Leonardo's Writings and Theory of Art Claire J. Farago,1999 Also available as the fourth book in a 5 volume set (ISBN#0815329334)

A Chronology of Leonardo Da Vinci's Architectural Studies After 1500 Carlo Pedretti,Pope Leo X,1962

The Da Vinci Globe Stefaan Missinne,2019-01-17 A chance discovery at a distinguished London map fair in 2012 by a Belgian globe collector produced the most unique of finds: a distinct globe with mysterious images, such as old ships, sailors, a volcano, a hybrid monster, pentimenti, waving patterns, conic individualised mountains, curving rivers, vigorous coastal lines, chiaroscuro and an unresolved triangular anagram, which remains an enigma. The globe is hand-engraved in great detail on ostrich egg shells from Pavia by a left-handed Renaissance genius of unquestionable quality. It shows secret knowledge of the map world from the time of Columbus, Cabral, Amerigo Vespucci and Leonardo da Vinci. Central and North America are covered by a vast ocean. The da Vinci globe originates from Florence and dates from 1504. It marks the first time ever that the names of countries such as Brazil, Germania, Arabia and Judea have appeared on a globe. A Leonardo drawing for this globe, showing the coast of the New World and Africa has been discovered in the British Library. This book brings the reader through a fabulous journey of scholars, maps, riddles, rebuses, iconographic symbols and enigmatic phrases such as HIC SVNT DRACONES to illuminate the da Vinci globe.

It details 500 years of mystery, fine scholarship and expert forensic testing at numerous material science laboratories the world over. The da Vinci globe now takes its rightful place, surpassing the Lenox globe, its copper-cast identical twin, as the most mysterious globe of our time. As such, this monograph is an essential text in Leonardo studies and in the history of cartography.

Learning from Leonardo Fritjof Capra, 2013-11-19 Leonardo da Vinci was a brilliant artist, scientist, engineer, mathematician, architect, inventor, and even musician—the archetypal Renaissance man. But he was also a profoundly modern man. Not only did Leonardo invent the empirical scientific method over a century before Galileo and Francis Bacon, but Capra's decade-long study of Leonardo's fabled notebooks reveals that he was a systems thinker centuries before the term was coined. At the very core of Leonardo's science, Capra argues, lies his persistent quest for understanding the nature of life. His science is a science of living forms, of qualities and patterns, radically different from the mechanistic science that emerged 200 years later. Because he saw the world as an integrated whole, Leonardo always applied concepts from one area to illuminate problems in another. His studies of the movement of water informed his ideas about how landscapes are shaped, how sap rises in plants, how air moves over a bird's wing, and how blood flows in the human body. His observations of nature enhanced his art, his drawings were integral to his scientific studies, and he brought art,

science, and technology together in his beautiful and elegant mechanical and architectural designs. Capra describes seven defining characteristics of Leonardo da Vinci's genius and includes a list of over forty discoveries he made that weren't rediscovered until centuries later. Capra follows the organizational scheme Leonardo himself intended to use if he ever published his notebooks. So in a sense, this is Leonardo's science as he himself would have presented it. Obviously, we can't all be geniuses on the scale of Leonardo da Vinci. But his persistent endeavor to put life at the very center of his art, science, and design and his recognition that all natural phenomena are fundamentally interconnected and interdependent are important lessons we can learn from. By exploring the mind of the preeminent Renaissance genius, we can gain profound insights into how to address the complex challenges of the 21st century.

Leonardo da Vinci Allison Lee Palmer, 2018-12-15 *Leonardo da Vinci: A Reference Guide to His Life and Works* covers his life and work, beginning with his paintings, including several he never completed, that form the core of his artistic oeuvre. The extensive A to Z section includes several hundred entries. The bibliography provides a comprehensive list of publications concerning his life and work.

Leonardo Da Vinci on Painting Leonardo (da Vinci), Carlo Pedretti, 1964

Leonardo's Fables Giuditta Cirnigliaro, 2022-12-28 An exploration of the compositional methods and sources of Leonardo's fables to investigate their relationship with illustrations and scientific studies.

Leonardo's Lost Robots Mark Rosheim, 2006-06-15 This book reinterprets Leonardo da Vinci's mechanical design work, revealing a new level of sophistication not recognized by art historians or engineers. The book reinterprets Leonardo's legacy of notes, showing that apparently unconnected fragments from dispersed manuscripts actually comprise cohesive designs for functioning automata. Using the rough sketches scattered throughout almost all of Leonardo's notebooks, the author has reconstructed Leonardo's programmable cart, which was the platform for other automata. Through a readable, lively narrative, the author explains how he reconstructed da Vinci's designs.

