Intelligent Control in Energy Systems Anastasios Dounis, 2019-08-26 The editors of this Special Issue titled "Intelligent Control in Energy Systems" have attempted to create a book containing original technical articles addressing various elements of intelligent control in energy systems. In response to our call for papers, we received 60 submissions. Of those submissions, 27 were published and 33 were rejected. In this book, we offer the 27 accepted technical articles as well as one editorial. Authors from 15 countries (China, Netherlands, Spain, Tunisia, United States of America, Korea, Brazil, Egypt, Denmark, Indonesia, Oman, Canada, Algeria, Mexico, and the Czech Republic) elaborate on several aspects of intelligent control in energy systems. The book covers a broad range of topics including fuzzy PID in automotive fuel cell and MPPT tracking, neural networks for fuel cell control and dynamic optimization of energy management, adaptive control on power systems, hierarchical Petri Nets in microgrid management, model predictive control for electric vehicle battery and frequency regulation in HVAC systems, deep learning for power consumption forecasting, decision trees for wind systems, risk analysis for demand side management, finite state automata for HVAC control, robust μ -synthesis for microgrids, and neuro-fuzzy systems in energy storage.

Old Sumerian and Old Akkadian Texts in Philadelphia Aage Westenholz, 1987 This book contains the 'Akkadian Texts'

-- i.e. texts written in the Akkadian Language or script ductus -- the Enlilemaba Texts and the Onion Archive -- all three distinct archives from Nippur in Babylonia from the time of Naram-Sin and Sharkalisharri (c. 2250-2175 BC). The texts in the Akkadian archive deal with Sharkalisharri's rebuilding of Ekur, the great Temple of Enlil at Nippur. The Enlilemaba texts are the business records of a family of private citizens, and are the earliest known examples of this type of documentation from Mesopotamia. The Onion archive records the local governor's cultivation and distribution of onions, and illustrates his relations with the Imperial Sargonic government. The book is the second volume in a planned series of three tomes, OSP I-III, publishing the Old Sumerian and Old Akkadian Texts in Philadelphia. It contains the archaeological records of the individual texts, a list of joins and a concordance of museum numbers; copies, transliterations and translations of the texts as

Analysis of Power System Sub/Super-Synchronous Oscillations Caused by Grid-Connected Wind Power Generation

Wenjuan Du, Haifeng Wang, 2023-11-21 This book provides a systematic introduction to power system sub/super-synchronous oscillations caused by grid-connected wind power generation. The authors look at why oscillations occur and present methods for examining the risk of oscillations. Coverage includes state-space model based analysis and impedance model based analysis, which are the two main methods for examining the power system sub/super-synchronous oscillations. In addition, new methods for examining oscillations in wind farms are proposed. Analysis of Power System Sub/Super-Synchronous Oscillations Caused by Grid-connected Wind Power Generation provides researchers and students with a single-volume introduction to the subject and will be a valuable professional reference for practicing engineers looking for solutions to oscillation problems.

State Estimation and Stabilization of Nonlinear Systems Abdellatif Ben Makhlof, Mohamed Ali Hammami, Omar Naifar, 2023-11-06 This book presents the separation principle which is also known as the principle of separation of estimation and control and states that, under certain assumptions, the problem of designing an optimal feedback controller for a stochastic system can be solved by designing an optimal observer for the system's state, which feeds into an optimal deterministic controller for the system. Thus, the problem may be divided into two halves, which simplifies its design. In the context of deterministic linear systems, the first instance of this principle is that if a stable observer and stable state feedback are built for a linear time-invariant system (LTI system hereafter), then the combined observer and feedback are stable. The separation principle does not true for nonlinear systems in general. Another instance of the separation principle occurs in the context of linear stochastic systems, namely that an optimum state feedback controller intended to minimize a quadratic cost is optimal for the stochastic control problem with output measurements. The ideal solution consists of a Kalman filter and a linear-quadratic regulator when both process and observation noise are Gaussian. The term for this is linear-quadratic-Gaussian control. More generally, given acceptable conditions and when the noise is a martingale (with potential leaps), a separation principle, also known as the separation principle in stochastic control, applies when the noise is a martingale (with possible jumps).
