Newt Gingrich

\$2.50 A Gallon Newt Gingrich, 2012-05-01 New York Times bestselling author, former Speaker of the House, and Fox News political analyst and Republican presidential candidate Newt Gingrich has a plan for slashing gas prices and reducing our long-term dependence on foreign oil. Gingrich is famous for taking big, visionary ideas and boiling them down into practical solutions for the American people and in his new book, *\$2.50 A Gallon: Why Obama Is Wrong and Cheap Gas Is Possible*, Gingrich tackles America's energy crisis. Dealing not only with spiraling gas prices, but with all aspects of energy policy, Gingrich shows how we can safely reap the benefits of America's own natural resources and technology in gas, oil, coal, wind, solar, biofuels and nuclear energy. Gingrich argues that the pinch Americans are feeling at the pump is not a blip in the economy but a looming crisis—affecting not only the price of gas, but the price of food, the strength of our economy, and our national security. To meet this crisis, Gingrich lays out a national strategy that will tap America's scientists, engineers, and entrepreneurs, and require Congress to unlock our oil reserves and remove all the impediments and disincentives that unnecessary government regulation has put in the way of American energy independence. The energy crisis is solvable, as Newt Gingrich's plan makes clear. His handbook, *\$2.50 A Gallon: Why Obama Is Wrong and Cheap Gas Is Possible*, is sure to become the talk of the presidential campaign season.

Clean Cheap Heat John H. Herbert, 1992-02-18 This work traces the development of residential natural gas markets in the United States from the beginning of the twentieth century to the present. It examines how social, economic, and technological factors interrelated to bring a relatively new energy source from obscurity to general acceptance by the population. The author credits the

appearance of particular appliances which helped spawn natural gas use, notes legislative developments such as the Natural Gas Act of 1938 and the Natural Gas Policy Act of 1978, and shows the various effects of regulation and price changes on the market. The author also demonstrates the use of a general method for performing a regression analysis when the historical data are poorly measured. This study will be of interest to energy economists, econometricians, and industry specialists, as well as economic and social historians.

Want Cheap Gas? Gregory Gebhart, 2012-04-12 Want Cheap Gas? is the complete rationale for using ethanol derived from starch and cellulose to lower gas prices. Already the US produces 15 billion gallons of starch bioethanol per year and by 2022 will be producing the same amount of cellulosic bioethanol. Mixing different amounts of ethanol with pure gasoline will yield E10, E13, and E85. E85 (85% ethanol and 15% gasoline) already sells for \$1.00 less per gallon than E10.

Beat High Gas Prices Now! Diane MacEachern, 2005 No one ever won a prize for spending the most money possible on gas. Our goal should be to spend the least amount of money, and use the least amount of fuel, to cover the distance we want to go, states MacEachern. If you're looking for ways to spend less money on gas but still get where you want to go, this handy guidebook offers dozens of easy-to-follow tips to help you beat the pump. Here's what you'll find inside: * How to make gas go farther when you drive to work or go shopping* Information to help you choose a new car if you want to trade in your current gas guzzler for a gas stretcher* Ways to use the Internet to find the cheapest gas in your neighborhood* What credit cards give you money back when you buy gas* How smart driving can save you \$50 every month at the pump* How to get a \$2,000 tax deduction when you buy a gas-saving hybrid vehicle* A fuel cost calculator so you can see exactly how much money you're spending on gas PLUS: Specific tips to help you save \$20, \$30, \$40 and even \$50 a month at

the pump.

Cheap and Clean Stephen Ansolabehere, David M. Konisky, 2016-10-07 How Americans make energy choices, why they think locally (not globally), and how this can shape U.S. energy and climate change policy. How do Americans think about energy? Is the debate over fossil fuels highly partisan and ideological? Does public opinion about fossil fuels and alternative energies divide along the fault between red states and blue states? And how much do concerns about climate change weigh on their opinions? In *Cheap and Clean*, Stephen Ansolabehere and David Konisky show that Americans are more pragmatic than ideological in their opinions about energy alternatives, more unified than divided about their main concerns, and more local than global in their approach to energy. Drawing on extensive surveys they designed and conducted over the course of a decade (in conjunction with MIT's Energy Initiative), Ansolabehere and Konisky report that beliefs about the costs and environmental harms associated with particular fuels drive public opinions about energy. People approach energy choices as consumers, and what is most important to them is simply that energy be cheap and clean. Most of us want energy at low economic cost and with little social cost (that is, minimal health risk from pollution). The authors also find that although environmental concerns weigh heavily in people's energy preferences, these concerns are local and not global. Worries about global warming are less pressing to most than worries about their own city's smog and toxic waste. With this in mind, Ansolabehere and Konisky argue for policies that target both local pollutants and carbon emissions (the main source of global warming). The local and immediate nature of people's energy concerns can be the starting point for a new approach to energy and climate change policy.

Cheap Enough? Vijay Gill, 2012 Discussion of the the potential for natural gas use as a transportation fuel in the trucking and rail freight industries.

Cheap Enough? Making the Switch From Diesel Fuel to Natural Gas--Executive Summary ,2012

This report explores the potential for expanded use of natural gas as a transportation fuel in Canada, particularly as an alternative to diesel for heavy-duty trucks.

