Horse, Foot and Guns Version 1.1 Phil Barker, 2016-02-20 Horse Foot and Guns (HFG) is a set of quick-play army-level wargames rules for large land Battles for the period 1701-1914. This version 1.1 is a slight revision of the version 1.0 written about ten years ago by Phil Barker and for many years available as a free download. It is primarily intended for games between two players each controlling a complete army against its historical opponents using a minimum number of figures on a small table. The series' inspirations are that no current rules can cope with more than one corps per player; that few of the many wars of the period except the Napoleonic and American Civil Wars are covered by existing rule sets; and that great interest is being shown in smaller model scales for which casualty removal is impractical. Later it will be followed by HFG Version 2.0 which will extend the period to 1925 as well as detailed companion sets, initially Tricorne & Musket covering 1701-1790, Shako and Bayonet for 1791-1850, and Kepi & Rifle for 1851-1914.

Model Rules of Professional Conduct American Bar Association. House of Delegates, Center for Professional Responsibility (American Bar Association), 2007 The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

A Course In Game Theory Thomas S Ferguson, 2020-07-20 Game theory is a fascinating subject. We all know many entertaining games, such as chess, poker, tic-tac-toe, bridge, baseball, computer games – the list is quite varied and almost endless. In addition, there is a vast area of economic games, discussed in Myerson (1991) and Kreps (1990), and the related political games [Ordeshook (1986), Shubik (1982), and Taylor (1995)]. The competition between firms, the conflict between management and labor, the fight to get bills through congress, the power of the judiciary, war and peace negotiations between countries, and so on, all provide examples of games in action. There are also psychological games played on a personal level, where the weapons are words, and the payoffs are good or bad feelings [Berne (1964)]. There are biological games, the competition between species, where natural selection can be modeled as a game played between genes [Smith (1982)]. There is a connection between game theory and the mathematical areas of logic and computer science. One may view theoretical statistics as a two-person game in which nature takes the role of one of the players, as in Blackwell and Girshick (1954) and Ferguson (1968). Games are characterized by a number of players or decision makers who interact, possibly threaten each other and form coalitions, take actions under uncertain conditions, and finally receive some benefit or reward or possibly some punishment or monetary loss. In this text, we present various mathematical models of games and study the phenomena that arise. In some cases, we will be able to suggest what courses of action should be taken by the players. In others, we hope simply to be able to understand what is happening in order to make better predictions about the future.

An Entertaining Tale of Quadrupeds , 2003-07-18 An Entertaining Tale of Quadrupeds is the first English verse translation of the Greek satirical poem Diegesis Paidiophrastos ton Zoon ton Tetrapodon. Written by an anonymous author in fourteenth-century Byzantium, this vernacular allegorical poem has long been recognized as a unique document, one that appears to have originated independently of comparable works in other traditions. A medieval Animal Farm, the story describes a convention of animals in which each beast vaunts its uses to humanity while denigrating others, resulting in a cataclysmic battle. The authors provide extensive textual analysis and notes on the form, style, and context of the poem.

Astādhyāyī of Pāṇini Pāṇini, 1989 Panini's grammar of Sanskrit written in the sixth century B.C., is the earliest linguistic description of the language and is the source and inspiration for the development of comparative philosophy and modern linguistics. The Astadhyayi remains the most correct and complete grammar ever written and is considered a model for all grammars. Simotra M. Katre's expert translation of the Astadhyayi is the first English translation of the work to use Roman transliteration for the Sanskrit text. Not only scholars of Sanskrit but also general linguists will find accessible this new presentation of the classic work which relies on letters, italics, and small capitals to visually present the operation of Panini's metalinguistic technique.

It assumes only a basic knowledge of mechanics and requires no knowledge of calculus. The treatment uses primarily geometric arguments and college level algebra. Quantitative examples are given at each stage to buttress physical understanding. This text is of benefit to undergraduate and graduate students, as well as educators and researchers in the physical sciences (whether or not they have taken a thermodynamics course) who want to understand or teach the atomic/molecular origins of entropy and the second law. It is particularly aimed at those who, due to insufficient mathematical background or because of their area of study, are not going to take a traditional statistical mechanics course.
