Digital Tools for Computer Music Production and Distribution Politis, Dionysios,Tsalighopoulos, Miltiadis,Iglezakis, Ioannis,2016-06-27 It is clear that the digital age has fully embraced music production, distribution, and transcendence for a vivid audience that demands more music both in quantity and versatility. However, the evolving world of digital music production faces a calamity of tremendous proportions: the asymmetrically increasing online piracy that devastates radio stations, media channels, producers, composers, and artists, severely threatening the music industry. *Digital Tools for Computer Music Production and Distribution* presents research-based perspectives and solutions for integrating computational methods for music production, distribution, and access around the world, in addition to challenges facing the music industry in an age of digital access, content sharing, and crime. Highlighting the changing scope of the music industry and the role of the digital age in such transformations, this publication is an essential resource for computer programmers, sound engineers, language and speech experts, legal experts specializing in music piracy and rights management, researchers, and graduate-level students across disciplines.

88 *Privacy Breaches to Beware of* Kevin Shepherdson, William Hioe, Lyn Boxall, 2016-05-15 Data protection laws are new in Singapore, Malaysia and Philippines. Indonesia and Thailand will be introducing new laws in 2016. In

the European Union, the General Data Protection Regulation (GDPR) – a single law across all of EU – is expected to come into force from 2018. There are also strict laws in the US that govern the processing of personal data. Over a hundred countries in the world have a comprehensive data protection law and it is very easy for individuals and companies to breach these laws. Data or privacy breaches are on the rise and businesses can be prosecuted under data protection laws. Fines for non-compliance can be from S\$1 million in Singapore, up to three years jail in Malaysia, and up to 4% of global revenues for EU countries. The focus on this book is operational compliance. The book is for everyone as all of us in the course of our daily work process personal data. Organised into sections, each idea provides practical advice and examples of how a breach of the law may happen. Examples cover HR, Finance, Admin, Marketing, etc, allowing the reader to relate to his or her own area of work

Rail Human Factors around the World John R Wilson, Ann Mills, Theresa Clarke, Jane Rajan, Nastaran Dadashi, 2012-09-13 The rail human factors/ergonomics community has grown quickly and extensively, and there is much increased recognition of the vital importance of ergonomics/human factors by rail infrastructure owners, rail operating companies, system developers, regulators and national and trans-national government. This book, the third on rail human factors, is drawn from papers presented at the Lille 3rd International Conference on Rail Human Factors. The contributions cover

the range of human and organisational issues on the railway, from driving to signalling and control to maintenance and engineering work, to passengers and security issues such as trespass, and address improvements in safety, reliability, use of capacity, efficiency and quality. The book represents the best of recent work in rail human factors, and starts to define the framework for the next few years. As well as the human factors areas listed above, the conference and thus the book are notable for sessions on simulation in rail human factors and on human factors in metro design and operation. The book also reflects the increased attention being paid to, and developments in, understanding all aspects of rail stakeholders' behaviour, and also the contribution of ergonomics/human factors to innovative network control systems which will enhance reliability, safety and use of capacity. The book will be of interest to a number of groups: those working in the rail sector from a human factors point of view; the larger rail industry and related bodies generally; and in terms of transferrable knowledge to ergonomists and human factors specialists working in other industries.

Cases in Entrepreneurship Eric A. Morse, 2006 This casebook is based upon a cognitive framework of entrepreneurship. The concepts covered in this work include searching for ideas; screening those ideas for business opportunity; planning to exploit the opportunity; financing the opportunity; and setting up and growing the business.

Jacques Ellul on Violence, Resistance, and War Jeffrey M. Shaw, Timothy J. Demy, 2016-04-12 The last few decades seem to have ushered in new levels of violence, challenging the notion that our globalized, interconnected world offers increased prospects for cooperation and peace. Many philosophers and theologians have offered various reasons for why this might be so, but none has come so close as the French philosopher Jacques Ellul to providing a comprehensive explanation for many of the pitfalls inherent in increasing levels of technological advance. The chapters in this book explore the phenomena of violence, terrorism, and war through the lens of Ellul's thought. Readers unfamiliar with Ellul will find as much to consider in these chapters as those who have studied Ellul extensively, and for both the novice and the expert, this book offers an opportunity to both evaluate and reevaluate Ellul's extensive thought on matters of importance to contemporary society.

CARE-S Sveinung Saegrov, 2006-03-31 CARE-S presents the result of an extensive EU project, Computer Aided Rehabilitation of Sewer and Storm Water

Networks. The projects developed a complete management system for sewer and storm water assets, including methods and software. It comprises methods and models for the three levels necessary of management, namely the long-term planning, the project ranking and the technology selection. The results of a comprehensive testing of CARE-S in representative European cities are also included in the book. Long-term planning relies on state-of-the-art description, judgement of future service-life and available measurements, including CCTV. This information is handled in tools for Performance Indicators, network condition prediction and investment needs. Project ranking is conducted by an elimination system and includes analysis by tools for structural condition, hydraulic performance and customer requirements. The system identifies projects that can be included within actual budget limits. Selection of appropriate technologies relies on a comprehensive database for renovation and repair techniques and their properties, applied into the conditions of the single projects. The purpose of this book is to present a new generation management system of sewer and storm water assets. Due to ageing systems and increasing demands to these networks, and the complexity of systems and problems, advanced management systems are necessary to secure an optimal use of limited resources for repair, maintenance and renewal. In the future, management should be based on solid objective information given by computer programs and databases, and judged by professional management engineers. The market for modern urban water network

management including software and consulting services is expected to increase substantially during the coming years. This is the first book to consider a complete management system for sewer and storm water assets. The book presents a system that will improve the cost-effectiveness of sewer and storm water assets by at least 10%. The book presents the methodology and software for modern maintenance and renewal of wastewater networks.