Smart Energy Policy James M. Griffin, 2009-07-28 While everyone wants energy that is clean, cheap and secure these goals often conflict: traditional fossil fuels tend to be cheaper than alternative fuels, but they are hardly clean or secure. This is an accessible explanation of the issues as well as sensible proposals for a truly sustainable energy policy.

Hillbilly Biodiesel Cheap, Easy and Green Billy Bob Stromberg, Wm. Scott Stromberg, 2017-05-25
COOKING OIL FUEL AND SUPER GREEN WATER INJECTION FOR GAS OR DIESEL EXPLANATION FOR Y'ALL YANKEES A few years ago us hill folk noticed that lots of y'all Yankees were spending more money to run a diesel on biodiesel than it would cost to run it on diesel fuel, more or less. And y'all spent lots of time on it also. Then selfish yuppies started to lie and say that there is no longer any used cooking oil available so they could have it for themselves. And then the fanatics got involved and northern folk ended up a frettin and fussin and throwing good money after bad, to save money that was then wasted elsewhere. Gall darn, shucks and wee doggies, there is a better way and us hillbillies have it down pat. Y'all knowd that we must find the cheapest way to do everything 'cause them thar carpet baggers keep us broke as a cheap fishing line. Besides we got all that skill from building stills and we don't waste it. Long ago the engineers at Mercedes Benz done invented a way to run a diesel on cooking oil that is super cheap and easy so we done copied it and put it in this here book. And then we put lots O' other things in the book that help with gas mileage and with pollution

control. Diesels especially run dirty and pollute and we got the solution fer that too. In fact, every diesel needs special water injection to clean it up and we give out that info as well. And we do it the fastest and cheapest way (about \$25). And we also tell what y'all need to know about that rumor about running cars on the hydrogen and oxygen from water. Of all the methods ours is the greenest. Hell, we live in the woods so we want to keep our hills clean and green. We done put all this here hillbilly skill, and much more, on the INTERNET, complete with about ten million hillbilly jokes (and Yankee jokes) and the site went viral. But then some carpetbagger hacked us and took down the site. Well shucks, us hill folk ain't that easy to stop so we put everything from the book and the web site into this here book so y'all can learn about our secrets and meet our crew. Becky Sue is our head diesel mechanic whenever she's not entertaining rednecks in the hay loft and we think you'll love her down home wisdom. SERIOUSLY FOLKS WE HAVE THE CHEAPEST AND EASIEST WAY TO RUN ON COOKING OIL AND NEVER MIND OUR DOWN HOME HUMOR. WE GIVE YOU ALL OUR TRICKS PLUS THE WISDOM OF THE MERCEDES BENZ ENGINEERS THAT EVERYONE ELSE DONE FORGOT. ITS EASY AND VERY CHEAP, WE GUARANTEE IT. If you run a diesel or if you are serious about fixin pollution or about increasing gas mileage you can't afford not to buy this here book. You all ready know us hillbillies are the best mechanics so take advantage of us. We'll even let ya taste our white lighting if'n y'all come a visitin. And never mind our humor this here book is serious as a heart attack and ready to apply to your diesel or to improve your gas mileage. The Book includes everything from our web site plus our book and down home wisdom in that order so start reading. Then you can enlighten your friends as well. Here's how it all appeared on the net and then later the book we sent out. Be sue you read to the end so you can get all the green info. See y'all down on the farm. Come a visitin. We're a welcomin' All Go south from Chicago till all the cars are following at less than five foot . Turn off the

paved road by the barn where Cindy Lou was deflowered. Keep going till you get to where the old oak tree used to be. Go left at green slime pond. Don't worry about crazy ol Pappy Silas less he has his gun. At the end of that road turn back to the way ya came. We'll be the 2nd still on the right.

The Impact of Cheap Oil on Gas Markets Jim Jensen, Michael Kelly, 1990-01-01

\$20 Per Gallon Christopher Steiner, 2009-07-15 An extraordinarily insightful and thought-provoking look at how our society and culture are going to change, and change rapidly, as the price of gasoline, heating oil, and all other everyday consumer products that are derived from oil continue to escalate. Imagine an everyday world in which the price of gasoline (and oil) continues to go up, and up, and up. Think about the immediate impact that would have on our lives. Of course, everybody already knows how about gasoline has affected our driving habits. People can't wait to junk their gas-guzzling SUVs for a new Prius. But there are more, not-so-obvious changes on the horizon that Chris Steiner tracks brilliantly in this provocative work. Consider the following societal changes: people who own homes in far-off suburbs will soon realize that there's no longer any market for their houses (reason: nobody wants to live too far away because it's too expensive to commute to work). Telecommuting will begin to expand rapidly. Trains will become the mode of national transportation (as it used to be) as the price of flying becomes prohibitive. Families will begin to migrate southward as the price of heating northern homes in the winter is too pricey. Cheap everyday items that are comprised of plastic will go away because of the rising price to produce them (plastic is derived from oil). And this is just the beginning of a huge and overwhelming domino effect that our way of life will undergo in the years to come. Steiner, an engineer by training before turning to journalism, sees how this simple but constant rise in oil and gas prices will totally re-structure our lifestyle. But what may be surprising to readers is that all of these changes may not be negative - but actually will usher in

some new and very promising aspects of our society. Steiner will probe how the liberation of technology and innovation, triggered by climbing gas prices, will change our lives. The book may start as an alarmist's exercise.... but don't be misled. The future will be exhilarating.
