The One Device Brian Merchant, 2017-06-20 The secret history of the invention that changed everything-and became the most profitable product in the world. NATIONAL

BESTSELLERS Shortlisted for the Financial Times Business Book of the Year Award One of the Best Business Books of 2016 - CNBC, Bloomberg, 1-800-CEO-Read The One Device is a tour de force, with a fast-paced edge and heaps of analytical insight. -Ashlee Vance, New York Times bestselling author of Elon Musk A stunning book. You will never look at your iPhone the same way again. -Dan Lyons, New York Times bestselling author of Disrupted Odds are that as you read this, an iPhone is within reach. But before Steve Jobs introduced us to the one device, as he called it, a cell phone was merely what you used to make calls on the go. How did the iPhone transform our world and turn Apple into the most valuable company ever? Veteran technology journalist Brian Merchant reveals the inside story you won't hear from Cupertino-based on his exclusive interviews with the engineers, inventors, and developers who guided every stage of the iPhone's creation. This deep dive takes you from inside One Infinite Loop to 19th century France to WWII America, from the driest place on earth to a Kenyan pit of toxic e-waste, and even deep inside Shenzhen's notorious suicide factories. It's a firsthand look at how the cutting-edge tech that makes the world work—touch screens, motion trackers, and even AI—made their way into our pockets. The One Device is a roadmap for design and engineering genius, an anthropology of the modern age, and an unprecedented view into one of the most secretive companies in history. This is the untold account, ten years in the making, of the device that changed everything.

Dogfight Fred Vogelstein, 2013-11-12 Behind the bitter rivalry between Apple and Google—and how it's reshaping the way we think about technology The rise of smartphones and tablets has altered the industry of making computers. At the center of this change are Apple and Google, two companies whose philosophies, leaders, and commercial

acumen have steamrolled the competition. In the age of Android and the iPad, these corporations are locked in a feud that will play out not just in the mobile marketplace but in the courts and on screens around the world. Fred Vogelstein has reported on this rivalry for more than a decade and has rare access to its major players. In *Dogfight*, he takes us into the offices and board rooms where company dogma translates into ruthless business; behind outsize personalities like Steve Jobs, Apple's now-lionized CEO, and Eric Schmidt, Google's executive chairman; and inside the deals, lawsuits, and allegations that mold the way we communicate. Apple and Google are poaching each other's employees. They bid up the price of each other's acquisitions for spite, and they forge alliances with major players like Facebook and Microsoft in pursuit of market dominance. *Dogfight* reads like a novel: vivid nonfiction with never-before-heard details. This is more than a story about what devices will replace our cell phones and laptops. It's about who will control the content on those devices and where that content will come from—about the future of media and the Internet in Silicon Valley, New York, and Hollywood.

The Fourth Industrial Revolution Klaus

Schwab, 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human.

Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