Water and Wastewater Pipeline Assessment Technologies Justin

Starr, 2021-06-01 Water and wastewater infrastructure are a somewhat invisible, yet critical, part of modern life. Incredibly, many buried assets have been in service for 50-100 years and are still in good condition. Conversely, other systems fail well before their predicted design lives, causing property damage, injury, and even loss of life. In many cases, early detection could have prevented catastrophic failure, and understanding the state of underground infrastructure has become a key priority for many municipalities. Industry has responded with a number of new and innovative technologies for condition assessment, however, understanding these tools can be difficult, as many vendors treat their proprietary systems as trade secrets. **Water and Wastewater Pipeline Assessment Technologies: Classification Systems, Sensors, and Results Interpretation** provides a thorough guide to the technical workings of some of the most popular water and wastewater assessment technologies available, including CCTV crawlers, acoustic listening devices, laser sensors, 360 °video cameras, pipe

penetrating radar, and more. Features: Presents an overview of current technologies in CCTV inspection, including next generation video formats, high-definition resolution, and fisheye/sidescan technology. Provides helpful tips and tricks to cut through technical jargon and identify the technological specifications to compare between multiple vendors. Examines the pros and cons of competing technologies including laser and lidar, and provides an overview of unique approaches such as Pipe Penetrating Radar, Focused Electrode Leak Location, and more. Highlights the importance of coding standards, data management, and software tools that can be leveraged to create a successful asset management program. Water and Wastewater Pipeline Assessment Technologies: Classification Systems, Sensors, and Results Interpretation provides a mixture of theory and real-world, practical considerations ranging from deployment tips and data exchange formats to the technical limitations of different technologies. The book is a valuable resource for municipal employees, project engineers, and others involved in designing and implementing major inspection programs.

The Impact of Technology on the Criminal Justice System Emily Pica, David Ross, Joanna Pozzulo, 2024-02-26 This comprehensive volume explores the impact of emerging technologies designed to fight crime and terrorism. It first reviews the latest advances in detecting deception, interrogation, and crime scene investigation, before then transitioning to the role of technology in collecting and evaluating evidence from lay witnesses, police body cameras,

and super-recognizers. Finally it explores the role of technology in the courtroom with a particular focus social media, citizen crime sleuths, virtual court, and child witnesses. It shines light on emerging issues, such as whether new norms have been created in the emergence of new technologies and how human behaviour has shifted in response. Based on a global range of contributions, this volume provides an overview of the technological explosion in the field of law enforcement and discusses its successes and failures in fighting crime. It is valuable reading for advanced students in forensic or legal psychology and for practitioners, researchers, and scholars in law, criminal justice, and criminology.

Media, Surveillance and Affect Nicole Falkenhayner, 2018-12-21 Surveillance has become a part of everyday life: we are surrounded by surveillance technologies in news media, when we go down the street, in the movies, and even carry them in our own pockets in the form of smartphones. How are we constructing imaginaries of our realities and of ourselves as living in structures of control? What affects, emotions and feelings do we develop in societies of control, and how do we narrate them? Media, Surveillance and Affect represents a big step in revealing the depth of the entanglement of surveillance technology not only with our everyday lives, but with our imaginaries and affective experiences. Combining insights from affect studies with narratological and visual cultural studies approaches, the case studies in this book focus on how surveillance cameras and surveillance camera images

have been used to narrate affective stories of Great Britain. Cases discussed include the memory work surrounding the murder of James Bulger in 1993 and of Lee Rigby in 2011, but also novels and artworks. With a multidisciplinary approach Media, Surveillance and Affect will appeal to students, scholars and specialists interested in fields such as media and cultural studies, literary studies, cultural sociology and surveillance studies.

Closed Circuit Television Joe Cieszynski, 2006-12-28 Closed Circuit Television (CCTV) surveillance remains a growing industry in response to increased security threats, and whilst new developments have brought clearer images, digital recording and high speed data transmission, effective security systems still rely upon proper specification and installation by engineers with an in depth knowledge of CCTV principles and technology. The third edition of Closed Circuit Television provides a thorough technical guide for all those involved in the design, specification, installation and maintenance of CCTV systems. Fully dual-standard for PAL and NTSC systems, the book covers the essential equipment and topics of relevance to practitioners, managers and students on vocational and industry training courses. Extended coverage of flat screen devices, digital recording, and a new chapter on networking principles, bring this popular guide up to date with the latest developments in the field. Joe Cieszynski is a well-known technical writer with a wealth of experience in the security industry. After many years of college lecturing on TV, video and security topics, he

currently acts as City & Guilds' Chief Examiner for security systems and provides independent CCTV system consultancy. *Demystifies CCTV technology for installers and managers *Concise, accessible text ideal for hard-pressed practitioners and students *Fully dual-standard coverage for PAL and NTSC based systems
