Matthew David, Chris Murman

Adrian Frutiger - Typefaces Heidrun Osterer, Philipp Stamm, Swiss Foundation Type and Typography, 2009-01-01 The international creation of typefaces after 1950 was decisively influenced by the Swiss type designer Adrian Frutiger. His Univers typeface and the machine-readable font OCR-B, which was adopted as an ISO standard, are milestones, as is his type for the Paris airports, which set new standards for signage types and evolved into the Frutiger typeface. With his corporate types, he helped to define the public profiles of companies such as the Japanese Shiseido line of cosmetics. In all he created some fifty types, including Ondine, Méridien, Avenir, and Vectora. Based on conversations with Frutiger himself and on extensive research in France, England, Germany, and Switzerland, this publication provides a highly detailed and accurate account of the type designer's artistic development. For the first time, all of his types - from the design phase to the marketing stage - are illustrated and analyzed with reference to the technology and related types. Hitherto unpublished types that were never realized and more than one hundred logos complete the picture.

**Digital Fonts** Alec Julien, 2012 Significantly, this book is also the first of its kind to address the important issue of how designers can best market and sell their fonts, and includes advice on copy writing and working with foundries, as well as how designers can set up their own foundries.

**Designing Apps for Success** Matthew David, Chris Murman, 2014-02-03 In 2007, Apple released the iPhone. With this release came tools as revolutionary as the internet was to businesses and individuals back in the mid- and late-nineties: Apps. Much like websites drove (and still drive) business, so too do apps drive sales, efficiencies and communication between people. But also

like web design and development, in its early years and iterations, guidelines and best practices for apps are few and far between. Designing Apps for Success provides web/app designers and developers with consistent app design practices that result in timely, appropriate, and efficiently capable apps. This book covers application lifecycle management that designers and developers use when creating apps for themselves or the entities that hired them. From the early discussions with a company as to how to what kind of app they want, to storyboarding, to developing cross platform, to troubleshooting, to publishing, Designing Apps for Success gives a taut, concise, and pragmatic roadmap from the beginning of the process all the way to the end. Developers and designers will learn not only best practices on how to design an app but how to streamline the process while not losing any quality on the end result. Other topics in this book include: Case studies that best showcase the development process at work (or not at work). Global examples of apps developed all over the world. Future proofing your apps Post-publishing: Promoting and marketing your apps and keeping it relevant. Consistent app design practices for consistently successful results.

*Fun with Fonts* David E. Carter, 1997 For the first time, here's a typeface book that adds color graphics, showing imaginative applications for each fun font that's featured. This lighthearted reference has 170 fonts that range from whimsical to creepy -- but any similarity to other font books ends there. In this unique format, each typeface is displayed on a full page, with a color graphic showing an interesting use of the font. Included are lively words to support each graphic -- some amusing, some poignant. A helpful index

tells where all fonts in the book may be purchased.

*Choosing Fonts* Bruce Byfield, 2016-06 This book is an extract from a much larger book entitled *Designing with LibreOffice*. It is intended for those who only want information on choosing and using fonts with LibreOffice, the popular free-licensed office suite. It consists of Chapter 4 and Appendixes C & D in the larger book. Although the first published extract, this book will eventually become the second of five excerpts from the complete book. The excerpts will be: Part 1: Styles and Templates Part 2: Choosing Fonts Part 3: Character and Paragraph Styles Part 4: Page, Frame, and List Styles Part 5: Slide Shows, Diagrams, and Spreadsheets Together, the five smaller books will contain most, but not all the information from the larger book. Any changes are minimal, and made for continuity or changes in structure made necessary by the changes in format.

*Advances in Web Based Learning - ICWL 2008* Frederick Li, Jianmin Zhao, Rynson Lau, Qing Li, Denis McLeod, 2008-08-19 This year, we received about 170 submissions to ICWL 2008. There were a total of 52 full papers, representing an acceptance rate of about 30%, plus one invited paper accepted for inclusion in this LNCS proceedings. The authors of these accepted papers came from many different countries. We would like to thank all the reviewers for spending their precious time reviewing the papers and for providing valuable c-ments that aided significantly in the paper selection process. Authors of the best papers presented in this conference will be invited to submit

extended versions of their papers for possible publication in a special issue of IEEE Internet Computing. This was the second time that the ICWL conference was organized in China. It was particularly special this year to hold ICWL 2008 in China, as the Beijing 2008 Olympic Games were co-located in the same country during the conference period. We would like to especially thank our Organization Co-chair, Lanfang Miao, for spending an enormous amount of effort in coordinating the local arrangements. In fact, we would like to thank the entire conference Organizing Committee for their hard work in putting together the conference. In particular, we would like to express our appreciation to our Registration Chairs, Jiying (Jean) Wang and Lanfang Miao, and Treasurer Howard Leung for their tremendous efforts in communicating with the authors regarding registration matters and maintaining the registration lists up-to-date.

**The Geometry of Type** Stephen Coles, 2016-07-12 The Geometry of Type explores 100 traditional and modern typefaces in detail, with a full spread devoted to each entry. Characters from each typeface are enlarged and annotated to reveal key features, anatomical details, and the finer, often-overlooked elements of type design, which shows how these attributes affect mood and readability. Sidebar information lists the designer and foundry, the year of release and the different weights and styles available, while feature boxes explain the origins and best uses for each typeface, such as whether it is suitable for running text or as a display font for headlines. To help the reader spot each typeface in the wider world, the full character set is shown, and the best letters for identification are highlighted.

Font Technology Peter Karow, 2012-12-06 Computers have changed typography and prepress as well as printing. Typefaces are manufactured by digital punch

cutters with a PC, not any more by punch cutters. Typefaces are constructed an output by a new technology, the so-called fonttechnology. The book by Peter Karow covers the whole area of it. It offers various chapters about (among others) issues like intelligent font scaling, kerning, quality of type, legibility, and problems of different output devices. It is interesting to read about Gutenberg setting, the font market, optical scaling, and last but not least a hand on Kanjhi, the Chinese/Japanese Glyphs. Furthermore, Fonttechnology contains a number of valuable and instructive appendices. Almost everything one has to know about type and computers!