Leonardo. Art and science Enrica Pescio, 2013-02-28

Leonardo Da Vinci Master Draftsman Leonardo (da Vinci), Rachel Stern, Alison Manges, Metropolitan Museum of Art (New York, N.Y.), 2003 This handsome book offers a unified and fascinating portrait of Leonardo as draftsman, integrating his roles as artist, scientist, inventor, theorist, and teacher. 250 illustrations.

Leonardo da Vinci Walter Isaacson, 2017-10-17 The #1 New York Times bestseller from Walter Isaacson brings Leonardo da Vinci to life in this

exciting new biography that is “a study in creativity: how to define it, how to achieve it...Most important, it is a powerful story of an exhilarating mind and life” (The New Yorker). Based on thousands of pages from Leonardo da Vinci’s astonishing notebooks and new discoveries about his life and work, Walter Isaacson “deftly reveals an intimate Leonardo” (San Francisco Chronicle) in a narrative that connects his art to his science. He shows how Leonardo’s genius was based on skills we can improve in ourselves, such as passionate curiosity, careful observation, and an imagination so playful that it flirted with fantasy. He produced the two most famous paintings in history, The Last Supper and the Mona Lisa. With a passion that sometimes became obsessive, he pursued innovative studies of anatomy, fossils, birds, the heart, flying machines, botany, geology, and weaponry. He explored the math of optics, showed how light rays strike the cornea, and produced illusions of changing perspectives in The Last Supper. His ability to stand at the crossroads of the humanities and the sciences, made iconic by his drawing of Vitruvian Man, made him history’s most creative genius. In the “luminous” (Daily Beast) Leonardo da Vinci, Isaacson describes how Leonardo’s delight at combining diverse passions remains the ultimate recipe for creativity. So, too, does his ease at being a bit of a misfit: illegitimate, gay, vegetarian, left-handed, easily distracted, and at times heretical. His life should remind us of the importance to be imaginative and, like talented rebels in any era, to think different. Here, da Vinci “comes to life in all

his remarkable brilliance and oddity in Walter Isaacson's ambitious new biography...a vigorous, insightful portrait" (The Washington Post).

Luigi Russolo, Futurist Luciano Chessa, 2012-03-31 "Luigi Russolo is increasingly being recognized as an important figure in 20th century art and music, and his work deserves to be better understood. Chessa's archival research and readings of esoteric or otherwise little-known texts are impressive, and he offers a convincing account of the influence of the occult on Russolo and the Futurists in general. This book alters our conception of Russolo, Futurism, and the early artistic avant-garde."—Christoph Cox, Hampshire College "This book is timely, and merits the attention of a wider audience. Luigi Russolo, futurista makes a compelling argument that radically revises our views on a major creative figure of the twentieth century. Luciano Chessa provides vast amounts of information on the ideas and trends that influenced the Futurists, and offers a wealth of insight and observations that point the way for further research on avant-garde music and art in the twentieth century."—Paul DeMarinis, Department of Art and Art History, Stanford University

Leonardo Da Vinci's Elements of the Science of Man Kenneth D. Keele, 2014-05-10 Leonardo Da Vinci's Elements of the Science of Man describes how Da Vinci integrates his mechanical observations and experiments in mechanics into underlying principles. This book is composed of 17 chapters that highlight the principles underlying Da Vinci's research in anatomical

studies. Considerable chapters deal with Leonardo's scientific methods and the mathematics of his pyramidal law, as well as his observations on the human and animal movements. Other chapters describe the artist's anatomical approach to the mechanism of the human body, specifically the physiology of vision, voice, music, senses, soul, and the nervous system. The remaining chapters examine the mechanism of the bones, joints, respiration, heart, digestion, and urinary and reproductive systems.

The Life of Texts Carlo Caruso, 2018-12-13 The textual foundations of works of great cultural significance are often less stable than one would wish them to be. No work of Homer, Dante or Shakespeare survives in utterly reliable witnesses, be they papyri, manuscripts or printed editions. Notions of textual authority have varied considerably across the ages under the influence of different (and differently motivated) agents, such as scribes, annotators, editors, correctors, grammarians, printers and publishers, over and above the authors themselves. The need for preserving the written legacy of peoples and nations as faithfully as possible has always been counterbalanced by a duty to ensure its accessibility to successive generations at different times and in different cultural contexts. The ten chapters collected in this volume offer critical approaches to such authors and texts as Homer, the Bible, The Thousand and One Nights, Dante, Montaigne, Shakespeare, Eliot, but also Leonardo da Vinci's manuscripts uniquely combining word and image, as well as Beethoven's 'Tempest' sonata (Op. 31,

No. 2) as seen from the angle of music as text. Together the contributors argue that an awareness of what the 'life of texts' entails is essential for a critical understanding of the transmission of culture.
