Movies on Our Minds James E. Cutting,2021 We used to go to the movies. We used to speak of flicks, even flicking out. We used to stand in line with friends in delicious anticipation to buy tickets for a movie that got a rapturous review. We used to be ushered into blinding darkness within cavernous halls of downtown gilded-age theaters to look at enormous screens. And we might go without regard to when the feature began, enter in the middle, sit through its ending, its double-bill and shorts, and only then watch the beginning of what we wanted to see. A small personal triumph occurred when, seeing a flick with friends or family, you were the first one to get up to leave announcing that this was the place in the movie where we came in.--

3-D Revolution Ray Zone,2012-07-06 Stereoscopic cinema began in the early 19th century and exploded in the 1950s in Hollywood. Its status as

More Everyday Engineering Richard H. Moyer, Susan A. Everett ,2016-08-01 What makes a windup toy get up and go? How does an earbud operate? And why does the line you're waiting in always seem the slowest? Get middle-schoolers engaged in the fascinating science behind familiar items with *More Everyday Engineering*. Like *Everyday Engineering*, this compilation brings together activities based on the "Everyday Engineering" columns from NSTA's award-winning journal *Science Scope*. Thirteen hands-on investigations focus on three aspects of engineering: designing and building, reverse engineering to learn how something works, and constructing and testing models. Like the original collection, this book is easy to use. Each investigation is a complete lesson that includes in-depth teacher background information, expected sample data, a materials list, and a student activity sheet for recording results. The activities use simple, inexpensive materials you can find in your science classroom or at a dollar store. Whether you're a teacher, parent, or enrichment-program leader, go beyond the usual bridge-building and egg-drop activities. Spark curiosity with appealing activities that will help middle schoolers understand that engineering truly is a part of their everyday lives.

Stereoscopic Cinema and the Origins of 3-D Film, 1838-1952 Ray Zone, 2014-04-23 From stereoview cards to large-format IMAX films, 3-D technology's heightened realism and powerful visual allure have held audiences captive for over a century and a half. The technology, known as stereoscopy, creates an illusion of depth by presenting two slightly different images to the eye in print or on-screen. The advent of stereoscopic film technology excited both filmmakers and audiences, as a means of replicating all of the sounds, colors, movement, and dimensionality of life and nature for the first time. The origins of 3-D film are often linked with a proliferation of stereoscopic films in the 1950s. By the time films like *Man in the Dark* and *House of Wax* was attracting large crowds, however, the technology behind this form of filmmaking was already over a century old. *Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952*, examines this novelty period of stereoscopic film, charting its progression from Charles Wheatstone's 1938 discovery of 3-D to the 1952 release of Arch Oboler's innovative film, *Bwana Devil*. Stereoscopic specialist Ray Zone argues that the development

of stereoscopic film can best be understood through a historical analysis of the technology rather than of its inventors. Zone examines the products used to create stereoscopic images, noting such milestones as David Brewster's and Oliver Wendell Holmes's work with stereoscopes, the use of polarizing image selection, and the success of twin-strip 3-D films, among others. In addition, Zone looks at the films produced up to 1952, discussing public reception of early 3-D short films as well as longer features such as *Power of Love* in single-strip anaglyphic projection in 1922 and Semyon Ivanov's 1941 autostereoscope *Robinson Crusoe*. He integrates his examination of the evolution of 3-D film with other cinematic developments, demonstrating the connection between stereoscopic motion pictures and modern film production. *Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952*, is an exhaustive study of not only the evolution of 3-D technology and the subsequent filmmaking achievements but also the public response to and cultural impact of 3-D movies. Zone takes the reader on a voyage of discovery into the rich history of a field that predates photography and that continues to influence television and computer animation today.

Holograms Sean Johnston, 2016 This volume examines the history of the use of the hologram. Holograms are photographs of interference patterns that, when suitably illuminated, produce three-dimensional images. In its pure form, holography requires the use of laser light for illuminating the subject and for viewing the finished hologram. This work explores how holograms became embedded in modern popular culture. It traces their cultural roots in earlier visual technologies such as stereoscopes and 3-D movies, and examines how holograms of bewildering varieties added novel types of visual spectacle and appeal.

Empireland Sathnam Sanghera, 2023-02-28 A best-selling journalist's illuminating tour through the hidden legacies and modern realities of British empire that exposes how much of the present-day United Kingdom is actually rooted in its colonial past. *Empireland* boldly and lucidly makes the case that in order to understand America, we must first understand British imperialism. *Empireland* is brilliantly written, deeply researched and massively important. It'll stay in your head for years." —John Oliver, Emmy Award-winning host of *Last Week Tonight with John Oliver* With a new introduction by

the author and a foreword by Booker Prize-winner Marlon James A best-selling journalist's illuminating tour through the hidden legacies and modern realities of British empire that exposes how much of the present-day United Kingdom is actually rooted in its colonial past. Empireland boldly and lucidly makes the case that in order to understand America, we must first understand British imperialism. Empire—whether British or otherwise—informs nearly everything we do. From common thought to our daily routines; from the foundations of social safety nets to the realities of racism; and from the distrust of public intellectuals to the exceptionalism that permeates immigration debates, the Brexit campaign and the global reckonings with controversial memorials, Empireland shows how the pernicious legacy of Western imperialism undergirds our everyday lives, yet remains shockingly obscured from view. In accessible, witty prose, award-winning journalist and best-selling author Sathnam Sanghera traces this legacy back to its source, exposing how—in both profound and innocuous ways—imperial domination has shaped the United Kingdom we know today. Sanghera connects the historical dots across continents and seas to show how the shadows of a colonial past still linger over modern-day Britain and how the world, in turn, was shaped by Britain's looming hand. The implications, of course, extend to Britain's most notorious former colony turned imperial power: the United States of America, which prides itself for its maverick soul and yet seems to have inherited all the ambition, brutality and exceptional thinking of its parent. With a foreword by Booker Prize-winner Marlon James, Empireland is a revelatory and lucid work of political history that offers a sobering appraisal of the past so we may move toward a more just future.
