Biobased Smart Polyurethane Nanocomposites Niranjan Karak, 2017-08-15 Polyurethane nanocomposites present an attractive and sustainable way for designing smart materials that can be used in packaging, health and energy applications. Biobased Smart Polyurethane Nanocomposites brings together the most recent research in the field from the basic concepts through to their applications. Special emphasis is given to sustainable biodegradable polyurethane nanocomposites with hyperbranched architecture. The book introduces biobased polyurethanes and the nanomaterials that can be used as nanocomposites followed by the resulting polyurethane nanocomposites. The second part then explores important applications in paints and surface coatings, shape memory, self-healing, self-cleaning, biomaterials and packaging materials. Written by a leading expert on polyurethane nanocomposites, the book is a great introduction to this smart material and its applications.

Upper Necaxa Totonac Dictionary David Beck, 2011-07-27 The Upper Necaxa Totonac Dictionary represents to-date the most extensive collection of lexical material for any member of the Totonac-Tepehua family and the only such record for this previously-undescribed polysynthetic language, currently spoken in two principal dialects by some 3,400 people, mainly adults, in the Sierra Norte of Puebla State, Mexico. As well as a short grammatical sketch, the dictionary comprises 9,000 lexical entries, including numerous fixed expressions, idioms, and ideophones; each lexical entry is accompanied by part-of-speech information and phonetic transcriptions as well as, where appropriate, dialectal information, grammatical notes (including plurals and classifiers for nouns), literal morpheme-by-morpheme glosses, example sentences, and cross-references to derived forms and semantically-related words. The accompanying DVD includes additional illustrative sentences, audio recordings of headwords and examples, and interlinear glosses for many of the sentences included in lexical entries. This book is the first Totonacan dictionary to be structured for the academic linguist, with special attention paid to the morphological structure of words and the organization of the Totonacan lexicon. Glosses are constructed so as to reflect the underlying complement-structure of words, with careful indication of the number of arguments required by particular lexical items, and all verbs are classified by dynamicity and valency. This dictionary is of interest to linguists working on American indigenous languages, as well as those concerned with the structure of morphologically complex words and the role of derivation in the lexicon of polysynthetic languages. It is also of use to historical linguists and Mesoamericanists interested in the reconstruction of the pre-Columbian history and ethnogeography of Mexico.

Women and Media in the Middle East Nahed Eltantawy, 2017-10-02 The traditional image of the Middle Eastern woman, as portrayed by the Western media, has tended to be one of a woman oppressed by men and religion. Veiling intensifies this image of supposed powerlessness and imprisonment. However, the Arab Spring uprisings have introduced the West to women in the Middle East who do not conform to this stereotype, and have shown the Western media that Middle Eastern women cannot be categorized altogether as one oppressed, powerless group. This book investigates the diverse realities and complexities of women in the Middle East in terms of their relationship with media platforms old and new. Contributors offer a range of perspectives that discuss everything from media portrayals of the veil to women in film and television, from women's involvement as activists on the street to the role played in the Arab Spring by cyber activism. The collection provides insight into how some women in the Middle East are utilizing traditional as well as new media for purposes of self-expression, activism, and democratization, while also investigating media portrayals of women at home and in the West. This book was originally published as a special issue of Feminist Media Studies.

Ultrasound in Food Processing Mar Villamiel, José V. García-Pérez, Antonia Montilla, Juan A. Carcel, Jose Benedito, 2017-05-08 Part I: Fundamentals of ultrasound This part will cover the main basic principles of ultrasound generation and propagation and those phenomena related to low and high intensity ultrasound applications. The mechanisms involved in food analysis and process monitoring and in food process intensification will be shown. Part II: Low intensity ultrasound applications Low intensity ultrasound applications have been used for non-destructive food analysis as well as for process monitoring. Ultrasonic techniques, based on velocity, attenuation or frequency spectrum analysis, may be considered as rapid, simple, portable and suitable for on-line measurements. Although industrial applications of low-intensity ultrasound, such as meat carcass evaluation, have been used in the food industry for decades, this section will cover the most novel applications, which could be considered as highly relevant for future application in the food industry. Chapters addressing this issue will be divided into three subsections: (1) food control, (2) process monitoring, (3) new trends. Part III: High intensity ultrasound applications High intensity ultrasound application constitutes a way to intensify many food processes. However, the efficient generation and application of ultrasound is essential to achieving a successful effect. This part of the book will begin with a chapter dealing with the importance of the design of efficient ultrasonic application systems. The medium is essential to achieve efficient transmission, and for that reason the particular challenges of applying ultrasound in different media will be addressed. The next part of this section constitutes an up-to-date vision of the use of high intensity ultrasound in food processes. The chapters will be divided into four sections, according to the medium in which the ultrasound vibration is transmitted from the transducers to the product being treated. Thus, solid, liquid, supercritical and gas media have been used for ultrasound propagation. Previous books addressing ultrasonic applications in food processing have been based on the process itself, so chapters have been divided in mass and heat transport, microbial inactivation, etc. This new book will propose a revolutionary overview of ultrasonic applications based on (in the authors' opinion) the most relevant factor affecting the efficiency of ultrasound applications: the medium in which ultrasound is propagated. Depending on the medium, ultrasonic phenomena can be completely different, but it also affects the complexity of the ultrasonic generation, propagation and application. In addition, the effect of high intensity ultrasound on major components of food, such as proteins, carbohydrates and lipids will be also covered, since this type of information has not been deeply studied in previous books. Other aspects related to the challenges of food industry to incorporate ultrasound devices will be also considered. This point is also very important since, in the last few years, researchers have made huge efforts to integrate fully automated and efficient ultrasound systems to the food production lines but, in some cases, it was not satisfactory. In this sense, it is necessary to identify and review the main related problems to efficiently produce and transmit ultrasound, scale-up, reduce cost, save energy and guarantee the production of safe, healthy and high added value foods.

Ureases Rodrigo Ligabu Braun,Celia Regina R Da S Carlini,2024-02-16 Ureases: Foundations, Classes, and Applications provides a thorough, practical analysis of ureases—enzymes of growing relevance across a range of biotechnological applications and drug discovery. Unique in many aspects, ureases are one of the few enzymes to have nickel in their active sites. Ureases covers all aspects of this enzymatic class. Starting with foundational overview, the book discusses historical urease research and the current state, from basic biochemistry to the use of ureases as hallmarks in enzymology, crystallography, and bioinorganic chemistry. The different classes of ureases, structurally diverse but chemically equivalent, are individually discussed. The multi-protein, multi-step activation of ureases (with chemical modification of residues, transport, and transfer of nickel ions) are examined in-depth, along with the catalytic mechanisms of ureolysis and its inhibitors. The final two sections of the book address multiple applications of ureases in health and biotechnology, respectively, going from gastric ulcer treatment to architectural uses in buildings and engineering. Future applications and next steps in research are also considered. Considers fundamental aspects of urease biochemistry, ureolysis and urease inhibitors Discusses urease research across a range of applications, from drug discovery to biosensors, water purification, architecture and the food industry Features chapter contributions from international leaders in the field
