yang are all big fans—check out those blurbs! FUN AND SCIENTIFIC: The book incorporates STEM elements in a way that readers will find fun and entertaining, while teachers and librarians will find it clever and original. PERFECT FOR BUDDING GRETA THUNBERGS: This book successfully talks about the effect of climate change and impels its readers to take action, without feeling didactic or message-y at all. TIES TO REAL-WORLD ISSUES: Readers will recognize quite a few dilemmas the AstroNuts face from current events on Earth. Making connections between fiction and non-fiction is a big developmental milestone for young readers, and this book works as an effective allegory for our most dire contemporary concerns. RELUCTANT READER-FRIENDLY: The book is a great vehicle for reluctant readers, featuring cool topics and bright art, and relying on visual literacy and very few words. A CONSTELLATION OF TOPICS: Space, STEM, and talking animals: There's something here for every reader! LOLs FOR DAYS: The book is funny and will delight kids who love books like Wimpy Kid, The 39-Story Treehouse, Dog Man, and Captain Underpants. While it contains serious ideas, it's a quick, easy, and fun visual read. GROUNDBREAKING DESIGN: The hundreds of pages of full-color art are dynamic and engaging—and it doesn't look like anything else out there. Steven Weinberg bases his art on public domain pieces from the Smithsonian museum! Teachers turn to the books for this element of the art and use it in classrooms to talk about collage, idea sourcing, history, and art medium. PERFECT ART PROJECT: On the website, kids can download pages of the original art and use it to make their own hybrid animal collages. Perfect for: • Perfect for fans of Dog Man, Big Nate, Wimpy Kid, and Captain Underpants • Families who care about the environment • Grandparents • Teachers and educators who are looking to introduce STEM and environmental topics to children • Librarians

**Graph Neural Networks: Foundations, Frontiers, and Applications** Lingfei Wu,Peng Cui,Jian Pei,Liang Zhao,2022-01-03 Deep Learning models are at the core of artificial intelligence research today. It is well known that deep learning techniques are disruptive for Euclidean data, such as images or sequence data, and not immediately applicable to graph-structured data such as text. This gap has driven a wave of research for deep learning on graphs, including graph representation learning, graph generation, and graph classification. The new neural network architectures on graph-structured data (graph neural networks, GNNs in short) have performed remarkably on these tasks, demonstrated by applications in social networks, bioinformatics, and medical informatics. Despite these successes, GNNs still face many challenges ranging from the foundational methodologies to the theoretical understandings of the power of the graph representation learning. This book provides a comprehensive introduction of GNNs. It first discusses the goals of graph representation learning and then reviews the history, current developments, and future directions of GNNs. The second part presents and reviews fundamental methods and theories concerning GNNs while the third part describes various frontiers that are built on the GNNs. The book concludes with an overview of recent developments in a number of applications using GNNs. This book is suitable for a wide audience including undergraduate and graduate students, postdoctoral researchers, professors and lecturers, as well as industrial and government practitioners who are new to this area or who already have some basic background but want to learn more about advanced and promising techniques and applications.

*The Little Book of Exoplanets* Joshua N. Winn,2023-07-11 A concise and accessible introduction to exoplanets that explains the cutting-edge science behind recent discoveries For centuries, people have speculated about the possibility of planets orbiting distant stars, but only since the 1990s has technology allowed astronomers to detect them. At this point, more than five thousand such exoplanets have been identified, with the pace of discovery accelerating after the launch of NASA's Transiting Exoplanet Survey Satellite and the Webb Space Telescope. In The Little Book of Exoplanets, Princeton astrophysicist Joshua Winn offers a brief and

engaging introduction to the search for exoplanets and the cutting-edge science behind recent findings. In doing so, he chronicles the dawn of a new age of discovery—one that has rapidly transformed astronomy and our broader understanding of the universe. Scientists now know that many Sun-like stars host their own systems of planets, some of which may resemble our solar system and include planets similar to the Earth. But, Winn tells us, the most remarkable discoveries so far have been of planets with unexpected and decidedly un-Earth-like properties, which have upended what we thought we knew about the origins of planetary systems. Winn provides an inside view of the sophisticated detective work astronomers perform as they find and study exoplanets and describes the surprising—sometimes downright bizarre—planets and systems they have found. He explains how these discoveries are revolutionizing astronomy, and he explores the current status and possible future of the search for another Earth. Finally, drawing on his own and other scientists’ work, he considers how the discovery of exoplanets and their faraway solar systems changes our perspectives on the universe and our place in it.

Its mission is exploration for commercial opportunities among the 400-odd worlds currently embraced by the conglomerate Corporation. The Jobs also carries freight, passengers, scientists, life support biologicals and whatever on its three-year transit through the Bubble, an empty void in space that allows for near-relativistic speeds. Until now, extraterrestrial life was usually little more than intelligent lichens with occasional sentient critters about as bright as a hamster. Now the Jobs stumbles upon a gigantic pristine undeniably genuine by gosh alien artifact sitting on its own artificial planet, the first indisputably authentic proof of non-human intelligence. It was here in the Bubble where it shouldnt be, couldnt be. Thats why they call it the Bubble. Dac had to check it out. The situation devolves from the initial euphoria over the find and the possibility of unimaginable riches for all hands, down to the mindless evil of the alien find and Dacs desperate efforts to avoid almost certain and complete destruction of the Jobs. Those well-intentioned efforts backfire at every turn.
