Practical Intranet Development John Colby,Gareth Downes-Powell,Jeffrey Haas,Darren J. Harkness,Frank Pappas,Mike Parsons,Francis Storr,Inigo Surguy,Ruud Voigt,2013-11-11 An intranet can be a powerful tool. A well-designed intranet becomes the key resource and communications platform for your organization, used by members of staff as their first destination for information. In contrast, a poorly designed intranet will sit unused, accumulating useless information, and eating up IT budgets. So, how do you avoid this situation, and make sure you design the most useful, and usable, intranet? This book takes you through the steps you need to take to make an invaluable intranet, from identifying your users' needs and building an indispensable tool, to marketing the results. It guides you through the problems that may occur, passing on invaluable advice from people who have been through the process before. We start by setting the scene, giving an overview of what intranets are and how to justify it to your organization. We then give you a rundown of the main areas you'll need to think about when developing an intranet, covering browsers, development techniques, usability, content management, security, and internal marketing. Finally, we'll take a look at what to do when the Intranet moves beyond its original function, looking at remote access, extranets, and what to do when the Intranet gets too big.

The 2011 Guide to Free Or Nearly-Free E-Books ,2011 One of the problems which face all librarians adding e-books to their collections is that of bibliographic control: there is no legal deposit for e-books and consequently there is no single place from which new titles can be found. If this is true of commercially published e-books, it is most certainly also true of free e-books... and there are many thousands of free e-books available over the Internet, many of which are of a quality such that librarians might wish to have them in their collections. The 2011 Guide to Free or Nearly-Free e-Books is offered as a tool for librarians and others involved in book selection (e.g. teachers in schools) in all sectors - school, further and higher education, public and special libraries - to facilitate easy access to free e-books and e-book collections which can enhance their digital library.

Football Fans, Their Information, The Web and The Personal Home Page Shant Narsesian,2010-01-08 From the early days of the Internet to the present day, the World Wide Web has developed into one of the world's largest information resources. One of the first genres of web pages, which was also one of the first information resources, was the Personal Home Page (PHP). Over this same period of time, professional football in England has created the world's richest league and by extension an abundance of football-related PHPs. This book examines the role of the PHP as an information resource using the subject area of professional football in England. A holistic approach was taken so as to view the PHP in a broader context, as one information resource amongst many, including non-PHPs and even offline information resources (e.g. reference books). Within this study, football fans were interviewed along with web authors, surveys were carried out (by distributing both online and offline questionnaires) and additional research was also carried out online, examining football-related PHPs and online web collaborations. Results suggest that whilst there are many informational benefits to be found on PHPs, such as plentiful unique information, they have low levels of use amongst football fans. The study concludes by proposing an avenue to the maximisation of the informational benefit of PHPs through a blueprint for a type of communal football website called the Club Community Composite Page (CCCP). Overall, several contributions are made to the field of information science, most notably attaining an improved understanding of PHPs as unique and accurate information providers online and devising new research methods for PHP research. In particular, the method of identification of PHPs developed here will be a useful tool for future researchers of PHPs. The contributions of this work are likely to be of value to researchers working in relevant sub-fields of information science, such as information seeking, web genres, grey literature and virtual communities.
