**Online Security for the Business Traveler** Deborah Gonzalez, 2014-08-23 Whether attending conferences, visiting clients, or going to sales meetings, travel is an unavoidable necessity for many businesspeople. Today's high-tech enabled businessperson travels with electronic devices such as smartphones, tablets, laptops, health sensors, and Google Glass. Each of these devices offers new levels of productivity and efficiency, but they also become the weak link in the security chain: if a device is lost or stolen during travel, the resulting data breach can put the business in danger of physical, financial, and reputational loss. *Online Security for the Business Traveler* provides an overview of this often overlooked problem, explores cases highlighting specific security issues, and offers practical advice on what to do to ensure business security while traveling and engaging in online activity. It is an essential reference guide for any travelling business person or security professional. Chapters are organized by travel stages for easy reference, including planning, departure, arrival, and returning home. Touches on the latest technologies that today's business traveler is using. Uses case studies to highlight specific security issues and identify areas for improved risk mitigation.

Live versions of those links can be found at the website for the book, <http://www.preparetofly.co.uk/>. Skywings, the official magazine of the British Hanggliding and Paragliding Association, called the first edition very, very good indeed and ridiculously cheap, and concluded their review with Not simply recommended... but essential!. *Free Flight* James Fallows, 2008-11-05 The troubles of the airline system have become acute in the post-terrorist era. As the average cost of a flight has come down in the last twenty years, the airlines have survived by keeping planes full and funneling traffic through a centralized hub-and-spoke routing system. Virtually all of the technological innovation in airplanes in the last thirty years has been devoted to moving passengers more efficiently between major hubs. But what was left out of this equation was the convenience and flexibility of the average traveler. Now, because of heightened security, hours of waiting are tacked onto each trip. As James Fallows vividly explains, a technological revolution is under way that will relieve this problem. Free Flight features the stories of three groups who are inventing and building the future of all air travel: NASA, Cirrus Design in Duluth, Minnesota, and Eclipse Aviation in Albuquerque, New Mexico. These ventures should make it possible for more people to travel the way corporate executives have for years: in small jet planes, from the airport that's closest to their home or office directly to the airport closest to where they really

want to go. This will be possible because of a product now missing from the vast array of flying devices: small, radically inexpensive jet planes, as different from airliners as personal computers are from mainframes. And, as Fallows explains in a new preface, a system that avoids the congestion of the overloaded hub system will offer advantages in speed, convenience, and especially security in the new environment of air travel.
