A History of America in 100 Maps Susan Schulten,2018-09-21 Throughout its history, America has been defined through maps. Whether made for military strategy or urban reform, to encourage settlement or to investigate disease, maps invest information with meaning by translating it into visual form. They capture what people knew, what they thought they knew, what they hoped for, and what they feared. As such they offer unrivaled windows onto the past. In this book Susan Schulten uses maps to explore five centuries of American history, from the voyages of European discovery to the digital age. With stunning visual clarity, *A History of America in 100 Maps* showcases the power of cartography to illuminate and complicate our understanding of the past. Gathered primarily from the British Library's incomparable archives and compiled into nine chronological chapters, these one hundred full-color maps range from the iconic to the unfamiliar. Each is discussed in terms of its specific features as well as its larger historical significance in a way that conveys a fresh perspective on the past. Some of these maps were made by established cartographers, while others were made by unknown individuals such as Cherokee tribal leaders, soldiers on the front, and the first generation of girls to be formally educated. Some were tools of statecraft and diplomacy, and others were instruments of social reform or even advertising and entertainment. But when considered together, they demonstrate the many ways that maps both reflect and influence historical change. Audacious in scope and charming in execution, this collection of

one hundred full-color maps offers an imaginative and visually engaging tour of American history that will show readers a new way of navigating their own worlds.

The History of Cartography, Volume 6 Mark Monmonier, 2015-05-18 For more than thirty years, the History of Cartography Project has charted the course for scholarship on cartography, bringing together research from a variety of disciplines on the creation, dissemination, and use of maps. Volume 6, *Cartography in the Twentieth Century*, continues this tradition with a groundbreaking survey of the century just ended and a new full-color, encyclopedic format. The twentieth century is a pivotal period in map history. The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps. Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps. Satellite positioning and mobile communications revolutionized wayfinding. Mapping evolved as an important tool for coping with complexity, organizing knowledge, and influencing public opinion in all parts of the globe and at all levels of society. Volume 6 covers these changes comprehensively, while thoroughly demonstrating the far-reaching effects of maps on science, technology, and society—and vice versa. The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images. Hundreds of expert contributors provide both original research, often based on their own participation in the developments they describe, and interpretations of larger trends in cartography. Designed for use by both scholars and the general public, this definitive volume is a reference work of first resort for all who study and love maps.

Aviation in the Digital Age Ruwantissa Abeyratne, 2020-06-25 All of the topics discussed in this book – from sovereignty to cybercrime, and from drones to the identification of passengers & privacy – are profoundly affected by algorithms; so are air traffic services and aeronautical communications. All of these aviation-related aspects are addressed in a 75-year-old treaty called the Chicago Convention and its Annexes, which, as this book argues, needs to be reviewed with a focus on its relevance and applicability in connection with Moore's Law, which posits that transistors in computer microchips double in speed, power and performance every two years, while the cost of computers is halved during the same period. Firstly, in terms of traditional territorial sovereignty, we have arrived at a point where there is a concept of data sovereignty and ownership that raises issues of privacy. Data transmission becomes ambivalent in terms of territorial sovereignty, and the Westphalian model may not be the perfect answer. Whether it be the manufacture of airplanes, the transfer of data on individuals, or the transmission of aeronautical and telecommunications information – all have to be carried out in accordance with the same fundamental principle: duty of care. Against the backdrop of the relevant provisions of the Chicago Convention

and its Annexes, the detailed analysis presented here covers key areas such as: megatrends; AI and international law in the digital age; blockchain and aviation; drones; aviation and telecommunications; aviation and the Internet; cybersecurity; and digital identification of passengers & privacy. In turn, the book suggests how we can best manage this transition.
