Velocity Distribution on Wing Sections of Arbitrary Shape in Compressible Potential Flow Lipman Bers,1946 As a first step toward the computation of the velocity distribution along a wing profile of arbitrary shape in a compressible fluid, the circulation-free flow around a symmetrical profile is treated under the assumption of the simplified density-speed relation due to Tchaplygin, Karman, and Tsien. The velocity distribution problem is reduced to a nonlinear integral equation which is solved by a fairly rapidly convergent iteration method. Numerical examples are given.

Historical Archaeology in South Africa Carmel Schrire,2018-12-13 This volume documents the analysis of excavated historical archaeological collections at the Cape of Good Hope, South Africa. The corpus provides a rich picture of life and times at this distant outpost of an immense Dutch seaborne empire during the contact period. Representing over three decades of excavation, conservation, and analysis, the book examines ceramics, glass, metal, and other categories of artifacts in their archaeological contexts. An enclosed CD includes a video reconstruction plus a comprehensive catalog and color illustrations of the artifacts in the corpus. The parallels and contrasts this volume reveals will help scholars studying the European expansion period to build a richer comparative picture of colonial material culture.

English Mythography in Its European Context, 1500-1650 Anna-Maria Hartmann,2018 Greco-Roman mythology and its reception are at the heart of the European Renaissance, and mythographies-texts that collected and explained ancient myths-were considered indispensable companions to any reader of literature. Despite the importance of this genre, English mythographies have not gained sustained critical attention, largely because they have been wrongly considered mere copies of their European counterparts. This volume focuses on the English mythographies written between 1577 and 1647 by Stephen Batman, Abraham Fraunce, Francis Bacon, Henry Reynolds, and Alexander Ross: it places their texts into a wider, European context to reveal their unique English take on the genre and also unfolds the significant role myth played in the broader culture of the period, influencing not only literary life, natural philosophy and poetics, but also religious conflicts and Civil War politics. In doing so it demonstrates, for the first time, the considerable explanatory value classical mythology holds for the study of the English Renaissance and its literary culture in particular, and how early modern England answered a question we still find fascinating today: what is myth?

Cultures of Commerce E. Brown,C. Gudis,M. Moskowitz,2016-10-19 While historians have explored the impact on workers of changes in American business, the broader impact on other cultural forms, and vice versa, has not been widely studied. This anthology contributes to the debate at the intersection of business history and the study of cultural forms, ranging from material to visual culture to literature.

Hemispheric Integration Niko Vicario,2020-03-31 Exploring art made in Latin America during the 1930s and 1940s, Hemispheric Integration argues that Latin America's position within a global economic order was crucial to how art from that region was produced, collected, and understood. Niko Vicario analyzes art's relation to shifting trade patterns, geopolitical realignments, and industrialization to suggest that it was in this specific era that the category of Latin American art developed its current definition. Focusing on artworks by iconic Latin American modernists such as David Alfaro Siqueiros, Joaquín Torres-García, Cândido Portinari, and Mario Carreño, Vicario emphasizes the materiality and mobility of art and their connection to commerce, namely the exchange of raw materials for manufactured goods from Europe and the United States. An exceptional examination of transnational culture, this book provides a new model for the study of Latin American art.

Environmental History of the Hudson River Robert E. Henshaw,2011-09-01 Biologists, historians, and social scientists explore the reciprocal relationships between humans and the Hudson River. The diverse contributions to Environmental History of the Hudson River examine how the natural and physical attributes of the river have influenced human settlement and uses, and how human occupation has, in turn, affected the ecology and environmental health of the river. The Hudson River Valley may be America's premier river environmental laboratory, and by bringing historians and social scientists together with biologists and other physical scientists, this book hopes to foster new ways of looking at and talking about this historically, commercially, and aesthetically important ecosystem. Native people's influences on the ecological integrity of aquatic and shoreline communities were generally local and minor, and for the first 12,000 years or so of human use, the Hudson River was valued mainly as a source of water, food, and transportation. Since the arrival of European colonists, however, commerce has been the engine that has driven development and use of the river, from the harvesting of beaver pelts and timber to the siting of manufacturing industries and power plants, and all of these uses have had pervasive effects on the river's aquatic and terrestrial ecosystems. In the meantime, aesthetic movements such as the Hudson River School of painting have sought to recover and preserve the earlier pastoral landscape, anticipating the more

recent efforts by environmentalists that have led to dramatic improvements in water quality, shoreline habitats, and fish populations. Despite the pervasive forces of commerce, the Hudson River has retained its world-class scenic qualities. The Upper Hudson remains today a free-flowing, tumbling mountain stream, and the Lower Hudson a fjord penetrated and dominated by the Hudson Highlands. The Hudson's unique history continues to affect current uses and will surely influence the future in remarkable ways. Robert E. Henshaw received his Ph.D. in environmental physiology at the University of Iowa and worked for twenty years as an environmental analyst at the New York State Department of Environmental Conservation. He has taught in the Department of Geography and Planning at the University at Albany–SUNY, and is a member of the Board of Directors of the Hudson River Environmental Society. He lives in West Sand Lake, New York.

Political Street Art Holly Eva Ryan, 2016-12-08 Recent global events, including the 'Arab Spring' uprisings, Occupy movements and anti-austerity protests across Europe have renewed scholarly and public interest in collective action, protest strategies and activist subcultures. We know that social movements do not just contest and politicise culture, they create it too. However, scholars working within international politics and social movement studies have been relatively inattentive to the manifold political mediations of graffiti, muralism, street performance and other street art forms. Against this backdrop, this book explores the evolving political role of street art in Latin America during the twentieth and early twenty-first centuries. It examines the use, appropriation and reconfiguration of public spaces and political opportunities through street art forms, drawing on empirical work undertaken in Brazil, Bolivia and Argentina. Bringing together a range of insights from social movement studies, aesthetics and anthropology, the book highlights some of the difficulties in theorising and understanding the complex interplay between art and political practice. It seeks to explore 'what art can do' in protest, and in so doing, aims to provide a useful point of reference for students and scholars interested in political communication, culture and resistance. It will be of interest to students and scholars working in politics, international relations, political and cultural geography, Latin American studies, art, sociology and anthropology.
