Heaven Via Hell cys,2019-06-24 Adult's Historical Fiction This collection of short stories based on actual accounts of WWII that were told to me. People like Ruth, a woman who worked at the Brooklyn Navy Yard who worried about her family remaining in Europe. Rosetta, mistress of the Argentinian ambassador in Paris, who smuggled children across the border to safety. The couples who found love in the middle of the devastation. A child who never was able to speak to his parents about the numbers on the arms that held him tight. And the Japanese Americans whose lives were taken away and incarcerated by a nation they were fighting to protect.

As Good as a Dog David Rathman, 2011-02-22 AS GOOD AS A DOG A DOG CAN LIE ABOUT SOMEONE BUT NOT LIE ABOUT SOMEONE The justice system is, unfortunately, often not a friend of the family or the truth. For what crime can a person be accused, judged, convicted, and sentenced without trial or chance to speak the truth? ANSWER: CHILD ABUSE In what court is perjury permitted? ANSWER: PERJURY IS RARELY CONSIDERED IN DOMESTIC RELATIONS CASES. The answer to the question above was written in a book describing how to succeed in your divorce case. An internet ad states, Revenge in your domestic relations case can be achieved thru using the children, finances and assets. Another ad states, What is being made available are the dirtiest divorce tactics known. And what is the dirtiest tactic? It is a three letter word, LIE. LIE to the police, doctors, lawyers, and judges. LIE to the Custody Evaluator and the Custody Master. LIE to personnel in CYS, family, and friends. And what is a second dirty tactic? Have them LIE for you. The point of AS GOOD AS A DOG is to show how these dirty tactics were used and to present a means to fight them. I have given the proposal for state legislature to a member of the state senate. It is based on the experience of my wife and I, my daughter, and my grandsons.

Hormones Etienne-Emile Baulieu (ed), Paul A. Kelly, 1990-11-30 Endocrinology is a field in which enormous advances have been made in the last decade; the rate of discovery of new hormones, hormone-like molecules, receptors, and mechanisms of action is continually advancing. The development of techniques in immunology and molecular biology has led to the possibility of describing in detail the gene structure of many of the compounds involved in hormonal systems. Remarkable homology has been shown between oncogene products and various components of the endocrine network, leading to the assertion that deregulation of hormonal function is involved in the generation and/or development of cancer. We now know that the central nervous system is both a target and a production site of many hormonal products, and that hormones, neurotransmitters, growth factors and immunopeptides all act through similar mechanisms. The only second messenger known ten years ago was cAMP; today calcium, derivatives of membrane phospholipids, and protein kinases are also known to be mediators of hormone action. The very concept of hormonal systems has been expanded to include not only endocrine secretions but also para- and autohormones and their mechanisms of action; an understanding of their functions will be central to the immediate future of medicine. The discovery of hormonal molecules and endocrine interactions and the subsequent understanding of hormone related pathophysiology has led to the development of new strategies in medical treatment such as fertility control and the management of diabetes.
